

| Supplement 1. Unadjusted and adjusted prevalence ratios (and 95% confidence intervals) for the association between sexual and gender identity and self-reported HIV risk (n=58,077) | | |
|--|--------------------------|--------------------------|
| | Unadjusted | Adjusted* |
| Sexual and Gender Identity | | |
| Cisgender Bisexual Women | 3.24 (2.43, 4.32) | 1.05 (0.82, 1.34) |
| Cisgender Bisexual Men | 3.49 (2.39, 5.07) | 1.46 (0.96, 2.21) |
| Cisgender Gay Women | 0.84 (0.37, 1.94) | 0.41 (0.25, 1.02) |
| Cisgender Gay Men | 5.86 (4.49, 7.64) | 2.92 (2.21, 3.85) |
| Cisgender Heterosexual Women | 0.59 (0.50, 0.69) | 0.62 (0.52, 0.73) |
| Cisgender Heterosexual Men | Reference | Reference |
| Cisgender Other Sexual Identity Women | 1.40 (0.70, 2.80) | 0.84 (0.40, 1.75) |
| Cisgender Other Sexual Identity Men | 1.53 (0.84, 2.80) | 0.89 (0.49, 1.58) |
| Cisgender Questioning Women | 0.77 (0.23, 2.55) | 1.19 (0.34, 4.15) |
| Non-Binary | 0.69 (0.22, 2.18) | 0.66 (0.23, 1.89) |
| Transgender Women | 2.58 (0.96, 6.94) | 1.20 (0.57, 2.51) |
| Transgender Men | 1.72 (0.42, 7.00) | 1.09 (0.33, 3.62) |
| Adjusted for the ACEs index, income, age, highest education level, race/ethnicity, depression, and binge drinking. Cisgender questioning men not included in analyses due to variance inflation limitations. | | |
