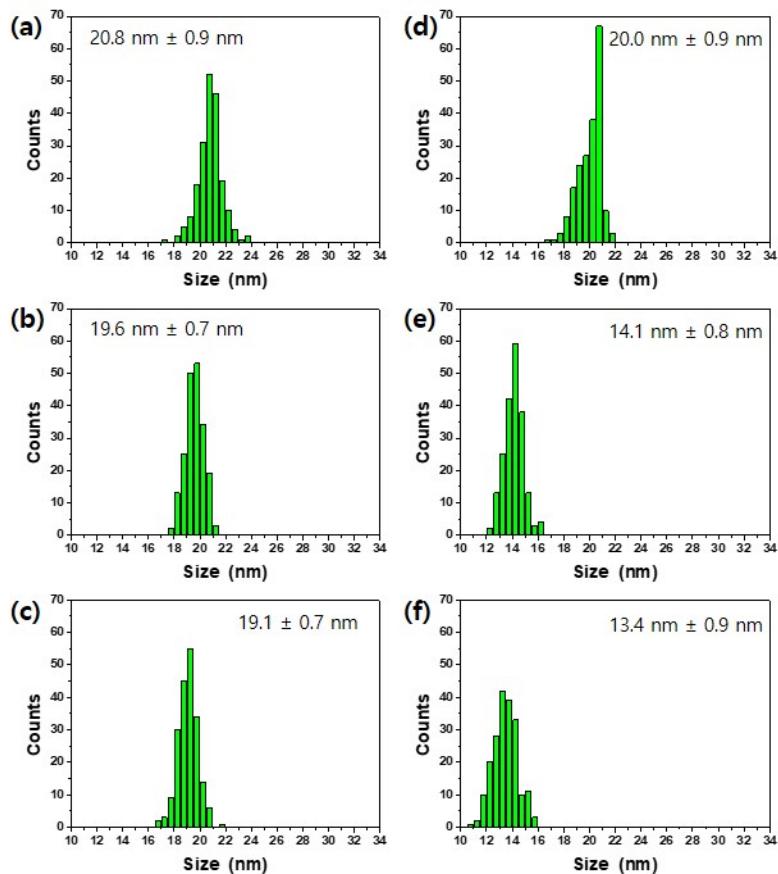

Figure S1. Size distributions of NaYF₄:Nd(x%), Yb(10%) core DSNPs with various Nd³⁺ concentrations [x = (a) 10%, (b) 20%, (c) 25%, (d) 30%, (e) 40%, and (f) 50%].

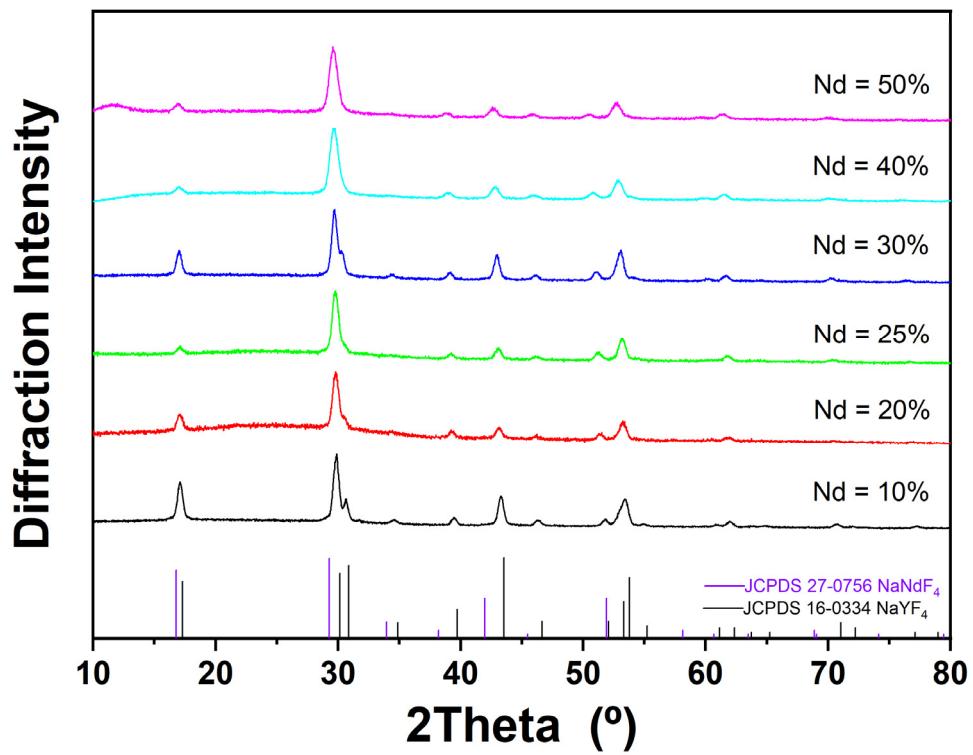

Figure S2. XRD patterns of NaYF₄:Nd(x%), Yb(10%) core DSNPs with various Nd³⁺ concentrations [x = 10, 20, 25, 30, 40, and 50%].

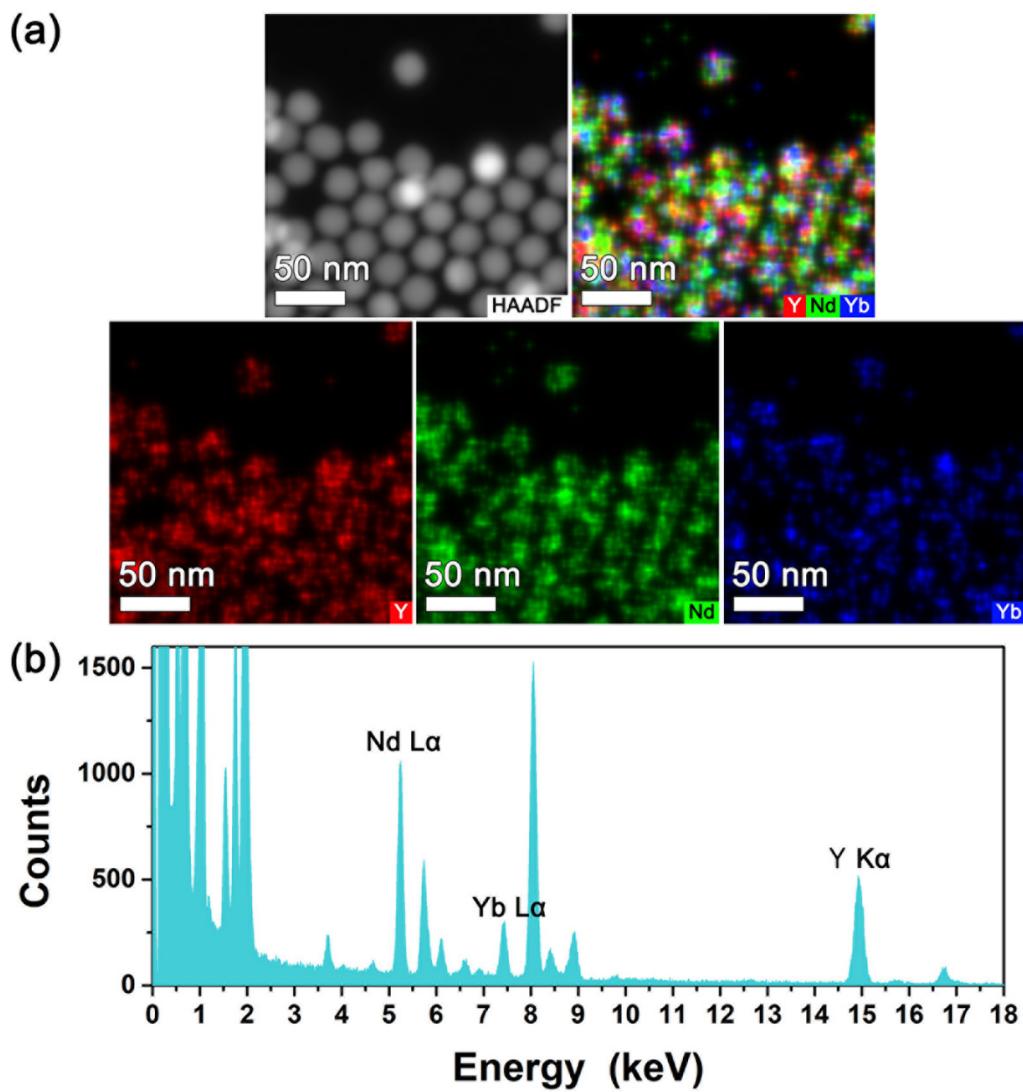

Figure S3. (a) HAADF-STEM image and EDS map images (merged image, Y K α , Nd L α , and Yb L α map images) of NaYF₄:Nd(30%),Yb(10%) core DSNPs. (b) EDS spectrum of NaYF₄:Nd(30%),Yb(10%) core DSNPs.

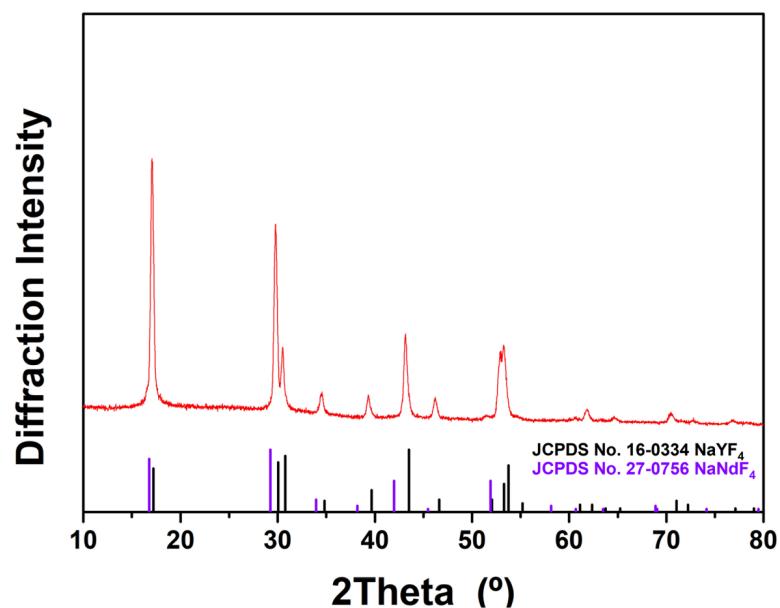

Figure S4. XRD pattern of NaYF₄:Nd(30%), Yb(10%)/NaYF₄:Nd(10%)/NaYF₄ C/S/S DSNPs.

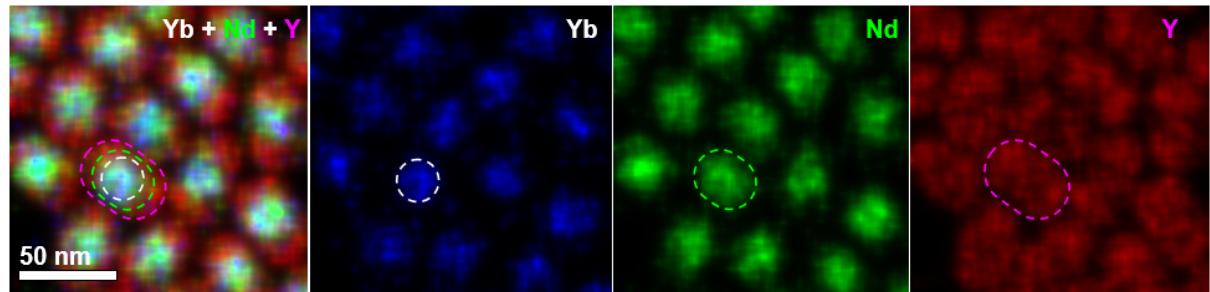

Figure S5. EDS map images showing the distribution of Yb (blue color), Nd (green color), and Y (red color) of the NaYF₄:Nd(30%), Yb(10%)/NaYF₄:Nd(10%)/NaYF₄ C/S/S DSNPs. The composite EDS map image clearly demonstrates that the synthesized DSNPs have core/shell/shell structure.

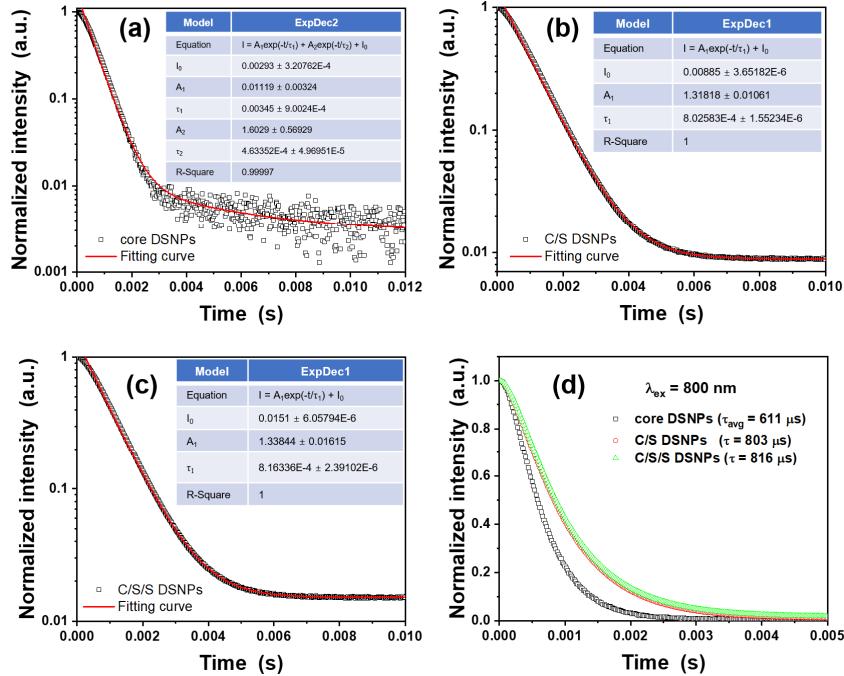

Figure S6. Time-resolved PL profiles with fitted curves of (a) NaYF₄:Nd(30%), Yb(10%) core DSNPs, (b) NaYF₄:Nd(30%), Yb(10%)/NaYF₄:Nd(10%) C/S DSNPs, and (c) NaYF₄:Nd(30%), Yb(10%)/NaYF₄:Nd(10%)/NaYF₄ C/S/S DSNPs under 800 nm excitation. (d) Time-resolved PL profiles of NaYF₄:Nd(30%), Yb(10%) core DSNPs (black square), NaYF₄:Nd(30%), Yb(10%)/NaYF₄:Nd(10%) C/S DSNPs, (red circle), and NaYF₄:Nd(30%), Yb(10%)/NaYF₄:Nd(10%)/NaYF₄ C/S/S DSNPs (green triangle). In the case of the core DSNPs, the average PL lifetime can be obtained by using a following Equation (S1) [S1],

$$\tau_{avg} = \frac{A_1 \tau_1^2 + A_2 \tau_2^2}{A_1 \tau_1 + A_2 \tau_2} \quad \text{--- (S1)}$$

For the core DSNPs, the average PL lifetime (τ_{avg}) was calculated to be 611 μs .

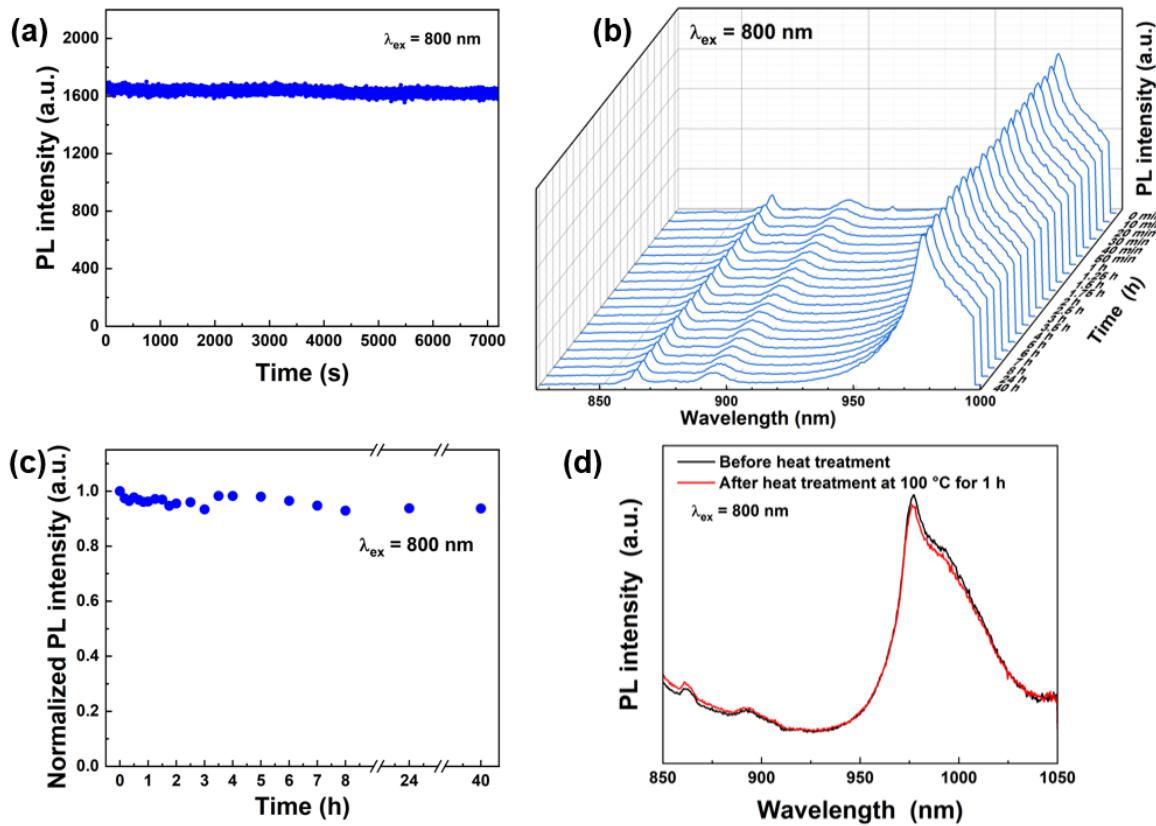

Figure S7. (a) PL intensities of the $\text{NaYF}_4:\text{Nd}(30\%),\text{Yb}(10\%)/\text{NaYF}_4:\text{Nd}(10\%)/\text{NaYF}_4$ C/S/S DSNPs monitored at 978 nm under continuous irradiation with an 800 nm NIR laser ($27.2 \text{ W}\cdot\text{cm}^{-2}$). (b) PL spectra and (c) normalized PL intensities of the $\text{NaYF}_4:\text{Nd}(30\%),\text{Yb}(10\%)/\text{NaYF}_4:\text{Nd}(10\%)/\text{NaYF}_4$ C/S/S DSNPs under irradiation with a 365 nm UV lamp (6 W). (d) PL spectra of the $\text{NaYF}_4:\text{Nd}(30\%),\text{Yb}(10\%)/\text{NaYF}_4:\text{Nd}(10\%)/\text{NaYF}_4$ C/S/S DSNPs before and after heat treatment at 100°C for 1 h.

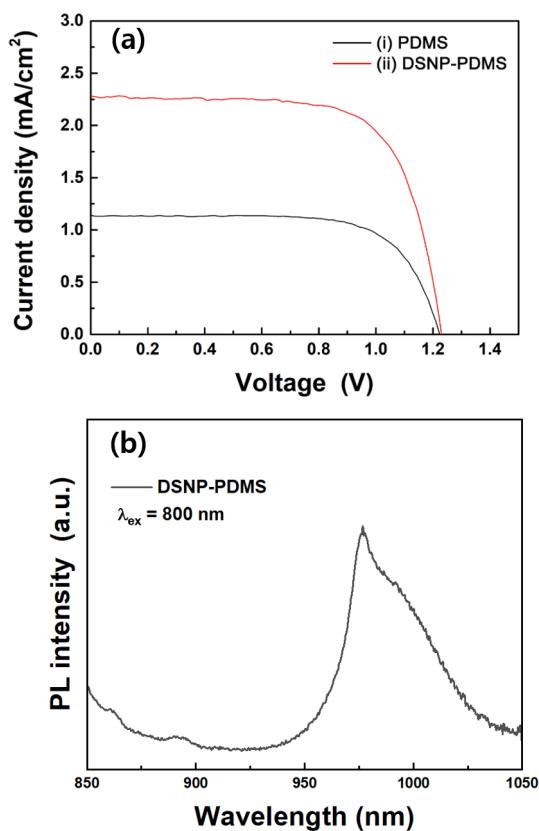

Figure S8. (a) Current density versus voltage curves of (i) bare PDMS- and (ii) C/S/S DSNP-PDMS composite-coupled silicon solar cells. (b) PL spectrum of the C/S/S DSNP-PDMS composite under excitation with 800 nm NIR light (1 mW).
