Distance to source (km)

0.0

Note

Clicking on one link in the contextual menu of a main scope (Samplings, Oligo and MicroArray) brings to the relative resource (e.g. water use or water type).

Usually the resource appears like a drop-down box where you can select a choice.

The list of available values for the resource can be extended using the dedicated page.

All resources have these pages:

1. Page for listing the elements
2. Page to create a new element
3. Page to modify an existing element.

For example the geographical position ("geo") resource.
