

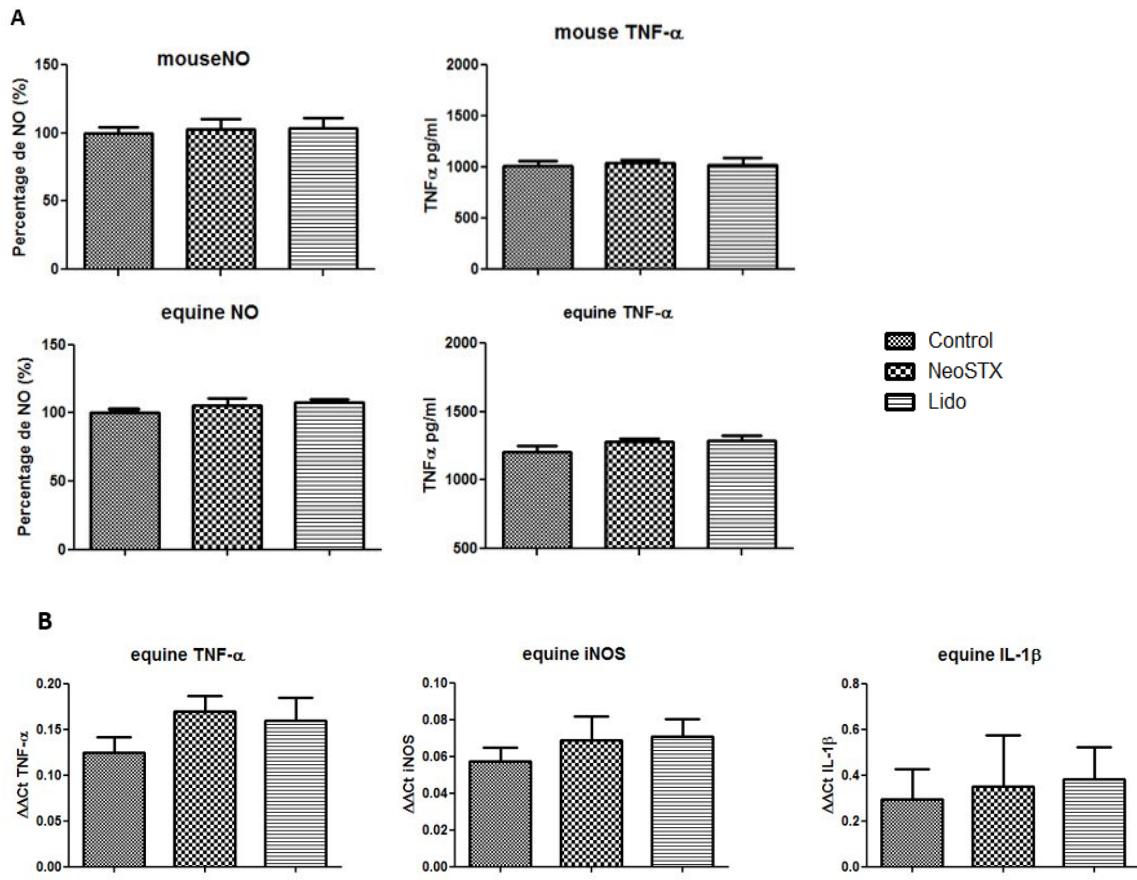

**Figure S1.- Figure 2. Characterization of the Nav Isoforms in a macrophage model. (A)** Expression of Navs in primary culture. RT-PCR product for isoforms of Nav 1.1, 1.2, 1.3, 1.8 and 1.9 in equine PBMC (Mφ). Positive control (Brain and Dorsal Root Ganglion (DRG)) and negative control (Liver) are shown.

**Figure S2.- Effect of NeoSTX and Lidocaine on RAW 264.7 cells and primary culture.** (A) Cells were cultured in the presence of NeoSTX (1 $\mu$ M) or lidocaine (20 $\mu$ g/ml) for 24 hours. The production of NO and TNF- $\alpha$  in the culture supernatant was quantified using the Griess technique and ELISA technique respectively. (B) The expression of the equineTNF- $\alpha$ , equineiNOS, and equineIL-1 $\beta$  mRNA was quantified by RT-PCR (C).  $\beta$ -Actin was used as a control gene. \* p <0.05 (n = 4).

**Table 1.- Primers for the Nav isoforms (1.1 to 1.9) described for the equine species.**

PREDICTED: Equus caballus sodium channel	Forward	Reverse	Product Length (pb)
Nav 1.1 (SCN1A) <a href="#">XM_001916693.4</a>	TGGCTATGCCATTGAGAACAGA	GAACTCAACTGGAGGCTTCCGAT	208
Nav 1.2 (SCN2A) <a href="#">XM_014732515.1</a>	GACTGTCCCATTGCTGTTGGAGA	TGTGAAACAGGCTTCAGGTTCGAG	208
Nav 1.3 (SCN3A) <a href="#">XM_014732264.1</a>	CTCTAATCGGTCTGCAGCTGTTCA	TCGTGTAGCCATAGTTGGGTTTC	204
Nav 1.4 (SCN4A) <a href="#">XM_005597271.2</a>	TGAGCAAGATGTATGCCGTGAGA	TTGATGCAGCCTGCTAGACAAGAG	201
Nav 1.5 (SCN5A) <a href="#">NM_001163895.1</a>	ATGTGCACCATTGACCAACT	TGCCATGACAATCACGCTGAAG	203
Nav 1.6 (SCN7A) <a href="#">XM_014732516.1</a>	AAGACTGTCAACTCCCACGATG	GCTCACCAATGCCAGAACAGGTA	210
