**Table S1:** Modified PRISMA checklist according to Moher et al. 2009 [22]

Section/topic	Item No.	Checklist item	Section	Page
<b>TITLE</b>				
Title	1	Identify the report as a systematic review, meta-analysis, or both.	Title page	1
<b>ABSTRACT</b>				
Structured summary	2	Provide a structured summary including, as applicable: background; objectives; data sources; study eligibility criteria, participants, and interventions; study appraisal and synthesis methods; results; limitations; conclusions and implications of key findings; systematic review registration number.	Abstract	1
<b>INTRODUCTION</b>				
Rationale	3	Describe the rationale for the review in the context of what is already known.	Introduction	1-4
Objectives	4	Provide an explicit statement of questions being addressed with reference to participants, interventions, comparisons, outcomes, and study design (PICOS).	Not provided	-
<b>METHODS</b>				
Protocol and registration	5	Indicate if a review protocol exists, if and where it can be accessed (e.g., Web address), and, if available, provide registration information including registration number.	Not provided	-
Eligibility criteria	6	Specify study characteristics (e.g., PICOS, length of follow-up) and report characteristics (e.g., years considered, language, publication status) used as criteria for eligibility, giving rationale.	Methods	5
Information sources	7	Describe all information sources (e.g., databases with dates of coverage, contact with study authors to identify additional studies) in the search and date last searched.	Methods	4-5
Search	8	Present full electronic search strategy for at least one database, including any limits used, such that it could be repeated.	Supplementary Material	S2, S3
Study selection	9	State the process for selecting studies (i.e., screening, eligibility, included in systematic review, and, if applicable, included in the meta-analysis).	Results	6
Data collection process	10	Describe method of data extraction from reports (e.g., piloted forms, independently, in duplicate) and any processes for obtaining and confirming data from investigators.	Methods	6
Data items	11	List and define all variables for which data were sought (e.g., PICOS, funding sources) and any assumptions and simplifications made.	Methods and Supplementary Material	6, S5
Risk of bias in individual studies	12	Describe methods used for assessing risk of bias of individual studies (including specification of whether this was done at the study or outcome level), and how this information is to be used in any data	Not provided	-

**Table S1: Modified PRISMA checklist according to Moher et al. 2009 [22]**

		synthesis.		
Summary measures	13	State the principal summary measures (e.g., risk ratio, difference in means).	Not provided	-
Synthesis of results	14	Describe the methods of handling data and combining results of studies, if done, including measures of consistency (e.g., $I^2$ ) for each meta-analysis.	Methods	6
Risk of bias across studies	15	Specify any assessment of risk of bias that may affect the cumulative evidence (e.g., publication bias, selective reporting within studies).	Not provided	-
Additional analyses	16	Describe methods of additional analyses (e.g., sensitivity or subgroup analyses, meta-regression), if done, indicating which were pre-specified.	Not provided	-
<b>RESULTS</b>				
Study selection	17	Give numbers of studies screened, assessed for eligibility, and included in the review, with reasons for exclusions at each stage, ideally with a flow diagram.	Results	7
Study characteristics	18	For each study, present characteristics for which data were extracted (e.g., study size, PICOS, follow-up period) and provide the citations.	Results and Supplementary Material	8, S5
Risk of bias within studies	19	Present data on risk of bias of each study and, if available, any outcome level assessment (see item 12).	Not provided	-
Results of individual studies	20	For all outcomes considered (benefits or harms), present, for each study: (a) simple summary data for each intervention group (b) effect estimates and confidence intervals, ideally with a forest plot.	Not provided	-
Synthesis of results	21	Present results of each meta-analysis done, including confidence intervals and measures of consistency.	Not provided	-
Risk of bias across studies	22	Present results of any assessment of risk of bias across studies (see Item 15).	Not provided	-
Additional analysis	23	Give results of additional analyses, if done (e.g., sensitivity or subgroup analyses, meta-regression [see Item 16]).	Not provided	
<b>DISCUSSION</b>				
Summary of evidence	24	Summarize the main findings including the strength of evidence for each main outcome; consider their relevance to key groups (e.g., healthcare providers, users, and policy makers).	Discussion	14-17
Limitations	25	Discuss limitations at study and outcome levels (e.g., risk of bias), and at review-level (e.g., incomplete retrieval of identified research, reporting bias).	Discussion	17

**Table S1:** Modified PRISMA checklist according to Moher et al. 2009 [22]

Conclusions	26	Provide a general interpretation of the results in the context of other evidence, and implications for future research.	Discussion and Conclusion	17-18
<b>FUNDING</b>				
Funding	27	Describe sources of funding for the systematic review and other support (e.g., supply of data); role of funders for the systematic review.	Funding	18

**Table S4: Quality appraisal items**

<b>Questions for the quality appraisal of cross-sectional studies (SURE criteria for cross-sectional studies, version 2018)</b>	
<b>No.</b>	<b>Items</b>
1	Is the study design clearly stated?
2	Does the study address a clearly focused question? Consider: Population; Exposure (defined and accurately measured?); Outcomes.
3	Are the setting, locations and relevant dates provided? Consider: recruitment period; exposure; data collection.
4	Were participants fairly selected? Consider: eligibility criteria; sources & selection of participants.
5	Are participant characteristics provided? Consider if: sufficient details; a table is included.
6	Are the measures of exposures & outcomes appropriate? Consider if the methods of assessment are valid & reliable.
7	Is there a description of how the study size was arrived at?
8	Are the statistical methods well described? Consider: How missing data was handled; were potential sources of bias (confounding factors) considered/controlled for.
9	Is information provided on participant eligibility? Consider if following provided: number potentially eligible, confirmed eligible, entered into study
10	Are the results well described? Consider if: effect sizes, confidence intervals/standard deviations provided; the conclusions are the same in the abstract and the full text.
11	Is any sponsorship/conflict of interest reported?
12	Finally: Did the authors identify any limitations and, if so, are they captured above?
<b>Questions for the quality appraisal of cohort studies (SURE criteria for cohort studies, version 2018)</b>	
<b>No.</b>	<b>Items</b>
1	Is the study design clearly stated?
2	Does the study address a clearly focused question? Consider: Population; Exposure (defined and accurately measured?); Comparator/Control; Outcomes.
3	Are the setting, locations and relevant dates provided? Consider: recruitment period; exposure; follow-up & data collection.
4	Were participants fairly selected? Consider: eligibility criteria; sources & selection of participants; method of follow-up; for matched studies – details of matching criteria and number of exposed or unexposed.
5	Are participant characteristics provided? Consider if: sufficient details; a baseline table is included.
6	Are the measures of exposures & outcomes appropriate? Consider if the methods of assessment are valid & reliable.
7	Was bias considered? e.g. recall or selection bias
8	Is there a description of how the study size was arrived at?

**Table S4: Quality appraisal items**

9	Are the statistical methods well described? Consider: How missing data was handled; were potential sources of bias (confounding factors) controlled for; How loss to follow-up was addressed.
10	Is information provided on participant flow? Consider if following provided: flow diagram; numbers of participants at each stage; details of drop-outs; details of missing participant data; follow-up time summarised; numbers of outcome events.
11	Are the results well described? Consider if: effect sizes, confidence intervals/standard deviations provided; the conclusions are the same in the abstract and the full text.
12	Is any sponsorship/conflict of interest reported?
13	Finally...Did the authors identify any limitations and, if so, are they captured above?
<b>Questions for the quality appraisal of mixed-methods studies (Mixed Methods Appraisal Tool (MMAT), version 2018)</b>	
<b>No.</b>	<b>Items</b>
1	Is there an adequate rationale for using a mixed methods design to address the research question?
2	Are the different components of the study effectively integrated to answer the research question?
3	Are the outputs of the integration of qualitative and quantitative components adequately interpreted?.
4	Are divergences and inconsistencies between quantitative and qualitative results adequately addressed?
5	Do the different components of the study adhere to the quality criteria of each tradition of the methods involved?

**Table S5:** Overview of the study characteristics and mapping the clusters according to Cornelissen et al. [5]

Author and year of publication	Workplace / sector	Country	Design and data collection methods	Sample (n=)	Assessment of variables	Mapping to the criteria according to Cornelissen et al. 2017	Quality rating (Percentage of checklist met)
Aljabri et al. 2020	Hospital sector	United States of America	Cross-sectional study: self report questionnaire, injury reports	23,599 employees across 1,805 work units	<ul style="list-style-type: none"> <li>– Safety climate: Everyone takes responsibility for complying with safety rules, supervisor responds quickly when safety problems are discovered</li> <li>– Injury reports: Employee injuries, illnesses, days missed from work, and days restricted to other duties</li> <li>– Covariates: Work unit, age, gender, total number of employees, average length of service for employees and supervisors, job titles, job tasks and functions (direct patient care versus no direct care)</li> </ul>	(1) Workplace characteristics and circumstances Total number of employees, Work unit, job titles, job tasks and functions (direct patient care versus no direct care) (3) Management and colleagues Supervisor responds quickly when safety problems are discovered (4) Employee characteristics Age, gender, average length of service for employees and supervisors (6) Performance Everyone takes responsibility for complying with safety rules (7) Safety outcomes Employee injuries, illnesses, days missed from work, and days restricted to other duties	69.2%
Beus et al. 2010	Chemical processing and manufacturing sector	Not specified (19 countries)	Cross-sectional study: self report questionnaire	80 different worksites in one industry; employees from plant (n=5,517), research and development lab (n=531), and office (n=2,920)	<ul style="list-style-type: none"> <li>– Organizational tenure: Years and months</li> <li>– Safety climate variability (i.e. strength)</li> <li>– Control variables: Age, average working environment risk level</li> </ul>	(1) Workplace characteristics and circumstances Average working environment risk level, work stress (3) Management and colleagues Safety inspections, safety communication, supervisor's effort to improve safety, supervisory action and supervisory expectation, supervisor enforcement of safety policies (4) Employee characteristics Organizational tenure	84.6%
Brondino et al. 2012	Metal and mechanical sector	Italy	Cross-sectional study: self report questionnaire	991 blue collar workers (five workgroups)	<ul style="list-style-type: none"> <li>– Organizational safety climate: Safety communication, safety</li> </ul>	(1) Workplace characteristics and circumstances	61.5%

**Table S5:** Overview of the study characteristics and mapping the clusters according to Cornelissen et al. [5]

Author and year of publication	Workplace / sector	Country	Design and data collection methods	Sample (n=)	Assessment of variables	Mapping to the criteria according to Cornelissen et al. 2017	Quality rating (Percentage of checklist met)
					training, safety systems, management values – Supervisor safety climate: Reaction to workers behaviours, effort to improve safety – Co-worker safety climate: Safety communication, safety mentoring, safety systems, co-worker values – Safety performance: Safety compliance, safety participation – Background information: Gender, age, educational level, nationality, length of employment, kind of job contract, department, work shift	Job contract, department, work shift (3) Management and colleagues Safety communication, safety training, safety systems, management values, supervisor safety climate (reaction to workers behaviours, effort to improve safety), co-workers' safety climate (safety communication, safety mentoring, safety systems, co-worker values) (4) Employee characteristics Gender, age, educational level, nationality, length of employment (6) Performance Safety compliance, safety participation	
Bronkhorst et al. 2016	Hospital sector and other healthcare sectors (mental care facilities, nursing homes, home healthcare organizations and disabled care organizations)	Netherlands	Cross-sectional study: Self report questionnaire	8,761 participants working in 177 health care organization	– Physical and psychosocial safety climate: Management priority given to health and safety; management commitment to health and safety; organizational communication; organizational participation and involvement; co-worker influence and group-norms – Worker health outcomes: Musculoskeletal disorders; emotional exhaustion – Organizational health performance outcomes: Absenteeism; presenteeism; health care utilization – Control variables: Gender, age, tenure, supervisory position, patient/client contact, smoking, exercise	(1) Workplace characteristics and circumstances Supervisory position, patient/client contact (3) Management and colleagues Management priority given to health and safety; management commitment to health and safety; organizational communication; organizational participation and involvement; co-worker influence and group-norms (4) Employee characteristics Gender, age, tenure, smoking, exercise (7) Safety outcomes	53.8%

**Table S5:** Overview of the study characteristics and mapping the clusters according to Cornelissen et al. [5]

Author and year of publication	Workplace / sector	Country	Design and data collection methods	Sample (n=)	Assessment of variables	Mapping to the criteria according to Cornelissen et al. 2017	Quality rating (Percentage of checklist met)
						Musculoskeletal disorders, emotional exhaustion, absenteeism; presenteeism; health care utilization	
Bunner et al. 2018	Manufacturing, construction, trade and maintenance, traffic and warehousing, agriculture, forestry, fishery, water supply, sewage and waste disposal, removal of pollution, other sectors	Austria	Cross-sectional study: Self report questionnaire	122 high-risk organizations (safety engineers and managers as one representative per organization)	<ul style="list-style-type: none"> <li>– Work intensification: Job demands</li> <li>– Safety climate: Management values, safety practices, safety communication, safety training and safety equipment</li> <li>– Safety motivation and safety knowledge</li> <li>– Safety compliance and safety participation</li> <li>– Control variables: Number of employees, respondents' role</li> </ul>	(1) Workplace characteristics and circumstances Job demands, number of employees, respondents' role (3) Management and colleagues Management values, safety practices, safety communication, safety training (4) Employee characteristics Safety motivation, safety knowledge (6) Performance Safety compliance, safety participation, safety equipment	76.9%
Chen et al. 2017	Construction sector	Canada	Cross-sectional study: Self report questionnaire	837 workers from 112 construction sites	<ul style="list-style-type: none"> <li>– Individual resilience</li> <li>– Safety climate: Management commitment to safety, supervisor safety perception, co-worker safety perception, role overload, work pressure, safety knowledge</li> <li>– Incident reporting: Physical symptoms, unsafe events, and psychological stress symptoms</li> <li>– Demographic section: Age, tenure, gender, weekly working hours, union member, accomplished safety training, current job position</li> </ul>	(1) Workplace characteristics and circumstances Role overload, work pressure, weekly working hours, union member, current job position (3) Management and colleagues Management commitment to safety, supervisor safety perception, co-worker safety perception, safety training (4) Employee characteristics Individual resilience, safety knowledge, age, tenure, gender (7) Safety outcomes Physical symptoms, unsafe events, psychological stress symptoms	69.2%

**Table S5:** Overview of the study characteristics and mapping the clusters according to Cornelissen et al. [5]

Author and year of publication	Workplace / sector	Country	Design and data collection methods	Sample (n=)	Assessment of variables	Mapping to the criteria according to Cornelissen et al. 2017	Quality rating (Percentage of checklist met)
Clarke et al. 2006	Manufacturing sector	United Kingdom	Cross-sectional study: Self report questionnaire	105 participants from two sites	<ul style="list-style-type: none"> <li>– Safety climate: Supervisory action, supervisory expectation</li> <li>– Leader influence tactics: Pressure, upward appeals, exchange, coalition, ingratiation, rational persuasion, inspirational appeals, consultation</li> <li>– Safety participation</li> <li>– Demographics: Gender, age, tenure, job position</li> </ul>	(1) Workplace characteristics and circumstances Job position (3) Management and colleagues Supervisory action, supervisory expectation, leader influence tactics (4) Employee characteristics Gender, age, tenure (6) Performance Safety participation	69.2%
Dal Corso 2008	Hospital sector	Italy	Cross-sectional study: Self report questionnaire	231 nursing coordinators and nurses from two hospitals	<ul style="list-style-type: none"> <li>– Organizational climate: Affective, cognitive, and instrumental factor</li> <li>– Safety climate: Manager values</li> <li>– Safety motivation</li> <li>– Safety performance: Safety compliance and safety participation</li> </ul>	(2) Climate and culture Affective, cognitive, and instrumental factor (3) Management and colleagues Manager values (4) Employee characteristics Safety motivation (6) Performance Safety compliance, safety participation	53.8%
DeJoy et al. 2004	Retail chain sector	United States of America	Cross-sectional study: Self report questionnaire (part of a larger study)	2,208 employees from 21 retail units	<ul style="list-style-type: none"> <li>– Organizational climate: Organizational support, co-worker support, participation with others and with supervisors, safety communication</li> <li>– Environmental conditions</li> <li>– Safety policies and programs</li> <li>– Safety climate: Management support for safety, importance of safety issues within the organization</li> <li>– Perceived safety at work</li> <li>– Control variables: Age, tenure, gender, number of hours worked</li> </ul>	(1) Workplace characteristics and circumstances Environmental conditions, perceived safety at work, number of hours worked (3) Management and colleagues Organizational support, co-worker support, safety policies and programs, safety communication, management support for safety, importance of safety issues within the organization (4) Employee characteristics Age, tenure, gender (6) Performance Participation with others and with supervisors	69.2%

**Table S5:** Overview of the study characteristics and mapping the clusters according to Cornelissen et al. [5]

Author and year of publication	Workplace / sector	Country	Design and data collection methods	Sample (n=)	Assessment of variables	Mapping to the criteria according to Cornelissen et al. 2017	Quality rating (Percentage of checklist met)
DeJoy et al. 2010	Retail chain sector	United States of America	Cross-sectional study: Self report questionnaire (part of a larger study)	1,723 employees from 21 retail units	<ul style="list-style-type: none"> <li>Organizational core values</li> <li>Occupational safety and health policies and programs</li> <li>Perceived organizational support</li> <li>Safety climate: Management support for safety, importance of safety issues within the organization</li> <li>Organizational commitment</li> <li>Withdrawal behaviours: Turnover intention, absence, lateness</li> <li>Vitality</li> <li>Perceived safety at work</li> <li>Accidents</li> </ul>	(1) Workplace characteristics and circumstances Perceived safety at work (2) Climate and culture Organizational core values (3) Management and colleagues Occupational safety and health policies and programs, perceived organizational support, management support for safety, importance of safety issues within the organization (4) Employee characteristics Turnover intention, vitality (6) Performance Organizational commitment (7) Safety outcomes Accidents, absence	76.9%
Fernández-Muñoz et al. 2007	Construction, industrial and service sectors	Spain	Cross-sectional study: Self report questionnaire	455 employees (safety officer or safety coordinator) from construction, industrial and service sectors	<ul style="list-style-type: none"> <li>Safety Management System (SMS): Safety policy, incentives, training, communication, planning (preventive, emergency), control (internal, benchmarking techniques)</li> <li>Managers' commitment: Managers' attitudes, managers' behaviour</li> <li>Employees' involvement</li> <li>Safety performance: Number of personal injuries, material damage, employee motivation, absenteeism, or lost time</li> </ul>	(3) Management and colleagues Safety policy, incentives, training, communication, planning (preventive, emergency), control (internal, benchmarking techniques), managers' attitudes, managers' behaviour (4) Employee characteristics Employee motivation (6) Performance Employee involvement (7) Safety outcomes Number of personal injuries, material damage, absenteeism, or lost time	84.6%
Fernández-Muñoz et al. 2012	Industry, construction, services, agriculture & mining sector	Spain	Cross-sectional study: Self report questionnaire	131 safety officers from different sectors (industry, construction, services, agriculture & mining)	<ul style="list-style-type: none"> <li>Management commitment</li> <li>Incentives</li> <li>Work pressure</li> <li>Communication</li> </ul>	(1) Workplace characteristics and circumstances Work pressure (3) Management and colleagues	76.9%

**Table S5:** Overview of the study characteristics and mapping the clusters according to Cornelissen et al. [5]

Author and year of publication	Workplace / sector	Country	Design and data collection methods	Sample (n=)	Assessment of variables	Mapping to the criteria according to Cornelissen et al. 2017	Quality rating (Percentage of checklist met)
					<ul style="list-style-type: none"> <li>– Safety behaviour: Safety compliance, safety participation</li> <li>– Performance: Safety performance (injuries to workers, material damage), employee satisfaction (satisfaction, absenteeism, worker complaints, worker quitting), firm competitiveness (product quality, productivity, customer satisfaction, image and reputation, innovation)</li> </ul>	Management's commitment, incentives, communication (4) Employee characteristics Satisfaction, worker complaints, workers quitting (5) External Customer satisfaction (6) Performance Safety compliance, safety participation, product quality, productivity, image and reputation, innovation (7) Safety outcomes Injuries to workers, material damage, absenteeism	
Garcia et al. 2004	Pottery sector	Spain	Cross-sectional study: Self report questionnaire	734 production workers from a pottery industry	<ul style="list-style-type: none"> <li>– Safety climate: workers' health and safety are sufficiently protected, management involved in occupational risk prevention, productivity and safety at work are equally important, investment in risk prevention, supervisors encourage safety behaviour/take into account my opinion and suggestions, persons devoted to health and safety, rules for safe working, received adequate health and safety training, received adequate equipment for personal protection</li> <li>– Worker behaviour related to health and safety</li> <li>– Worker health and safety training</li> <li>– Number of employees, job category, type of employment, time working in pottery industry</li> <li>– Personal variables: Age, gender, education, children, nationality</li> </ul>	(1) Workplace characteristics and circumstances Number of employees, job category, type of employment, productivity, and safety at work are equally important, received adequate equipment for personal protection (3) Management and colleagues Worker health and safety training, management involved in occupational risk prevention, investment in risk prevention, supervisors encourage safety behaviour/take into account my opinion and suggestions, persons devoted to health and safety, rules for safe working, received adequate health and safety training (4) Employee characteristics	84.6%

**Table S5:** Overview of the study characteristics and mapping the clusters according to Cornelissen et al. [5]

Author and year of publication	Workplace / sector	Country	Design and data collection methods	Sample (n=)	Assessment of variables	Mapping to the criteria according to Cornelissen et al. 2017	Quality rating (Percentage of checklist met)
						Age, gender, education, children, nationality, time working in pottery industry (6) Performance Worker behaviour related to health and safety	
Gershon et al. 2000	Hospital sector	United States of America	Cross-sectional study: Self report questionnaire	789 employees (nursing, technician, physician)	<ul style="list-style-type: none"> <li>– Safety climate: Safety program elements, support for safety program; senior management support for safety; communication and feedback about safety; accountability and responsibility; accessibility, availability, and quantity of safety equipment, supplies and engineering controls; design, maintenance, and housekeeping of the work site; training and education; absence of job hindrances to safety</li> <li>– Self-reported compliance rates</li> <li>– Exposure history: Needlestick injuries; splashes to eyes or mouth; contacts with open wounds; and cuts with sharps objects</li> <li>– Demographics: Age, sex, education, occupation, work schedule, supervisory status</li> </ul>	(1) Workplace characteristics and circumstances Occupation, work schedule, supervisory status, accessibility, availability, and quantity of safety equipment, design, maintenance, and housekeeping of the work site absence of job hindrances to safety, supplies and engineering controls (3) Management and colleagues Safety program elements, support for safety program; senior management support for safety; communication and feedback about safety, training, and education (4) Employee characteristics Age, sex, education, accountability, and responsibility (6) Performance Self-reported compliance rates, (7) Safety outcomes Needlestick injuries; splashes to eyes or mouth; contacts with open wounds; and cuts with sharps objects	84.6%
Griffin et al. 2000	Study 1: Manufacturing and mining sector	Australia	Cross-sectional study: Self report questionnaire	Study 1: 1,403 employees in seven organizations	Study 1: <ul style="list-style-type: none"> <li>– Safety climate: Manager values, safety inspections, personnel training, safety communication</li> </ul>	(3) Management and colleagues Manager values, safety inspections, safety practices,	53.8%

**Table S5:** Overview of the study characteristics and mapping the clusters according to Cornelissen et al. [5]

Author and year of publication	Workplace / sector	Country	Design and data collection methods	Sample (n=)	Assessment of variables	Mapping to the criteria according to Cornelissen et al. 2017	Quality rating (Percentage of checklist met)
	Study 2: Manufacturing sector			Study 2: 381 employees in three organizations	<ul style="list-style-type: none"> <li>– Safety knowledge</li> <li>– Safety performance: Safety compliance, and safety participation</li> </ul> Study 2: <ul style="list-style-type: none"> <li>– Safety climate: Manager values, safety practices, personnel training, safety communication, safety equipment</li> <li>– Safety knowledge</li> <li>– Compliance motivation</li> <li>– Participation motivation</li> <li>– Safety performance: Safety compliance, and safety participation</li> </ul>	personnel training, safety communication (4) Employee characteristics Safety knowledge, compliance motivation, participation motivation (6) Performance Safety compliance, safety participation, safety equipment	
Halbesleben et al. 2013	Hospital sector	United States of America	Cohort study: Self report questionnaire at three points, organizational data (number of injuries, number of sick leave days)	658 registered nurses from four acute-care hospitals	<ul style="list-style-type: none"> <li>– Behavioural integrity for safety</li> <li>– Psychological safety toward one's supervisor</li> <li>– Safety compliance</li> <li>– Occupational safety: Injuries and reporting</li> </ul>	(3) Management and colleagues Psychological safety toward one's supervisor, behavioural integrity for safety (6) Performance Safety compliance (7) Safety outcomes Injuries and reporting	69.2%
Hicks et al. 2016	Electricity sector	Australia	Cross-sectional study: Self report questionnaire	739 employees from seven organizations	<ul style="list-style-type: none"> <li>– Safety climate: Safety management, safety standards, safety communication</li> <li>– Emotional exhaustion</li> <li>– Safety-related behaviour: Safety compliance</li> <li>– Safety involvement: Safety-specific behaviour and safety involvement</li> <li>– Control variables: Gender, age, role status, work environment, employment status, geographical location</li> </ul>	(1) Workplace characteristics and circumstances Role status, work environment, employment status, geographical location (3) Management and colleagues Safety management, safety standards, safety communication (4) Employee characteristics Gender, age (6) Performance Safety compliance, safety-specific behaviour, safety involvement (7) Safety outcomes Emotional exhaustion	69.2%
