

# Codebook

Description of variables for the file "Final Snake Telemetry Data.csv."

Table S2. Codebook for Rattlesnake Telemetry Data.

Variable Name	Description
snakeID	Each snake's ID number
Type	The type of location recorded. Integers refer to a location fix on the snake. "Capture" refers to the snake's initial capture location. "Final_Release" refers to the location the snake was released to once it was captured at the end of the study and its transmitter was removed. "Last" refers to a few instances where snake remains were found but not all such locations are recorded. "Release" refers to places a snake was released after initial transmitter implantation or replacement. "Relocate" refers to places a snake was relocated to after it was found in an SHM area and subsequent to transmitter implantation.
Date	Date in 'month/day/year' format
Time	Local time for the record
Lat	Latitude
Long	Longitude
X	X value for UTM coordinates
Y	Y value for UTM coordinates
SHM.dist	Distance to nearest significantly modified human area
