

Okotto-Okotto et al: Effect of inter-observer variation on association between contamination hazards and microbiological quality of water sources: a longitudinal study

Table S1. electro-conductivity and turbidity of water samples from different sources.

Source type.	Mean turbidity – NTU (n*)	Mean electro-conductivity - μ S (n*)
Piped or kiosk water	11.9 (37)	180.4 (38)
Borehole	12.0 (6)	1276.8 (6)
Well /spring	65.0 (27)	668.7 (28)
Rainwater	3.9 (52)	72.8 (53)
Surface water	352.0 (44)	384.8 (44)

*n= number of samples.
