The zeta potential measured the stability of the particles on its surface and presents results in Table S1.

**Table S1.** Zeta Potential Results.

| Sample                  | Average (mV) | Area (%) | Standard Deviation (mV) |
|-------------------------|--------------|----------|-------------------------|
| NC/HA/ $\beta$ -TCP     | −18.8        | 100.0    | 6.98                    |
| NC/HA/ $\beta$ -TCP (1) | −11.2        | 80.1     | 3.83                    |
| NC/HA/ $\beta$ -TCP (1) | −23.8        | 19.9     | 3.17                    |
| NC/HA/ $\beta$ -TCP (1) | 0.00         | 0.0      | 0.00                    |
| NC/HA/ $\beta$ -TCP (2) | −13.1        | 100.0    | 3.22                    |
| NC/HA/ $\beta$ -TCP (2) | 0.00         | 0.0      | 0.00                    |
| NC/HA/ $\beta$ -TCP (2) | 0.00         | 0.0      | 0.00                    |

Table S2 shows the particle size distributions that were found using three records for each of the samples.

**Table S2.** Particle Size Results.

| Sample                  | Peak | Size (nm) | Intensity (%) | Standard Deviation (nm) |
|-------------------------|------|-----------|---------------|-------------------------|
| NC/HA/ $\beta$ -TCP     | 1    | 4710      | 55.7          | 778.3                   |
| NC/HA/ $\beta$ -TCP     | 2    | 185.9     | 44.3          | 66.81                   |
| NC/HA/ $\beta$ -TCP     | 3    | 0.000     | 0.0           | 0.000                   |
| NC/HA/ $\beta$ -TCP (1) | 1    | 1763      | 73.9          | 1196                    |
| NC/HA/ $\beta$ -TCP (1) | 2    | 164.2     | 26.1          | 74.04                   |
| NC/HA/ $\beta$ -TCP (1) | 3    | 0.000     | 0.0           | 0.000                   |
| NC/HA/ $\beta$ -TCP (2) | 1    | 275.6     | 83.6          | 149.78                  |
| NC/HA/ $\beta$ -TCP (2) | 2    | 4748      | 16.4          | 759.3                   |
| NC/HA/ $\beta$ -TCP (2) | 3    | 0.000     | 0.0           | 0.000                   |
