

Supplementary Figure S1. Antisteatosis assay of different extracts (30 $\mu\text{g}/\text{ml}$, 10 $\mu\text{g}/\text{ml}$) in fattenend liver cells (HepG2 cell line). Nile red (NR) fluorescence indicating neutral lipid content of cells; sulforhodamine B (SRB), viability test. Cells were overloaded with sodium oleate at 62 μM .

Supplementary Figure S2. Glucose uptake assay of different extracts (30 $\mu\text{g}/\text{ml}$, 10 $\mu\text{g}/\text{ml}$) using 2NBDG incorporation in HepG2 cells.

Supplementary Figure S3. Bioassay with marine fouling bacteria using different extracts at 3 µg/ml and 30 µg/ml.

Supplementary Table S1. Identified compounds from molecular networking with GNPS, based on LC-MS/MS data (positive mode) obtained from different extracts (HL, EL, ML, HS, ES, MS). A color code highlights some compounds with known function related to the studied bioactivities (yellow: cytotoxicity; blue: obesity; green: biofouling).
