

Supplementary Figure S2. There is no significant difference in the number of CD3-positive T cells between WT and MAP3K19-deficient. Lung tissues from mice were removed and were stained with anti-CD3 antibody. Scale bars: 20 μm (upper panels), 100 μm (lower panels). Graph showing the percentage of CD3-positive T cells in each lung section. Data represent the means \pm SD ($n = 6$ mice per group). * $p < 0.05$. Abbreviations: MAP3K19: Mitogen-Activated Protein Kinase Kinase Kinase 19; SD: standard deviation.
