

Supplementary Figure S1

Supplementary Figure S1: Oncoprint including all sequenced genes in 28 LBCL patients with ocular adnexal involvement. Every row represents a specific gene or clinical/molecular characteristic, and every column represents a patient. The percentage of patients with alterations in the denoted gene is shown on the right side. The number of gene alterations per patient is shown at the top. Rearrangements of *MYC*, *BCL2*, and *BCL6* as well as disease category, cell-of-origin by Hans' classification, and LymphGen genetic subgrouping are shown at the bottom. Patients are sorted in the same order as Figure 2.

DLBCL: diffuse large B-cell lymphoma; GCB: germinal center B-cell; HGBCL: high-grade B-cell lymphomas with *MYC* and *BCL2* rearrangements; NA: Not available
