Supplementary Materials

Supplementary Figure S1. $\text{H}_2\text{O Po} (\text{mg kg}^{-1})$ (a), $\text{NaHCO}_3 \text{ Po} (\text{mg kg}^{-1})$ (b) $\text{HCl Pi} (\text{mg kg}^{-1})$ (c) $\text{HCl Po} (\text{mg kg}^{-1})$ (d) (extracted by H_2O , NaHCO_3 , and HCl) and Residual P (mg kg^{-1}) (e), Total P (mg kg^{-1}) (f) at control (C; no additional deposition; black bars), and after (N; $20 \text{ g N m}^{-2} \text{ yr}^{-1}$; light grey), (P; $10 \text{ g P m}^{-2} \text{ yr}^{-1}$; dark grey), (NP; $30 \text{ g NP m}^{-2} \text{ yr}^{-1}$; off white) fertilization in Ash, Walnut, Larch, Ash Larch and Walnut Larch plantations [in three replications](#) at 0–20 cm soil depth in NE China. Within species significant differences between treatments are indicated by different lower-case letters (Tukey's HSD post hoc; $P < 0.05$; mean \pm SE)

Supplementary Figure S2. Heat map for Pearson's correlation coefficients of soil acidification, P fractions, and other soil chemical properties in mono cultures at three replications. The P fractions and other chemical properties were identified in each sample by colours deduced from blue to red (-1.0 to +1.0). Abbreviations: phosphorus (Pi & Po) fractions (extracted by H₂O, NaHCO₃, NaOH, and HCl), Residual P (Resi P), Hydrogen ions (H⁺), Potassium ions (K⁺), Magnesium ions (Mg²⁺), Manganese ions (Mn²⁺), Sodium ions (Na⁺), Calcium ions (Ca²⁺), Aluminium ions (Al³⁺), Iron ions (Fe³⁺), Effective cation exchange capacity (CEC), Base saturation percentage (BS%), Effective acidity (EA), Aluminium calcium ratio (Al:Ca), Ammonium (NH₄⁺-N), nitrate (NO₃⁻-N), Total nitrogen (TN), Soil organic carbon (SOC), Carbon nitrogen ratio (C:N ratio), Soil pH (pH) and Total phosphorus (T P).

Supplementary Figure S3. Heat map for Pearson's correlation coefficients of soil acidification, P fractions, and other soil chemical properties in mixed cultures at three replications. The P fractions and other chemical properties were identified in each sample by colours deduced from blue to red (-1.0 to +1.0). Abbreviations: phosphorus (Pi & Po) fractions (extracted by H₂O, NaHCO₃, NaOH, and HCl), Residual P (Resi P), Hydrogen ions (H⁺), Potassium ions (K⁺), Magnesium ions (Mg²⁺), Manganese ions (Mn²⁺), Sodium ions (Na⁺), Calcium ions (Ca²⁺), Aluminium ions (Al³⁺), Iron ions (Fe³⁺), Effective cation exchange capacity (CEC), Base saturation percentage (BS%), Effective acidity (EA), Aluminium calcium ratio (Al:Ca), Ammonium (NH₄⁺-N), nitrate (NO₃⁻-N), Total nitrogen (TN), Soil organic carbon (SOC), Carbon nitrogen ratio (C:N ratio), Soil pH (pH) and Total phosphorus (T P).

Supplementary Table S1. Two-way ANOVA results of species, fertilizations and their intercations on soil chemical properties and P fractions (three replications) of mono culture (i.e., *F. mandshurica*, *J. mandshurica* and *L. gmelinii*), and mixed culture (i.e., *F. mandshurica* + *L. gmelinii* and *J. mandshurica* + *L. gmelinii*) in three replications at four levels of fertilization (i.e., C; no fertilizer application, N; 20 g N m⁻² yr⁻¹, P; 10 g P m⁻² yr⁻¹, and NP; 30 g NP m⁻² yr⁻¹ N and P fertilizer application) in northeast China. Phosphorus (Pi & Po) fractions (extracted by H₂O, NaHCO₃ and HCl), Potassium ions (K⁺), Manganese ions (Mn²⁺), Sodium ions (Na⁺), Effective cation exchange capacity(CEC), Ammonium (NH₄⁺-N), Total nitrogen (TN) and Total phosphorus (Total P)
