Arsenic phenotype was adjusted for arsenobetaine before conversion to percentage of arsenic species. When indicated as 'NA', the model did not converge due to number of covariates and small sample size.

Table S4. Model Results for monomethylarsonate (MMA%).

Arsenic phenotype was adjusted for arsenobetaine before conversion to percentage of arsenic species. When indicated as 'NA', the model did not converge due to number of covariates and small sample size.

Table S6. Model Results for arsenic principal component 1 (PC1).
