In Appreciation

Medical literature is dependent on peer review. It is this system that ensures that published papers are of the highest quality. It is not a perfect system; books have been written discussing its weaknesses and flaws. However, no one has ever developed a better way of ensuring scientific validity. For the system to work, a cadre of expert manuscript reviewers must be assembled, which is not an easy task. Specialties must be identified, schedules coordinated, and time-consuming services volunteered. The reviewers receive no reward or compensation other than the satisfaction of knowing that they have contributed to the body of knowledge within the profession.

As a small token of appreciation, the *Journal* staff would like to take this opportunity to publicly thank those reviewers who assisted with manuscript review over the past year. There would not be a *Journal* without them.
