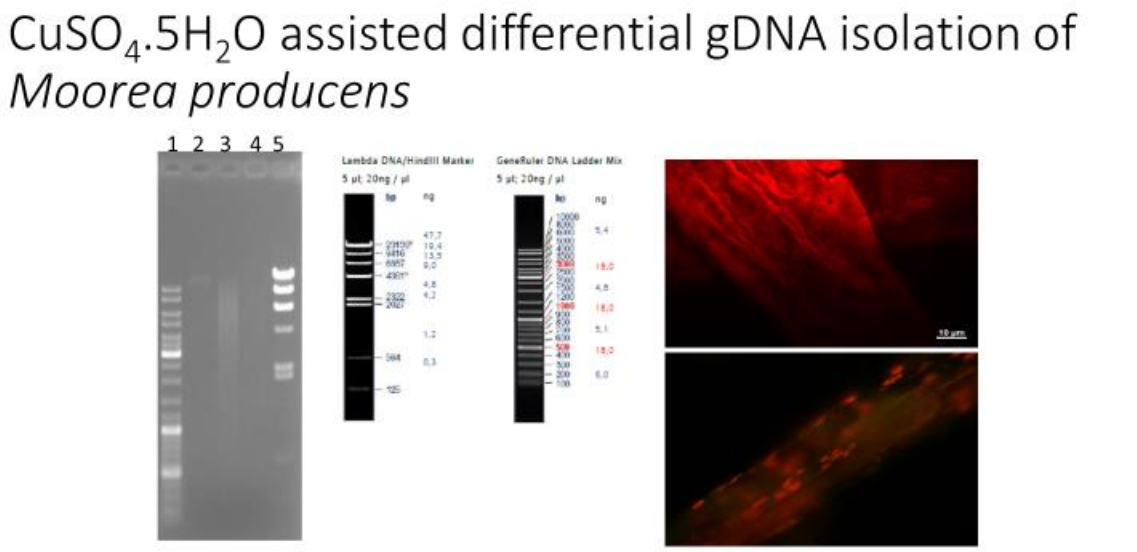
SUPPORTING INFORMATION (SI)

SI Figure S1 Denaturation of *Moorea producens* DNA



Lane 1: Gene ruler DNA ladder mix; **Lane 2:** *M. producens* treated with $CuSO_4.5H_2O$ for 30 min**; Lane 3 and Lane 4** *M. producens* treated with $CuSO_4.5H_2O$ for 90 min and 180 min respectively; **Lane 5:** Lambda DNA/Hind III marker. Top right – image of *M. producens* filament treated with $CuSO_4.5H_2O$ for 30 min. Bottom right – image of a dying *M. producens* filament. Photos taken by the author using a Leica DMIRB inverted microscope

SI Figure S2. **Blasted sequences**
