Figure S1. Characterizations of the Ni-rGOs. (a) XRD spectrum; (b) TEM image; (c) SEM image and corresponding EDS mapping of element C, O, and Ni results. XRD spectrum indicates the (200) crystal planes of cubic Ni lattice, and nominal (111) and (220) crystal planes of NiO lattices. The TEM and SEM images revealed the presence of Ni particles with uniform sized and well dispersed on the rGOs. The EDS mapping also shows uniform distributions of Ni on the surface of the rGOs.
