

Supplementary materials

Vlaschenko et al. Bat assemblages are shaped by land cover types and forest age: a case study from Eastern Ukraine

Table S1 Classification of bats from *Vespertilionidae* family inhabiting Kharkiv region into different ecological groups, migratory status, and summer roost-sites selection (by Vlaschenko et al. 2021 Vlaschenko 2006; Strelkov and Il'in 1990 Russo et al. 2016; Dietz and Kiefer 2014; Boie and Dietz 2005).

Bat species	Migratory status	Roost-sites selection in breeding period	Ecological group
<i>M. daubentonii</i>	resident	tree cavities	water-associated
<i>M. dasycneme</i>	resident	roost in buildings	water-associated
<i>M. brandtii</i>	resident	tree cavities	forest-dwelling specialists
<i>M. nattereri</i>	resident	tree cavities	forest-dwelling specialists
<i>N. leisleri</i>	long-distance migrant	tree cavities	forest-dwelling specialists
<i>N. lasiopterus</i>	long-distance migrant	tree cavities	forest-dwelling specialists
<i>N. noctula</i>	partial migrant	tree cavities	forest-dwelling specialists
<i>E. serotinus</i>	resident	roost in buildings	urban- and rural-dwellers
<i>P. pygmaeus</i>	long-distance migrant	roosting both in trees and houses	generalists
<i>P. nathusii</i>	long-distance migrant	roosting both in trees and houses	generalists
<i>P. kuhlii</i>	resident	roost in buildings	urban- and rural-dwellers
<i>V. murinus</i>	long-distance migrant	roosting both in trees and houses	generalists
<i>Pl. austriacus</i>	resident	roost in buildings	urban- and rural-dwellers
<i>Pl. auritus</i>	resident	tree cavities	forest-dwelling specialists

Table S2. Results of the rarefaction analysis for all studied plots. s.e. - standard error, LCL - lower confidence limit, UCL - upper confidence limit.
