Note: HEI indicates the heavy metal evaluation index; Mq-HPI indicates the modified heavy metal pollution index based on sub index Q; Mqw-HPI indicates the modified heavy metal pollution index based on weight and sub index Q.

Table S3. Standard permissible limit, assigned weights and calculated unit weights of individual heavy metals for the heavy metal contamination index (HCI).

Heavy metal	S_i	Aw_i	W_i
As	10	3	0.200
Cr	50	2	0.133
Hg	6	4	0.267
Ni	70	2	0.133
Pb	10	3	0.200
Zn	3000	1	0.067

Note: Aw_i is the assigned weight for the i^{th} heavy metal based on Delphi's method, and the sum of $Aw_i = 15$; W_i is the calculated unit weights for the i^{th} heavy metal, and the sum of $W_i = 1$; S_i represents the standard permissible limit for the i^{th} heavy metal in $\mu\text{g/L}$ (World Health Organization) ([Mohebbi et al., 2013; Rajkumar et al., 2020](#)).
