5. Design and Construction of the CD for Evaluation of the Constructed Sensor

CD is constructed from three layers of PMMA bonded by two Pressure Sensitive Adhesive (PSA) layers. The CD is designed in computer aided drawing and cut by a CNC machine. The layers are bonded by applying a pressure activated PSA. The device has 20 chambers which have the same dimensions as the wells in a microtiter plate. The CD has a diameter of 130 mm and overall height of 16 mm. This CD is specifically designed for evaluation of the sensor.
