Notes. ①: representativeness of the exposed cohort; ②: selection of the non-exposed cohort; ③: ascertainment of exposure; ④: demonstration that the outcome of interest was not present at the start of the study; ⑤: comparability of cohorts on the basis of the design or analysis; ⑥: assessment of the outcome; ⑦: was follow-up long enough for outcomes to occur?; ⑧: adequacy of follow-up of cohorts

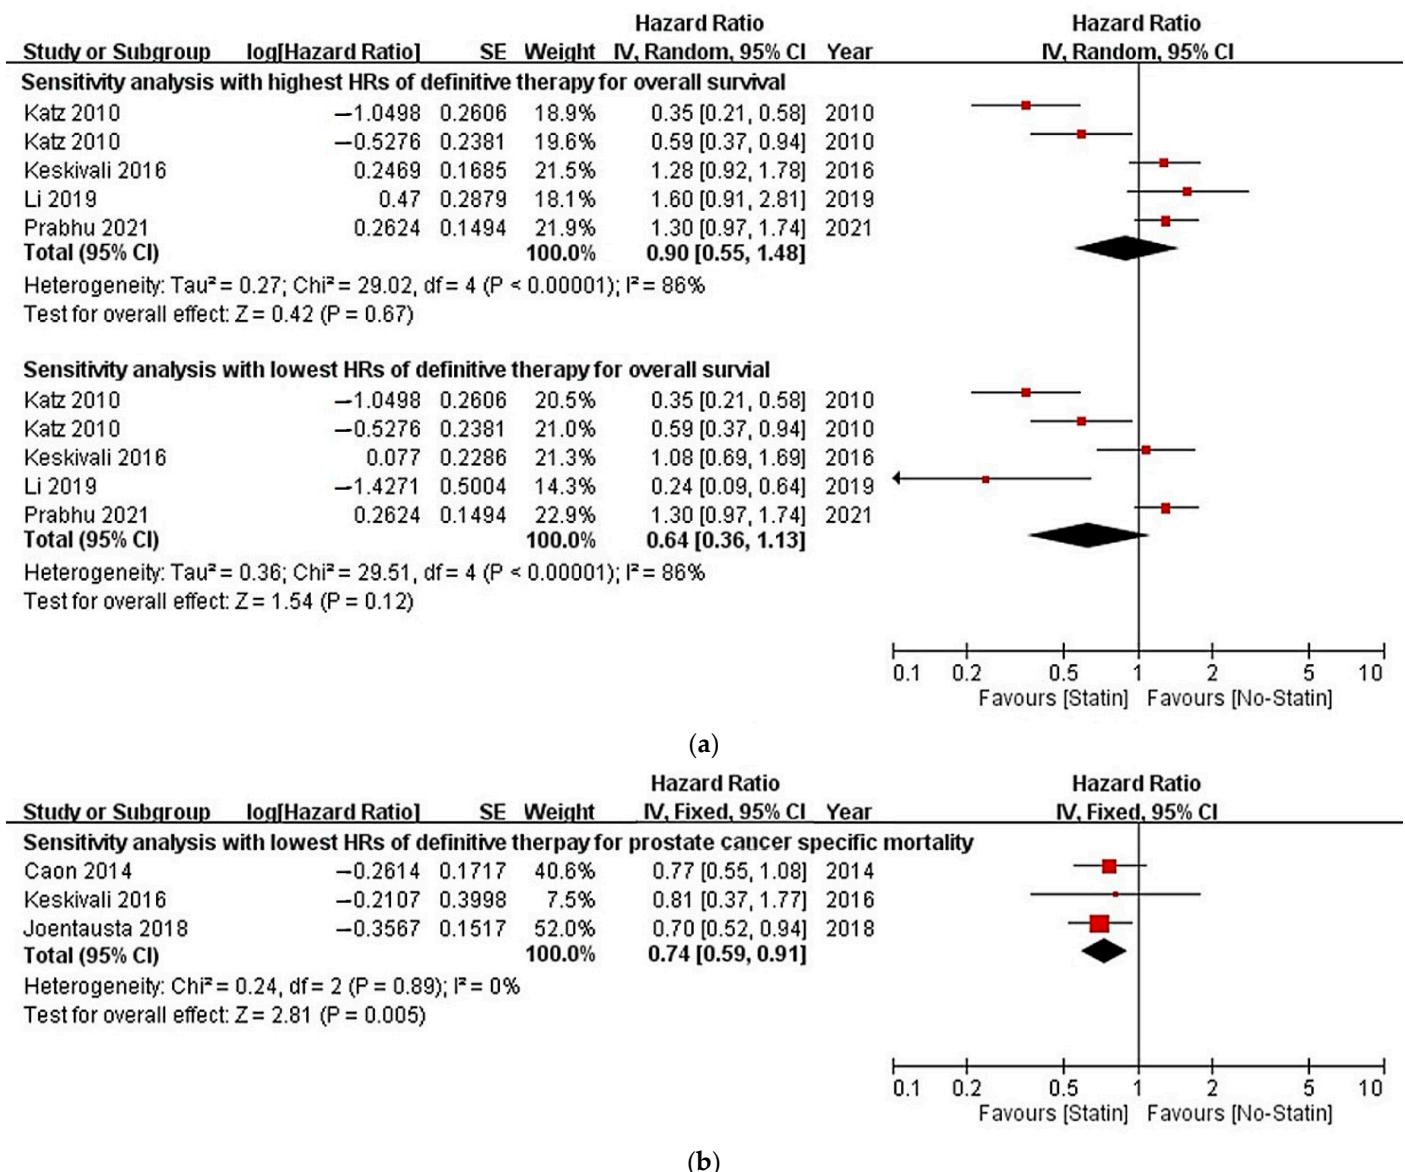

Figure S1. Sensitivity analysis of studies investigating the association between statin use with (a) **all-cause mortality** and (b) **prostate cancer (PCa)-specific mortality** of PCa patients receiving definitive therapy as their primary treatment.
