SUPPLEMENTARY FIGURE 1

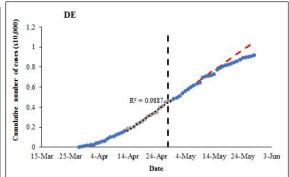

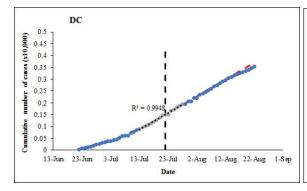

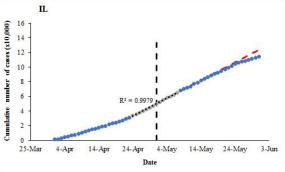

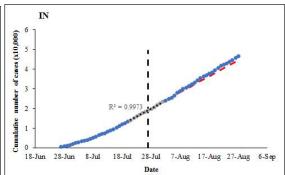

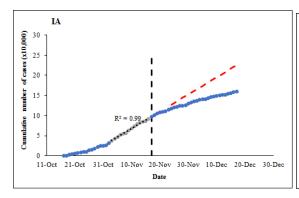

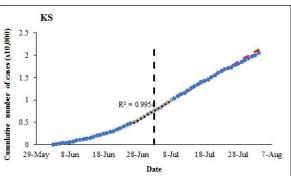

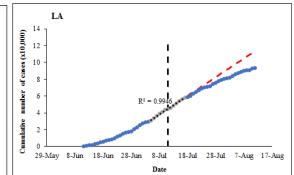

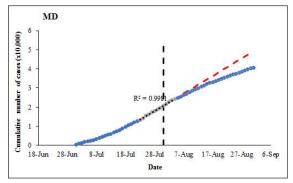

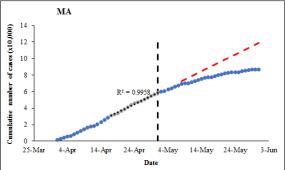

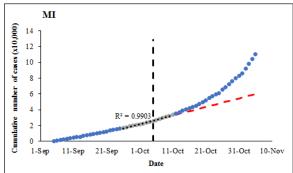

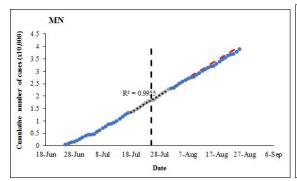

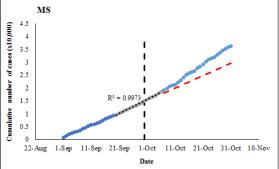

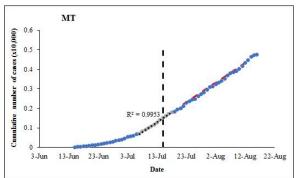

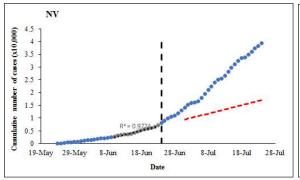

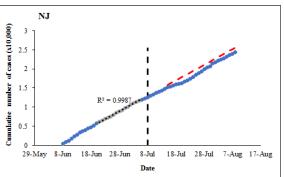

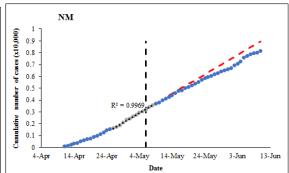

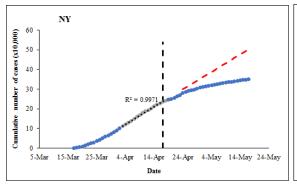

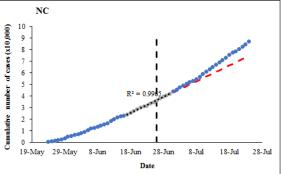

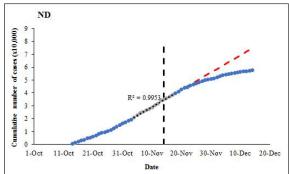

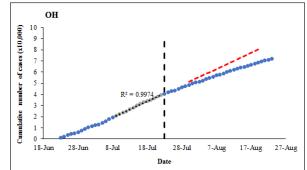

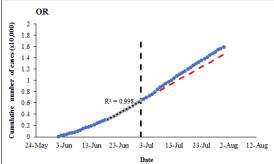

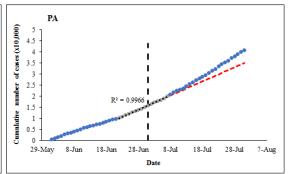

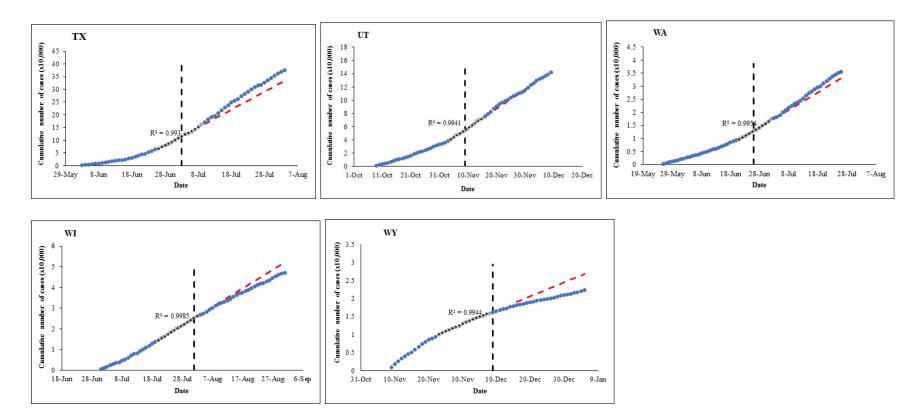

Supplementary Figure S1: Cumulative number of COVID-19 cases (y-axis) in U.S. states over time (x-axis). The chart is showing trend of cases (blue dotted line) for one month pre- and post- FC mandate (total = 2 months) for each state with face coverings mandate. The black vertical line is the date when face coverings order was passed. The gray segment through the case data was used to derive regression equation (black dotted line) that was used to project the number of cases (red line) that would have been recorded if FC order were not passed. The prediction was limited to 28 days post FC order to limit variation. Seven days post FC mandate was omitted from the prediction because the incubation period of COVID-19 is estimated to be 5 days.

Supplementary Table S1: U.S. states with and without state-wide order mandating the wearing of face coverings in public places. Data on confirmed COVID-19 cases were collected from or through the websites of the Department of Public Health of each state.
