#### Supplemental Material: Oncology Opioid Safety Survey Template for Pharmacists

# Managing opioids and mitigating risk: A survey of attitudes, confidence and practices of oncology health care professionals

#### Pharmacist Survey

#### Section A: Q1-8 Demographics

1.	Clinical practice area: Outpatient / Ambulatory Clinic (Please specify which clinical area:)
2.	Gender: M / F / Other / Prefer not to say

- 3. Years working as a pharmacist: 0-5 / 6-10 / 11-15 / 16 or more
- 4. Years working in oncology or palliative care: 0-5 / 6-10 / 11-15 / 16 or more
- 5. What percentage of outpatients in your practice are receiving opioids? <5% / 5-10% / 11-25% / 26-50% / 51-75% / >75%
- 6. What percentage of outpatients in your practice use Illicit<sup>A</sup> opioids? <5% / 5-10% / 11-25% / 26-50% / 51-75% / >75%
- What percentage of outpatients in your practice have a known opioid use disorder<sup>8</sup>?
   <5% / 5-10% / 11-25% / 26-50% / 51-75% / >75%
- 8. What percentage of outpatients in your practice are engaging in aberrant medication taking behaviors<sup>C</sup> of opioids?

<5% / 5-10% / 11-25% / 26-50% / 51-75% / >75%

A: Illicit opioids are those which are classified as illegal (i.e.: heroin) or are purchased "on the streets" (i.e.: fentanyl, percocets) or are obtained from others.

**B**: Opioid use disorder is a medical condition defined by the Diagnostic and Statistical Manual of Mental Disorders, 5th edition (DSM-5) as "a problematic pattern of opioid use leading to clinically significant impairment or distress" that is manifested by specific clinical features (i.e. recurrent opioid use in situations in which it is physically hazardous). **C**: Aberrant medication taking behaviors refer to any use of a prescription opioids in a manner other than as intended by the prescribing physician and pharmaceutical manufacturer. These behaviors can include unprescribed dose escalation, route alteration, procuring from other sources and diversion.

#### Section B: Q 10-18 General Attitudes Towards Opioid Use in Cancer Care

Please indicate the extent of your agreement with each of the statements below:

	Strongly Agree	Somewhat Agree	Neutral	Somewhat Disagree	Strongly Disagree
Patients with cancer are at very low risk for					
harm related to opioids because they have					
pain					

Patients with cancer frequently become					
addicted to opioids					
Patients with cancer frequently take					
opioids as a means of "chemical coping" <sup>A</sup>					
Patients with cancer frequently do not take					
their opioids as prescribed by their					
physician or nurse practitioner					
Opioids should only be prescribed by pain					
specialists or palliative care					
physicians/nurse practitioners					
Many patients with cancer have					
comorbidities that put them at high risk for					
developing opioid adverse effects <sup>B</sup>					
(If answered strongly agree or somewhat					
agree, follow-up question: What					
comorbidities do you think put patients					
with cancer at high risk for developing					
opioid adverse effects <sup>B</sup> ?)					
Many patients with cancer have					
comorbidities that put them at high risk for					
developing opioid induced neurotoxicity <sup>C</sup>					
(If answered strongly agree or somewhat					
agree, follow-up question: What					
comorbidities do you think put patients					
with cancer at high risk for developing					
opioid induced neurotoxicity <sup>C</sup> ?)					
Many patients with cancer have					
comorbidities that put them at high risk for					
developing opioid use disorder <sup>D</sup>					
(If answered strongly agree or somewhat					
agree, follow-up question: What					
comorbidities do you think put patients					
with cancer at high risk for developing					
opioid use disorder <sup>D</sup> ?)					
Many patients with cancer are at high risk					
of opioid overdose <sup>E</sup>					
· · · · · · · · · · · · · · · · · · ·	1	1	1	I	<u> </u>

A: Chemical coping is the use of opioids to cope with emotional distress and is characterized by inappropriate and/or excessive opioid use

**B**: Opioid adverse effects develop from the generalized non-specific action of opioids (i.e. constipation)

C: Opioid induced neurotoxicity develop from opioid metabolites (i.e. myoclonus)

**D:** Opioid use disorder is a medical condition defined by the Diagnostic and Statistical Manual of Mental Disorders, 5th edition (DSM-5) as "a problematic pattern of opioid use leading to clinically significant impairment or distress" that is manifested by specific clinical features (i.e. recurrent opioid use in situations in which it is physically hazardous).

## Section C: Q 19-35 Confidence in Managing Opioids in Cancer Care

Please indicate the extent of your agreement with each of the statements below:

	Strongly	Somewhat	Neutral	Somewhat	Strongly
	Agree	Agree		Disagree	Disagree
I am confident in my clinical skills in					
assessing patients on opioids for cancer					
pain management					
I am confident in my clinical skills					
educating my patients about multi-modal					
pain management approaches					
I am confident in practicing the universal					
precautions <sup>A</sup> approach regarding opioid					
use					
I am confident in my clinical skills					
providing cancer pain management for a					
patient with a known opioid use disorder <sup>B</sup>					
I am confident in my clinical skills					
providing cancer pain management for a					
patient on opioid agonist therapy <sup>C</sup>					
I am confident in my clinical skills					
identifying aberrant medication taking					
behaviors <sup>D</sup> in my patients with cancer					
I am confident in my ability to manage					
aberrant medication taking behaviors <sup>D</sup> in					
my patients with cancer					
(Follow-up question: How do you manage					
aberrant medication taking behaviours <sup>D</sup> ?)					
I am confident in my ability to screen					
patients for risk of developing an opioid					
use disorder <sup>B</sup>					
I am confident in my ability to identify and					
appropriately refer patients with signs and					
symptoms of an opioid use disorder <sup>B</sup>					
I am confident in my skills interpreting					
urine drug screens					
I am confident in my ability to interpret					
and uphold an opioid contract <sup>E</sup>					
I am confident in counselling around safe					
storage and disposal of opioids					
I am confident in my clinical skills					
assessing for opioid adverse effects <sup>F</sup>					

I am confident in my clinical skills			
assessing for opioid induced			
neurotoxicity <sup>G</sup>			
I am confident in my clinical skills to			
identify patients with cancer at high risk of			
opioid overdose <sup>H</sup>			
I am confident in my clinical skills			
assessing for signs and symptoms of			
opioid overdose <sup>H</sup>			
I am confident in my clinical skills			
educating patients and/or family members			
and caregivers on naloxone use for a			
suspected opioid overdose <sup>H</sup>			

A: Universal precautions are ten steps used as a guide to manage chronic pain [1].

B: Opioid use disorder is a medical condition defined by the Diagnostic and Statistical Manual of Mental Disorders, 5th edition (DSM-5) as "a problematic pattern of opioid use leading to clinically significant impairment or distress" that is manifested by specific clinical features (i.e. recurrent opioid use in situations in which it is physically hazardous). C: Opioid agonist therapy includes buprenorphine-naloxone (suboxone) and methadone maintenance therapy. D: Aberrant medication taking behaviors refer to any use of a prescription opioids in a manner other than as intended by the prescribing physician and pharmaceutical manufacturer. These behaviors can include dose escalation, route alteration, procuring from other sources and diversion.

*E*: Opioid contracts are written agreements between the physician or NP and patient that outline the conditions of opioid prescribing.

F: Opioid adverse effects develop from the generalized non-specific action of opioids (i.e. constipation)

**G**: Opioid induced neurotoxicity develops from opioid metabolites (i.e. myoclonus)

H: Opioid overdose occurs when opioids in high doses cause respiratory depression and death.

#### Section D: Q 36-57 Practices in Managing Opioids in Cancer Care

Please indicate how often you practice the following statements:

	Always	Often	Rarely	Never
I conduct a thorough review of my patients'				
substance use histories				
I call my patients' pharmacies to gather more				
information about their opioid use history				
I call my patients' other providers (i.e.: family				
physician) for collateral information about their				
opioid use history				
I use Connecting Ontario to gather more				
information about my patients' opioid use history				
I assess where my patients are storing their opioids				
I assess how my patients are disposing their unused				
opioids				

	I use validated screening tools <sup>A</sup> to screen patients			
	with cancer I suspect are at high risk for opioid use			
	disorder <sup>B</sup>			
	(If answered always, often or rarely, follow-up			
	question: Please specify which of the following			
	screening tools you use:			
	CAGE			
	ORT (Opioid Risk Tool)			
	SOAP-SF (Screener and Opioid Assessment for			
	Patients with Pain– short form)			
	SOAPP-revised (SOAPP-R)			
l	Other: Please specify)			
	I screen informal caregivers (i.e. family and friends)			
l	for risk of an opioid use disorder			
	I review urine drug screens			
	(If answered always, often or rarely, follow-up			
	question: For which patients do you review urine			
l	drug screens?)			
	I participate in the care of patients with opioid			
l	contracts <sup>C</sup>			
l	I conduct pill counts			
	I recommend the use of structured prescribing of			
	opioids (i.e.: frequent dispensing and limited			
l	quantity with each prescription)			
	I provide education to my patients regarding the			
l	safe storage of opioids			
	I provide education to my patients regarding safe			
l	disposal of opioids			
	I provide education to my patients regarding the			
	safe use of breakthrough analgesia <sup>D</sup>			
	I provide education to my patients on the			
	management of opioid adverse effects <sup>E</sup>			
	I provide education to my patients on the signs and			
	symptoms of opioid induced neurotoxicity <sup>F</sup>			
	I provide education to my patients about potential			
	pharmacodynamic drug interactions when using			
	opioids concomitantly with other CNS depressants			
	(i.e.: benzodiazepines, alcohol, etc)			
	I provide education to my patients about the signs			
	and symptoms of opioid overdose <sup>G</sup>			
	I provide education to my patients about naloxone			
	use			
	I recommend/dispense naloxone to patients at high			
	risk of opioid overdose <sup>G</sup>			

Ladica and for the Smith account of a Library		Ţ	T					
I advocate for the involvement of addictions								
medicine in the care of my patients with cancer								
A: Examples of validated screening tools include CAGE, ORT (Opioid Risk Tool), SOAP-SF (Screener and Opioid Assessment for Patients with Pain—short form), SOAPP-revised (SOAPP-R). Note that these tools have been validated in non-cancer pain.  B: Opioid use disorder is a medical condition defined by the Diagnostic and Statistical Manual of Mental Disorders, 5th edition (DSM-5) as "a problematic pattern of opioid use leading to clinically significant impairment or distress" that is manifested by specific clinical features (i.e. recurrent opioid use in situations in which it is physically hazardous).  C: Opioid contracts are written agreements between the physician or NP and patient that outline the conditions of opioid prescribing.  D: Breakthrough analgesia refer to opioid doses used for management of transitory exacerbations of pain that occurs on the background of otherwise stable pain on opioid therapy.  E: Opioid adverse effects develop from the generalized non-specific action of opioids (i.e. constipation)  F: Opioid induced neurotoxicity develops from opioid metabolites (i.e. myoclonus)  G: Opioid overdose occurs when opioids in high doses cause respiratory depression and death.								
Section E: Q 58-60 Personal Experience with Adverse Ev	ents in Cancer Patio	ents Using Op	ioids					
58. Over the past year, how many of your patients have depression, death) related to prescribed opioids?	had a significant ac	dverse event (	i.e.: delirium, re	espiratory				
None 1 2 3 4 5	or more							
If none is selected, questions 59 to 60 will not appear.								
59. Please provide examples of adverse events experier	ced by your patient	ts or their care	egivers:					
60. Which of the following factors may have contribute	d to these adverse e	events (select	all that apply)					
<ul> <li>The prescribed dose was too high</li> <li>The patient accidentally took an incorrect dose</li> <li>The patient deliberately took an incorrect dose</li> <li>Dispensing error</li> <li>Patient took the medication in a non-prescribed rown</li> <li>Dose was not adjusted for co-morbidities (i.e.: renown</li> <li>Patient used opioids that weren't prescribed by the Patient was using other illicit substances</li> <li>Patient was using other CNS depressants (i.e.: bent Lack of communication between patient and healt Other (Please specify:</li> </ul>	al or liver dysfunctio eir physician or nurs zodiazepines, alcoho	on) se practitioner						

#### Section F: Q 61-72 Education and Resources

Please indicate the extent of your agreement with each of the statements below:

	Strongly	Somewhat	Neutral	Somewhat	Strongly
	Agree	Agree		Disagree	Disagree
I am aware of community resources					
available for my patients if they exhibit					
aberrant medication taking behavior <sup>A</sup>					
I am aware of UHN resources available for					
my patients if they exhibit aberrant					
medication taking behavior <sup>A</sup>					
I am aware of community resources					
available for my patients if they have an					
opioid use disorder <sup>B</sup>					
I am aware of UHN resources available for					
my patients if they have an opioid use					
disorder <sup>B</sup>					
I am aware of community resources					
available for my patients if they are at high					
risk of opioid overdose <sup>C</sup>					
I am aware of UHN resources available for					
my patients if they are at high risk of					
opioid overdose <sup>C</sup>					

**A:** Aberrant medication taking behaviors refer to any use of a prescription opioids in a manner other than as intended by the prescribing physician and pharmaceutical manufacturer. These behaviors can include unprescribed dose escalation, route alteration, procuring from other sources and diversion.

**B:** Opioid use disorder is a medical condition defined by the Diagnostic and Statistical Manual of Mental Disorders, 5th edition (DSM-5) as "a problematic pattern of opioid use leading to clinically significant impairment or distress" that is manifested by specific clinical features (i.e. recurrent opioid use in situations in which it is physically hazardous). **C:** Opioid overdose occurs when opioids in high doses cause respiratory depression and death.

67. Over the past year, have you participated in any educational activities or events on safe use of opioids for cancer pain management? Yes / No

If no is selected, question 68 will not appear.

68. If yes, in which of the following educational activities did you participate? (select all that apply):

Hospital rounds	
Conference	
Workshop or webinar	
Literature reading	
Pharma-sponsored events	
Other (please specify)	

69. Over the past year, have you participated in any educational activities or events on opioid use disorder in the context of patients with cancer pain? Yes / No *If no is selected, question 70 will not appear.* 

Hospital rounds  Conference  Workshop or webinar  Literature reading  Pharma-sponsored events  Other (please specify:	70. If yes, in which of the following educational activities did you participa	te? (select all that	apply):
