

Data Fusion of Two Hyperspectral Imaging Systems with  
Complementary Spectral Sensing Ranges for Blueberry Bruising  
Detection

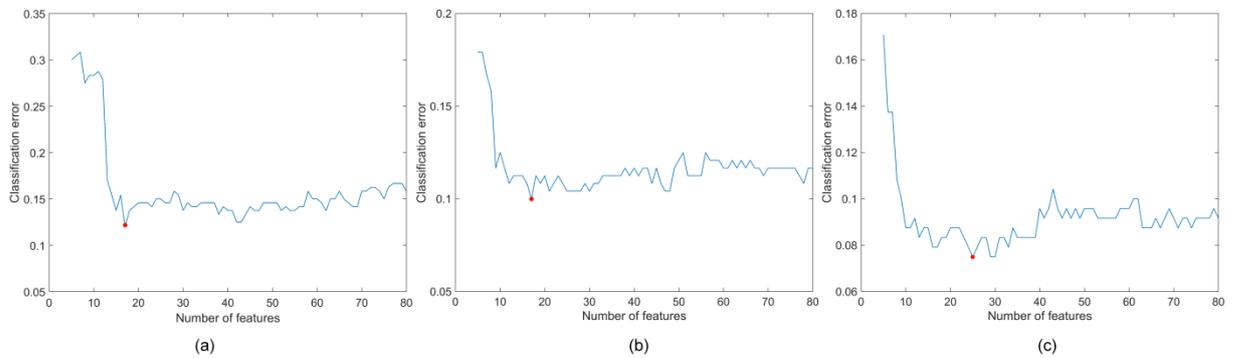

**Figure S1.** PLS-DA probability output.

**Figure S2.** False negative rate of stem, equator, and calyx bruise groups obtained by (a) PLS-DA and (b) SVM analysis based on the mean reflectance from push broom based and LCTF based HSI.

**Figure S3.** Mean reflectance of stem, equator, and calyx bruise collected by (a) push broom based and (b) LCTF based HSI.

**Figure S4.** The classification error of 10-fold cross validation calculated by the PLS-DA for the features generated by random frog from (a) push broom based and (b) LCTF based hyperspectral data, and (c) their fused data.

**Table S1.** Number of blueberries used in HSI experiment.

Variety	Calibration set		Prediction set	
	Control	Bruised	Control	Bruised
Bluecrop	60	60	40	160
Jersey	60	60	26	238
