

Supplementary Figure S1. $CD4^+FoxP3^+TGF\text{-}\beta^+$ Treg cells induced by selected α-tubulin peptides. (a) Representative dot plot showing the percentage of $CD4^+FoxP3^+TGF\text{-}\beta^+$ cells in response to selected α-tubulin peptides and a peptide pool including all of them (αTBL pool) **(b)** Percentage of $CD4^+FoxP3^+TGF\text{-}\beta^+$ cells for each donor. The dotted horizontal line marks the threshold that was used for positive responses ($> mean_{Untreated} + 2 \times SD_{Untreated}$), each symbol represents a different donor and bars represent mean values (n=6).
