Activity

Inhibited the expression of Caspase-3
Inhibited the expression of Caspase-3
Promoted the expression of BDNF
Promoted the expression of BDNF
Attenuating the phosphorylation level of CaMKII and prevented OGD-induced apoptosis of hippocampal or SH-
Increase of GABA(A)R α1, GABA(A)R γ2 and KCC2 mRNA and protein levels
Increase of GABA(A)R α1, GABA(A)R γ2 and KCC2 mRNA and protein levels
Increase of GABA(A)R α1, GABA(A)R γ2 and KCC2 mRNA and protein levels
Increase of GABA(A)R α1, GABA(A)R γ2 and KCC2 mRNA and protein levels
Increase of GABA(A)R α1, GABA(A)R γ2 and KCC2 mRNA and protein levels
Increase of GABA(A)R α1, GABA(A)R γ2 and KCC2 mRNA and protein levels
Decrease of NKCC1 at mRNA and protein levels
Decrease of NKCC1 at mRNA and protein levels
Increase the release of PI3K,Akt via MAPK/ERK
Increase the release of PI3K,Akt via MAPK/ERK
Increased levels of BDNF
Enhancing BCL-2 and MCL-1 expression by triggering the CArG box
Enhancing BCL-2 and MCL-1 expression by triggering the CArG box
Enhancing BCL-2 and MCL-1 expression by triggering the CArG box
Enhancing BCL-2 and MCL-1 expression by triggering the CArG box
Suppressed NF-κB signaling by reducing IκBα phosphorylation and nuclear translocation of NF-κB/p65, which d
Suppressed NF-κB signaling by reducing IκBα phosphorylation and nuclear translocation of NF-κB/p65, which d
Suppressed NF-κB signaling by reducing IκBα phosphorylation and nuclear translocation of NF-κB/p65, which d
Increased the Bcl-2 expression
Reduced Bax and caspase-3 expression
Reduced Bax and caspase-3 expression
Increase expression of the PI3K, Akt, mTOR proteins
Increase expression of the PI3K, Akt, mTOR proteins
Increase expression of the PI3K, Akt, mTOR proteins
Enhanced expression of MAP-2, BDNF, NT-3 and IGF-1
Enhanced expression of MAP-2, BDNF, NT-3 and IGF-1
Enhanced expression of MAP-2, BDNF, NT-3 and IGF-1
Enhanced expression of MAP-2, BDNF, NT-3 and IGF-1
Suppressed expression of proinflammatory mediators (iNOS, TNF-α, and IL-1β) in in activated microglia/brain
Suppressed expression of proinflammatory mediators (iNOS, TNF-α, and IL-1β) in in activated microglia/brain
Suppressed expression of proinflammatory mediators (iNOS, TNF-α, and IL-1β) in in activated microglia/brain
Decreased expression of proinflammatory markers in AM/BM through suppressing the p-JNK and p-p38 MAPK
Decreased expression of proinflammatory markers in AM/BM through suppressing the p-JNK and p-p38 MAPK
Inhibited LPS-induced production of proinflammatory mediators such as NO, TNFα, IL-1β and ROS
Inhibited LPS-induced production of proinflammatory mediators such as NO, TNFα, IL-1β and ROS
Inhibited LPS-induced production of proinflammatory mediators such as NO, TNFα, IL-1β and ROS
Inhibited LPS-induced production of proinflammatory mediators such as NO, TNFα, IL-1β and ROS
Inhibited LPS-induced production of proinflammatory mediators such as NO, TNFα, IL-1β and ROS
Inhibited LPS-induced production of proinflammatory mediators such as NO, TNFα, IL-1β and ROS
Inhibited LPS-induced production of proinflammatory mediators such as NO, TNFα, IL-1β and ROS
Inhibited LPS-induced production of proinflammatory mediators such as NO, TNFα, IL-1β and ROS

Decrease the contents of glutamic acid (Glu), aspartic acid (Asp), glycine (Gly), γ-aminobutyric acid (GABA) and
Decrease the contents of glutamic acid (Glu), aspartic acid (Asp), glycine (Gly), γ-aminobutyric acid (GABA) and
Decrease the contents of glutamic acid (Glu), aspartic acid (Asp), glycine (Gly), γ-aminobutyric acid (GABA) and
Decrease the contents of glutamic acid (Glu), aspartic acid (Asp), glycine (Gly), γ-aminobutyric acid (GABA) and
Decrease the contents of glutamic acid (Glu), aspartic acid (Asp), glycine (Gly), γ-aminobutyric acid (GABA) and
Reduced LDH and Caspase 3 level
Reduced LDH and Caspase 3 level
Increase eNOS phosphorylation and inhibit iNOS expression in response to the activated Akt
MCAO-induced brain infarction was decreased by vitexin
Increase protein levels of antigen identified by monoclonal antibody (Ki-67) and Bcl-2
Increase protein levels of antigen identified by monoclonal antibody (Ki-67) and Bcl-2
Decrease protein levels of Caspase-3 and Bax, antigen identified by monoclonal antibody (Ki-67) and Bcl-2 in M
Decrease protein levels of Caspase-3 and Bax, antigen identified by monoclonal antibody (Ki-67) and Bcl-2 in M
Increased IL-10 production to ameliorate MCAO-induced inflammation
Attenuated the secretion of pro-inflammatory cytokine IL-6 and TNF-a to ameliorate MCAO-induced inflammat
Attenuated the secretion of pro-inflammatory cytokine IL-6 and TNF-a to ameliorate MCAO-induced inflammat
Enhancive expression of Ulk1 and inhibited the reduced expression of mTOR and PPAR-γ
Enhancive expression of Ulk1 and inhibited the reduced expression of mTOR and PPAR-γ
Enhancive expression of Ulk1 and inhibited the reduced expression of mTOR and PPAR-γ
Upregulated mRNA expression of Caspase-3 in the HBMVEC + KD group compared with the HBMVEC + NC grou
Attenuated expression of Bcl-2, Caveolin-1-KD in the HBMVEC and HBMVEC + NC groups
Attenuated expression of Bcl-2, Caveolin-1-KD in the HBMVEC and HBMVEC + NC groups
Reduced volume of cerebral infarction while prompting vascular endothelial cell proliferation by upregulating V
Reduced volume of cerebral infarction while prompting vascular endothelial cell proliferation by upregulating V
The acetylated H3 and acetylated H4 expressions and Syn-I expressions in the hippocampus was upregulated
The acetylated H3 and acetylated H4 expressions and Syn-I expressions in the hippocampus was upregulated
The acetylated H3 and acetylated H4 expressions and Syn-I expressions in the hippocampus was upregulated
The HDAC content was decreased
The BDNF level was markedly increased
Inhibited IL-1β and TGF-β1 protein expression
Inhibited IL-1β and TGF-β1 protein expression
Improved the neurological dysfunction and decreased infarct volume in MCAO rats.
Reduce the protein levels of IL-1β and TGF-β1
Reduce the protein levels of IL-1β and TGF-β1
Up-regulated PPARα and PPARγ protein levels and suppressed IκB-α degradation and NF-κB activation induced
Up-regulated PPARα and PPARγ protein levels and suppressed IκB-α degradation and NF-κB activation induced
Reduce the the expression of IL-1 β, IL-6, TNF-α, XBP1u, XBP1s and caspase-3
Reduce the the expression of IL-1 β, IL-6, TNF-α, XBP1u, XBP1s and caspase-3
Reduce the the expression of IL-1 β, IL-6, TNF-α, XBP1u, XBP1s and caspase-3
Reduce the the expression of IL-1 β, IL-6, TNF-α, XBP1u, XBP1s and caspase-3
Reduce the the expression of IL-1 β, IL-6, TNF-α, XBP1u, XBP1s and caspase-3
Reduce the the expression of IL-1 β, IL-6, TNF-α, XBP1u, XBP1s and caspase-3
Reduce the the expression of IL-1 β, IL-6, TNF-α, XBP1u, XBP1s and caspase-3
Reduce the the expression of IL-1 β, IL-6, TNF-α, XBP1u, XBP1s and caspase-3
Reduce the the expression of IL-1 β, IL-6, TNF-α, XBP1u, XBP1s and caspase-3
Reduce the the expression of IL-1 β, IL-6, TNF-α, XBP1u, XBP1s and caspase-3

Reduce the the expression of IL-1 β, IL-6, TNF-α, XBP1u, XBP1s and caspase-3
Reduce the the expression of IL-1 β, IL-6, TNF-α, XBP1u, XBP1s and caspase-3
Reduce the overexpression of p-IRE1α related with ER stress and apoptosis
Reduce the overexpression of p-IRE1α related with ER stress and apoptosis
Icariin enhanced the effect of therapeutic hypothermia on infarct and neurological deficits in MCAO rats
Downregulated the expressions of TNF-α, IL-6, C-Caspase 3 and Bax, and the activation of PPARs/Nrf2/NF-κB a
Downregulated the expressions of TNF-α, IL-6, C-Caspase 3 and Bax, and the activation of PPARs/Nrf2/NF-κB a
Downregulated the expressions of TNF-α, IL-6, C-Caspase 3 and Bax, and the activation of PPARs/Nrf2/NF-κB a
Downregulated the expressions of TNF-α, IL-6, C-Caspase 3 and Bax, and the activation of PPARs/Nrf2/NF-κB a
Downregulated the expressions of TNF-α, IL-6, C-Caspase 3 and Bax, and the activation of PPARs/Nrf2/NF-κB a
Downregulated the expressions of TNF-α, IL-6, C-Caspase 3 and Bax, and the activation of PPARs/Nrf2/NF-κB a
Downregulated the expressions of TNF-α, IL-6, C-Caspase 3 and Bax, and the activation of PPARs/Nrf2/NF-κB a
Downregulated the expressions of TNF-α, IL-6, C-Caspase 3 and Bax, and the activation of PPARs/Nrf2/NF-κB a
Elevated the expression of Bcl-2
quercetin administration attenuated the permanent middle cerebral artery occlusion (pMCAO)-induced increa
Quercetin treatment attenuated the increase of caspase-3
Quercetin treatment attenuated the increase of caspase-3
Lower degree of infarct volume, and brain water content than the vehicle-treated rats
Decreased the ROS and MDA production, and increased the activity of SOD and CAT in brains of MCAO/R rats
Decreased the ROS and MDA production, and increased the activity of SOD and CAT in brains of MCAO/R rats
Downregulation of cleaved caspase-3 protein
Upregulation of Bcl-2 protein level
Ameliorated neurologic deficit and infarct volume after cerebral ischemia reperfusion
Inhibit the expression of 4-Hydroxy-2-nonenal (4-HNE).
Increased the cerebral expression of BDNF/TrkB,
Increased the cerebral expression of BDNF/TrkB,
Decreased infarct volume and brain edema, and ameliorated neurological scores
Upregulated the expression of p62, NBR1 and Bcl-2
Upregulated the expression of p62, NBR1 and Bcl-2
Upregulated the expression of p62, NBR1 and Bcl-2
Downregulated the level of TNF-α.
treatment of XN improved MCAO-induced brain injury by reducing infarct size, improving neurological deficits
Ameliorated glutamate concentration elevation, and CA3 neuron death
Decrease of mitochondrial fusion protein Mfn-2 and antiapoptotic protein Bcl-2 expression
Decrease of mitochondrial fusion protein Mfn-2 and antiapoptotic protein Bcl-2 expression
Inhibition of Apaf-1 expression and caspase-3 activation
Attenuated the neurological deficit score, brain water content and infarct area
Decreased serum TNF-α, IL-1β and IL-6 concentrations
Decreased serum TNF-α, IL-1β and IL-6 concentrations
Decreased serum TNF-α, IL-1β and IL-6 concentrations
Decrease levels of ACSL4 and TFR1 in the cortex that attenuates ferroptosis
Decrease levels of ACSL4 and TFR1 in the cortex that attenuates ferroptosis
Stimulated expression PGC-1α and TFAM that are responsible for mitochondrial biogenesis mitochondrial and
Stimulated expression PGC-1α and TFAM that are responsible for mitochondrial biogenesis mitochondrial and
Upregulated Akt activation by and suppressed cleaved caspase-3 expression.
Upregulation of PI3K, p55γ mRNA in vitro and in vivo

Upregulation of PI3K, p55γ mRNA in vitro and in vivo
Infarct volume decreased, decreased brain edema and contributed to the restoration of motor function
Downregulation of pro-inflammatory cytokines (TNFα and IL-6)
Downregulation of pro-inflammatory cytokines (TNFα and IL-6)
Upregulation anti-inflammatory cytokines (IL-1β)
Minimal detection of CD68-positive activated macrophages/microglia
Upregulated Akt and ERK phosphorylation, and attenuated neutrophil migration, endothelium adhesion, spont
Upregulated Akt and ERK phosphorylation, and attenuated neutrophil migration, endothelium adhesion, spont
Reducing volume of infarction, neuronal loss and water content
The nNOS expression in cortex and dentate gyrus was reduced
Increased levels of NO, p-Akt/Akt, and p-eNOS/eNOS
Increased levels of NO, p-Akt/Akt, and p-eNOS/eNOS
Increased levels of NO, p-Akt/Akt, and p-eNOS/eNOS
Increased levels of NO, p-Akt/Akt, and p-eNOS/eNOS
Increased levels of NO, p-Akt/Akt, and p-eNOS/eNOS
Increased Bcl-2 expression
Increased Bcl-2 expression
Reduced Bax expression in the penumbra
Reduced Bax expression in the penumbra
Enhanced the expression of Bcl-2
Attenuated the content of Bax, cleaved caspase-3, and PARP
Attenuated the content of Bax, cleaved caspase-3, and PARP
Attenuated the content of Bax, cleaved caspase-3, and PARP
Brain water content increase, cerebral blood flow decrease, cerebral infarction and neurological deficits decre
Inhibits the expression of MMP-2/9 and Src/MLCK/MLC signaling pathway to attenuated BBB injury.
Inhibits the expression of MMP-2/9 and Src/MLCK/MLC signaling pathway to attenuated BBB injury.
Increased mitochondrial respiration, prevented mitochondrial dysfunction by the increased the expression of M
Decreased protein levels of TLR4, p-p38, and IL1
Decreased protein levels of TLR4, p-p38, and IL1
Decreased protein levels of TLR4, p-p38, and IL1
Upregulating p-Akt and p-mTOR expression
Upregulating p-Akt and p-mTOR expression
Attenuated neurological deficits, reduced cerebral infarction area and lowered brain water content
Reduced the epression of IL-1β and IL-8 and enhanced the expression of p-JAK2 and p-STAT3
Reduced the epression of IL-1β and IL-8 and enhanced the expression of p-JAK2 and p-STAT3
Reduced the epression of IL-1β and IL-8 and enhanced the expression of p-JAK2 and p-STAT3
Reduced the epression of IL-1β and IL-8 and enhanced the expression of p-JAK2 and p-STAT3
Upregulation of flotillin-1 protein level wich decrease cell death, LDH release and caspase-3 activation
Upregulation of flotillin-1 protein level wich decrease cell death, LDH release and caspase-3 activation
Upregulation of flotillin-1 protein level wich decrease cell death, LDH release and caspase-3 activation
Reduced infarct volume, improved neurological function, alleviated the morphological damage of neurons, and
Increased Bcl-2 protein levels
Decreased Bax and caspase-3 expressions in mouse N2a cells
Decreased Bax and caspase-3 expressions in mouse N2a cells
Decreased the expression of LC3 II and HIF-1α
Decreased the expression of LC3 II and HIF-1α

Exhibited substantial reductions in neurological score and infarct area
Upregulated expression of the mitochondrial biogenesis regulators NRF-1 and TFAM
Upregulated expression of the mitochondrial biogenesis regulators NRF-1 and TFAM
Upregulated expression of the mitochondrial biogenesis regulators NRF-1 and TFAM
Upregulated expression of the mitochondrial biogenesis regulators NRF-1 and TFAM
Reduced astroglial and microglial activation associated with a decrease in cd11b immunoreactivity
Attenuated NF-κB levels and JNK activation; Pretreatment for 7 days before I/R decreased iNOS and COX-2 exp
Attenuated NF-κB levels and JNK activation; Pretreatment for 7 days before I/R decreased iNOS and COX-2 exp
Attenuated NF-κB levels and JNK activation; Pretreatment for 7 days before I/R decreased iNOS and COX-2 exp
Attenuated NF-κB levels and JNK activation; Pretreatment for 7 days before I/R decreased iNOS and COX-2 exp
Reduced the cerebral ischemia reperfusion damage, brain edema, and Evans blue dye extravasation
Downregulated MMP-9 expression
Upregulated TIMP-1 expression
Reduced cerebral infarct volume, decreased brain water content, and improved neurological scores
Upregulates Sirt1 expression and enhence autophagy activity
Reduce expression of protein levels of activated NLRP3 inflammasome (caspase-1, IL-1β, and IL-18)
Reduce expression of protein levels of activated NLRP3 inflammasome (caspase-1, IL-1β, and IL-18)
Reduce expression of protein levels of activated NLRP3 inflammasome (caspase-1, IL-1β, and IL-18)
Decreased expression of inflammatory cytokines including interleukin (IL)-1β, interleukin (IL)-6 and tumor necr
Decreased expression of inflammatory cytokines including interleukin (IL)-1β, interleukin (IL)-6 and tumor necr
Decreased expression of inflammatory cytokines including interleukin (IL)-1β, interleukin (IL)-6 and tumor necr
Reduced phosphorylation of p38, MAPK and Iba1 expression
Reduced phosphorylation of p38, MAPK and Iba1 expression
Reduced phosphorylation of p38, MAPK and Iba1 expression
Increase ilevels of Bax
Decreased levels of Bcl-2
Attenuated the upregulation of NR2B expression, a subunit of N-methyl-D-aspartate receptors and inhibited Ca
Reduced cerebral infarction and improved neurological function after cerebral ischemia
Reduced the expression of M1 microglia/macrophage markers (IL-1β, IL-6, TNF-α, IFN-γ)
Reduced the expression of M1 microglia/macrophage markers (IL-1β, IL-6, TNF-α, IFN-γ)
Reduced the expression of M1 microglia/macrophage markers (IL-1β, IL-6, TNF-α, IFN-γ)
Reduced the expression of M1 microglia/macrophage markers (IL-1β, IL-6, TNF-α, IFN-γ)
Increased the expression of M2 microglia/macrophage markers after stroke (IL-10, TGFβ)
Increased the expression of M2 microglia/macrophage markers after stroke (IL-10, TGFβ)
Reduced the secretion of the pro-inflammatory cytokines, IL-1β, IL-2, IL-6, IL-8, and TNFα in M1 microglia
Reduced the secretion of the pro-inflammatory cytokines, IL-1β, IL-2, IL-6, IL-8, and TNFα in M1 microglia
Reduced the secretion of the pro-inflammatory cytokines, IL-1β, IL-2, IL-6, IL-8, and TNFα in M1 microglia
Reduced the secretion of the pro-inflammatory cytokines, IL-1β, IL-2, IL-6, IL-8, and TNFα in M1 microglia
Reduced the secretion of the pro-inflammatory cytokines, IL-1β, IL-2, IL-6, IL-8, and TNFα in M1 microglia
Increased viability, inhibited lactate dehydrogenase (LDH) release, and reduced apoptosis in OGD/R-induced BV
Reduce levels of TNF-α, IL-6 and IL-8
Reduce levels of TNF-α, IL-6 and IL-8
Reduce levels of TNF-α, IL-6 and IL-8
Reduce NFκB p50 subunit, IL-6, and TNFα expression
Reduce NFκB p50 subunit, IL-6, and TNFα expression
Reduce NFκB p50 subunit, IL-6, and TNFα expression

Increase NeuN expression
Decreased levels of NLRP3, ASC, cleaved- caspase-1 and IL-1β, and decreased the expression of P62
Decreased levels of NLRP3, ASC, cleaved- caspase-1 and IL-1β, and decreased the expression of P62
Decreased levels of NLRP3, ASC, cleaved- caspase-1 and IL-1β, and decreased the expression of P62
Decreased levels of NLRP3, ASC, cleaved- caspase-1 and IL-1β, and decreased the expression of P62
Decreased levels of NLRP3, ASC, cleaved- caspase-1 and IL-1β, and decreased the expression of P62
protected the tMCAO animals against vascular remodelling and controled hemorhragic lesion
Medium and high doses of geniposide attenuated oxidative stress insult and improved iLTP
Increased the activity superoxide dismutase (SOD) and decresed malondialdehyde (MDA) content and plasma l
Increased the activity superoxide dismutase (SOD) and decresed malondialdehyde (MDA) content and plasma l
Increased the activity superoxide dismutase (SOD) and decresed malondialdehyde (MDA) content and plasma l
Down-regulate the expressions of TLR4, NFkappaB and TNFalpha
Down-regulate the expressions of TLR4, NFkappaB and TNFalpha
Down-regulate the expressions of TLR4, NFkappaB and TNFalpha
Inhibit caspase-3 expression and reduce PARP degradation after cerebral ischemic
Decrease levels of pMEK1/2, pERK1/2, and COX2 downregulated expression
Decrease levels of pMEK1/2, pERK1/2, and COX2 downregulated expression
Decrease levels of pMEK1/2, pERK1/2, and COX2 downregulated expression
Decrease levels of pMEK1/2, pERK1/2, and COX2 downregulated expression
Decrease levels of pMEK1/2, pERK1/2, and COX2 downregulated expression
Decrease levels of pMEK1/2, pERK1/2, and COX2 downregulated expression
Decrease levels of pMEK1/2, pERK1/2, and COX2 downregulated expression
Decrease levels of pMEK1/2, pERK1/2, and COX2 downregulated expression
Decrease levels of pMEK1/2, pERK1/2, and COX2 downregulated expression
Decrease levels of pMEK1/2, pERK1/2, and COX2 downregulated expression
Decrease the cerebral infarction volume
Reduce ROS contents, protect the structure of mitochondria, and down-regulate the expression of CytC and Ca
Reduce ROS contents, protect the structure of mitochondria, and down-regulate the expression of CytC and Ca
Reduce ROS contents, protect the structure of mitochondria, and down-regulate the expression of CytC and Ca
Increased the expression of p-ERK1/2 and p-JNK
Increased the expression of p-ERK1/2 and p-JNK
Increased the expression of p-ERK1/2 and p-JNK
Reduced IL-1 beta epression
Increase SOD activity and decrease MDA content in serum and spinal cord tissue
Increase SOD activity and decrease MDA content in serum and spinal cord tissue
Increase survivin protein expression and decrease neuronal apoptosis
Improved neurological outcome and reduced infarct volume
Decreasing the percentage of CD11b/CD18-positive neutrophils and down-regulating the expression of interce
Reduced the expression of toll-like receptor-4 (TLR4) and its downstream adaptor proteins (MyD88, TRIF and T
Inhibited the mRNA upregulation of Fas, FasL, Caspase-8, and Bax/Bcl-2
Inhibited the mRNA upregulation of Fas, FasL, Caspase-8, and Bax/Bcl-2
Inhibited the mRNA upregulation of Fas, FasL, Caspase-8, and Bax/Bcl-2
Inhibited the mRNA upregulation of Fas, FasL, Caspase-8, and Bax/Bcl-2
Inhibited the mRNA upregulation of Fas, FasL, Caspase-8, and Bax/Bcl-2
Increase protein level of apoptosis cytokines Caspase-8, Bid, cleaved Caspase-3 and Cyto C
Increase protein level of apoptosis cytokines Caspase-8, Bid, cleaved Caspase-3 and Cyto C

Increase protein level of apoptosis cytokines Caspase-8, Bid, cleaved Caspase-3 and Cyto C
Increase protein level of apoptosis cytokines Caspase-8, Bid, cleaved Caspase-3 and Cyto C
Reduced the cerebral infarct volume and the neurological deficit score
Reduced the protein levels of NLRP3, Caspase-1, IL-1β, GSDMD, and GSDMD-N, inhibiting NLRP3 inflammasom
Reduced the protein levels of NLRP3, Caspase-1, IL-1β, GSDMD, and GSDMD-N, inhibiting NLRP3 inflammasom
Reduced the protein levels of NLRP3, Caspase-1, IL-1β, GSDMD, and GSDMD-N, inhibiting NLRP3 inflammasom
Reduced the protein levels of NLRP3, Caspase-1, IL-1β, GSDMD, and GSDMD-N, inhibiting NLRP3 inflammasom
Reduced the protein levels of NLRP3, Caspase-1, IL-1β, GSDMD, and GSDMD-N, inhibiting NLRP3 inflammasom
Reduce the severity of neurological deficits, infarct volumes, cerebral edema, and neuronal death
Reduce the level of cleaved caspase-3 and Increase the Bcl-2/Bax ratio
Reduce the level of cleaved caspase-3 and Increase the Bcl-2/Bax ratio
Reduce the level of cleaved caspase-3 and Increase the Bcl-2/Bax ratio
Reduces NOX2 and iNOS expression by impairing PI3K/AKT-dependent NF- κB and HIF-1 α activation
Reduces NOX2 and iNOS expression by impairing PI3K/AKT-dependent NF- κB and HIF-1 α activation
Induced CEC apoptosis and caspase-3 activation
Increased Nrf2-HO-1 expression through p38 MAPK regulation
Decreased the expression of GFAP
Increased the expression of NeuN
Decreased the levels of pro-inflammatory cytokines (IL-1β, IL-6 and TNF-α)
Decreased the levels of pro-inflammatory cytokines (IL-1β, IL-6 and TNF-α)
Decreased the levels of pro-inflammatory cytokines (IL-1β, IL-6 and TNF-α)
Reduced infarct volume, ameliorated the neurological deficit and the permeability of BBB
Decresed the content of IL-6, IL-1beta in serum and TNF-alpha
Decresed the content of IL-6, IL-1beta in serum and TNF-alpha
Decresed the content of IL-6, IL-1beta in serum and TNF-alpha
Upregulated the protein levels of HO-1, Nqo1, SOD, p-Akt, p-Nrf2, SOD, and Nrf2
The infarct volume ratios in MCAO rats were dramatically decreased by GB in a dose-dependent
Upregulated the protein levels of HO-1, Nqo1, SOD, p-Akt, p-Nrf2, SOD, and Nrf2
Upregulated the protein levels of HO-1, Nqo1, SOD, p-Akt, p-Nrf2, SOD, and Nrf3
Upregulated the protein levels of HO-1, Nqo1, SOD, p-Akt, p-Nrf2, SOD, and Nrf4
Upregulated the protein levels of HO-1, Nqo1, SOD, p-Akt, p-Nrf2, SOD, and Nrf5
Upregulated the protein levels of HO-1, Nqo1, SOD, p-Akt, p-Nrf2, SOD, and Nrf6
Upregulated the protein levels of HO-1, Nqo1, SOD, p-Akt, p-Nrf2, SOD, and Nrf7
Decreased rat neurological deficit scores, reduced brain infarct volume
Reduced the ratio of Bax/Bcl-2 in the I/R group
Reduced the ratio of Bax/Bcl-2 in the I/R group
Reduced infarct size and brain edema, improved neurological deficit score and inhibit platelet aggregation and
Decreasing lactate dehydrogenase (LDH) activity, and inhibiting IL-1β and TNF-α releasing associated with the c
Decreasing lactate dehydrogenase (LDH) activity, and inhibiting IL-1β and TNF-α releasing associated with the c
Decreasing lactate dehydrogenase (LDH) activity, and inhibiting IL-1β and TNF-α releasing associated with the c
Reduced the brain infarct and edema, attenuated the neuro-behavioral dysfunction, and improved cell morpho
Decreased expression of bcl-2, and bax via activating PI3K/Akt signaling pathway
Decreased expression of bcl-2, and bax via activating PI3K/Akt signaling pathway
Inhibits overproduction of ROS and iNOS/NO and decreased TNF-alpha levels
Inhibits overproduction of ROS and iNOS/NO and decreased TNF-alpha levels
Inhibits overproduction of ROS and iNOS/NO and decreased TNF-alpha levels

Inhibits overproduction of ROS and iNOS/NO and decreased TNF-alpha levels
Increased serum VEGF levels and decreased serum TNF-α levels
Increased serum VEGF levels and decreased serum TNF-α levels
Ameliorated neurological deficits
Reducing the Bax/Bcl-2 ratio
Reducing the Bax/Bcl-2 ratio
Reducing the Bax/Bcl-2 ratio
Reducing the Bax/Bcl-2 ratio
Reduce the gene and protein levels of Apaf-1, Bad and Caspase-3 and increase the expression of Bcl-2
Reduce the gene and protein levels of Apaf-1, Bad and Caspase-3 and increase the expression of Bcl-2
Reduce the gene and protein levels of Apaf-1, Bad and Caspase-3 and increase the expression of Bcl-2
Increase the expression of Bcl-2
Reduce the gene and protein levels of Apaf-1, Bad and Caspase-3 and increase the expression of Bcl-2
Reduce the gene and protein levels of Apaf-1, Bad and Caspase-3 and increase the expression of Bcl-2
Reduce the gene and protein levels of Apaf-1, Bad and Caspase-3 and increase the expression of Bcl-2
Increase the expression of Bcl-2
Improved neurological deficits, infarct volume, and brain edema
Reduced the cleaved Caspase-3 level but enhanced the phosphorylation of Akt, BAD and mTOR
Enhanced the expression of BDNF and CREB significantly
Enhanced the expression of BDNF and CREB significantly
Exposure of glutamate-treated cells to emodin induced an increase in the level of Bcl-2 expression
Increase in the level of Bcl-2 expression
Reduce expression of Bax and active caspase-3 proteins
Reduced infarct volume and cell death
Reduced reactive oxygen species (ROS) production and glutamate release
Increased glutamate transporter-1 (GLT-l) expression and reduce glutamate release
Increased Bcl-2 expression
Prevent postischemic neuronal degeneration and brain slice injury
Decrease the extracellular level of glutamate and aspartate significantly
Decrease the extracellular level of glutamate and aspartate significantly
Decrease the level of malondialdehyde (MDA) and Increase the activity of superoxide dismutase (SOD)
Inhibit expression of matrix metalloproteinase-3(MMP-3)
Prevented the reduction on adenosine A1 receptor level caused by ischemia
Ameliorated long-term neurological deficits and reduced neuronal tissue loss
Ihibited microglia/macrophage pro-inflammatory polarization by downregulated of CD16/Iba1
Ihibited microglia/macrophage pro-inflammatory polarization by downregulated of CD16/Iba1
Inhibits the expression of inflammatory mediators (TNF-α, IL-1β, and CCL3) and suppressed the activities of MM
Inhibits the expression of inflammatory mediators (TNF-α, IL-1β, and CCL3) and suppressed the activities of MM
Inhibits the expression of inflammatory mediators (TNF-α, IL-1β, and CCL3) and suppressed the activities of MM
Reduced the neurological deficits and infarct volume
Decreased the levels of inflammation-associated cytokines IL-1β, IL-6, myeloperoxidase (MPO), and TNF-α
Decreased the levels of inflammation-associated cytokines IL-1β, IL-6, myeloperoxidase (MPO), and TNF-α
Decreased the levels of inflammation-associated cytokines IL-1β, IL-6, myeloperoxidase (MPO), and TNF-α
Decreased the levels of inflammation-associated cytokines IL-1β, IL-6, myeloperoxidase (MPO), and TNF-α
Decreased the levels of oxidative stress-related proteins (MDA and SOD)
Decreased the levels of oxidative stress-related proteins (MDA and SOD)

Decreased the levels of apoptosis-related proteins (p-53, Bax, and B-cell lymphoma (Bcl)-2)
Decreased the levels of apoptosis-related proteins (p-53, Bax, and B-cell lymphoma (Bcl)-2)
Decreased the levels of apoptosis-related proteins (p-53, Bax, and B-cell lymphoma (Bcl)-2)
Reduce oxidative stress indicators (dihydroethidium, 8-hydroxyguanine and 4-hydroxy-2-nonenal) and antioxid
Reduce oxidative stress indicators (dihydroethidium, 8-hydroxyguanine and 4-hydroxy-2-nonenal) and antioxid
Reduce oxidative stress indicators (dihydroethidium, 8-hydroxyguanine and 4-hydroxy-2-nonenal) and antioxid
Reduce oxidative stress indicators (dihydroethidium, 8-hydroxyguanine and 4-hydroxy-2-nonenal) and antioxid
Reduce oxidative stress indicators (dihydroethidium, 8-hydroxyguanine and 4-hydroxy-2-nonenal) and antioxid
Inhibited activations of astrocytes and microglia (GFAP) in the ischemic CA1 area
Reduced the increased 4-hydroxy-2-noneal and superoxide anion radical production and increased expressions
Reduced the increased 4-hydroxy-2-noneal and superoxide anion radical production and increased expressions
Reduced the increased 4-hydroxy-2-noneal and superoxide anion radical production and increased expressions
Reduced the increased 4-hydroxy-2-noneal and superoxide anion radical production and increased expressions
Attenuated ischemia-induced memory deficits
Increased BDNF levels and attenuated hippocampal CA1 neurodegeneration and
Reduced brain infarct volume) and lessened the extent of histological damage
Decrease in hippocampal neurodegeneration
Prevented the cognitive and emotional impairments
Decreases hippocampal neuroinflammation by downregulated Iba-1 (microglia) and GFAP (astrocytes)
Decreases hippocampal neuroinflammation by downregulated Iba-1 (microglia) and GFAP (astrocytes)
Inrease in the hippocampal brain derived neurotrophic factor (BDNF) protein levels
Reduced the infarction area, neurological deficit score
Reduced protein expression of iNOS and COX-2, and attenuated inhibition of p53 protein
Reduced protein expression of iNOS and COX-2, and attenuated inhibition of p53 protein
Reduced protein expression of iNOS and COX-2, and attenuated inhibition of p53 protein
Reduced protein expression of iNOS and COX-2, and attenuated inhibition of p53 protein
Reduced protein expression of iNOS and COX-2, and attenuated inhibition of p53 protein
Reduced protein expression of iNOS and COX-2, and attenuated inhibition of p53 protein
Reduced mRNA expression of iNOS, COX-2, and TNFα.
Reduced mRNA expression of iNOS, COX-2, and TNFα.
Reduced mRNA expression of iNOS, COX-2, and TNFα.

Target	Protein level
Caspase-3	Decrease protein leves
Caspase-3	-
BDNF	Increase Preotein levels
BDNF	-
CaMKII	Decrease protein leves
GABA(A)R α1	Increase Preotein levels
GABA(A)R γ2	Increase Preotein levels
KCC2	Increase Preotein levels
GABA(A)R α1	-
GABA(A)R γ2	-
KCC2	-
NKCC1	Decrease protein leves
NKCC1	-
PI3K	Increase Preotein levels
Akt	Increase Preotein levels
BDNF	Increase Preotein levels
BCL-2	Increase Preotein levels
MCL-1	Increase Preotein levels
MCL-1	-
MCL-1	-
IL-6	Decrease protein leves
IL-18	Decrease protein leves
TNF-α	Decrease protein leves
BCL-2	Increase Preotein levels
Bax	Decrease protein leves
Caspase-3	Decrease protein leves
PI3K	Increase Preotein levels
Akt	Increase Preotein levels
mTOR	Increase Preotein levels
MAP-2	Increase Preotein levels
BDNF	Increase Preotein levels
NT-3	Increase Preotein levels
IGF-1	Increase Preotein levels
iNOS	Decrease protein leves
TNF-α	Decrease protein leves
IL-1β	Decrease protein leves
p-JNK	Decrease protein leves
p-p38	Decrease protein leves
NO	Decrease protein leves
TNF-α	Decrease protein leves
IL-1β	Decrease protein leves
ROS	Decrease protein leves
NO	-
