

Table S1. Association between Charlson Comorbidity Index and distance covered (meters) in the 6MWT test after Covid-19 hospitalization

n=41	R ²	β	95% CI
Crude model	0.1022	-18.7	-34.7 to -2.6
Adjusted model ^a	0.3286	-23.0	-39.1 to -6.8

^a Model adjusted for a propensity score including sex, days of hospitalization, and 1-minute sit-to-stand test (age is included in the score of the Charlson Comorbidity Index).
