Table S3. The name, number and culture conditions of leaf samples for transcriptome analysis.

Sample Name	Organ	Numbering	Culture Conditions
High drought-tolerant capacity: NO. 228	Leaf	A_1-A_3	Drought Treatment
		B_1-B_3	Normal Culture
Low drought-tolerant capacity: NO. 026	Leaf	C_1-C_3	Drought Treatment
		D_1-D_3	Normal Culture

Note: Each sample is organized into 3 biological replicates, numbered 1-3.

Table S4. Number of drought-related transcription factors by species

Name	AP2	ARF	BES1	GRAS	MYB	NAC	WRKY	bHLH	bZIP
<i>Arabidopsis thaliana</i>	30	37	14	37	168	138	90	225	127
<i>Zea mays</i>	54	62	17	104	203	189	161	308	216
<i>Gossypium hirsutum</i>	59	69	24	164	441	306	238	427	224
<i>Nicotiana tabacum</i>	93	87	27	126	319	280	210	435	210
<i>Populus trichocarpa</i>	59	98	32	151	266	289	185	379	214
<i>Selaginella moellendorffii</i>	10	7	5	54	24	22	19	55	25
<i>Vitis vinifera</i>	19	17	6	43	138	71	59	115	47
<i>Salvia miltiorrhiza</i>	23	15	6	34	116	87	77	151	62
<i>Prunus persica</i>	25	40	17	83	163	186	85	282	157
<i>Cunninghamia lanceolata</i>	470	85	32	194	647	229	224	368	237

Note: The numbers of *Cunninghamia lanceolata* transcription factors were obtained from the transcriptome sequencing data, and other species were obtained from the PlantTFDB v5.0 (<http://plantfdb.cbi.pku.edu.cn/>)..

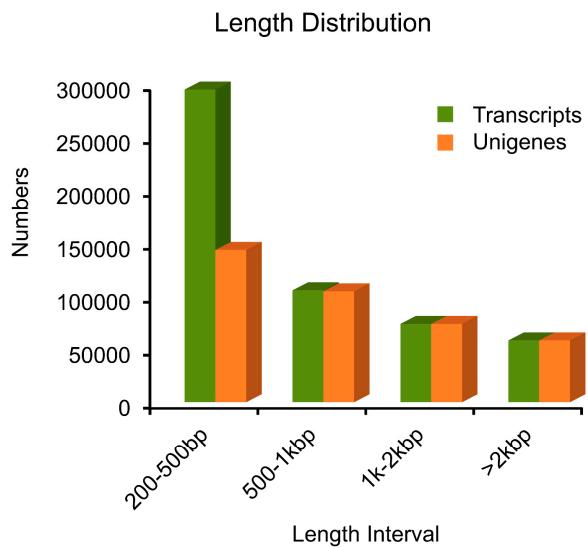

Fig. S1. Frequency distribution and gene annotation of different splicing lengths among different Chinese fir clones. The abscissa is the splice transcript/gene length interval, and the ordinate is the numbers of occurrences of splice transcripts/genes of each length.

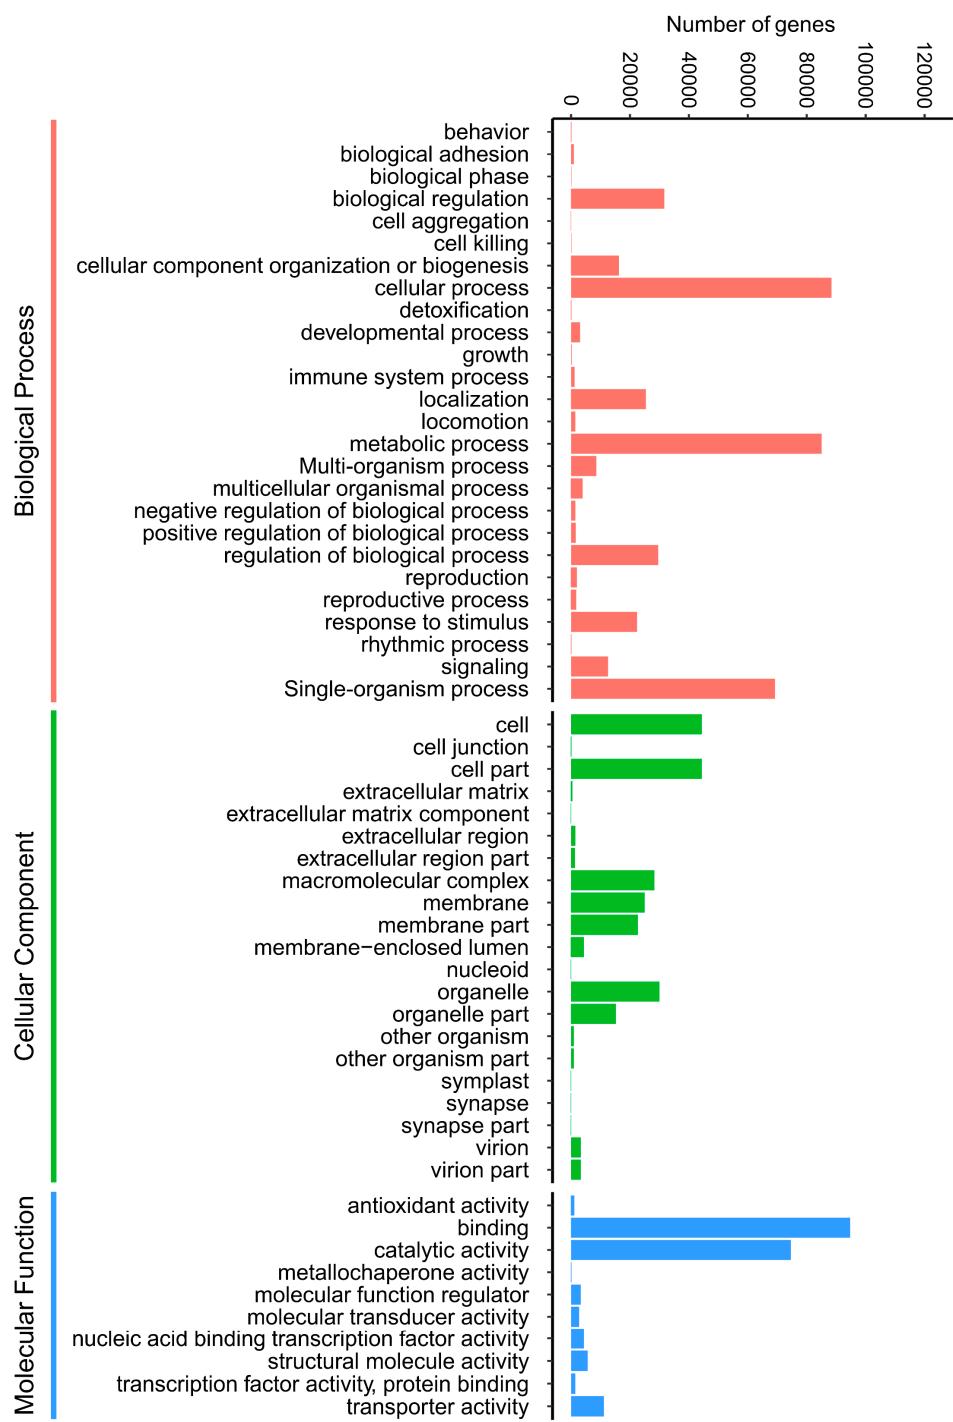

Fig. S2. Gene functional classification in GO database among different Chinese fir clones. The classifications are shown in three main categories and fifty seven groups. The three classifications represent the three basic classifications of Go term (from top to bottom are biological processe, cellular component, and molecular function).

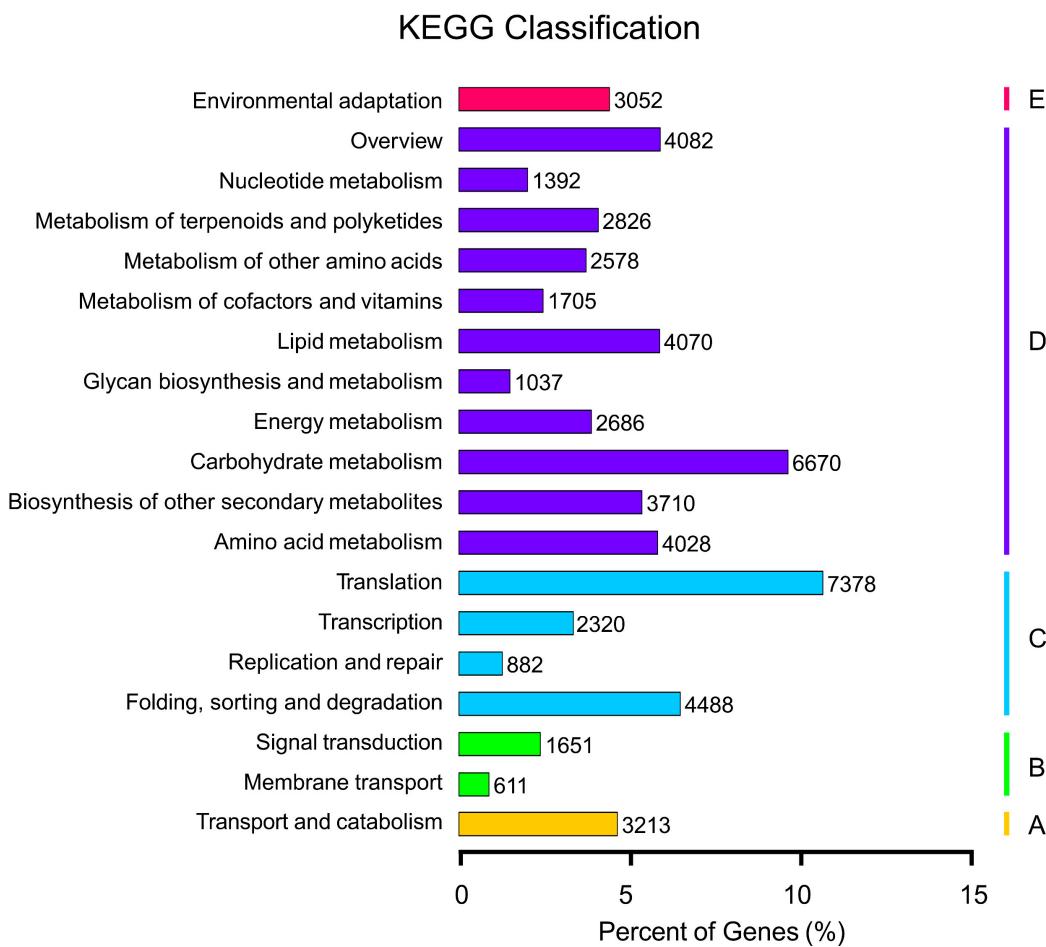

Fig. S3. Gene functional classifications in KEGG database among different Chinese fir clones. The genes of Chinese fir leaves involved in KEGG metabolic pathway can be divided into 5 categories and 19 secondary branches.

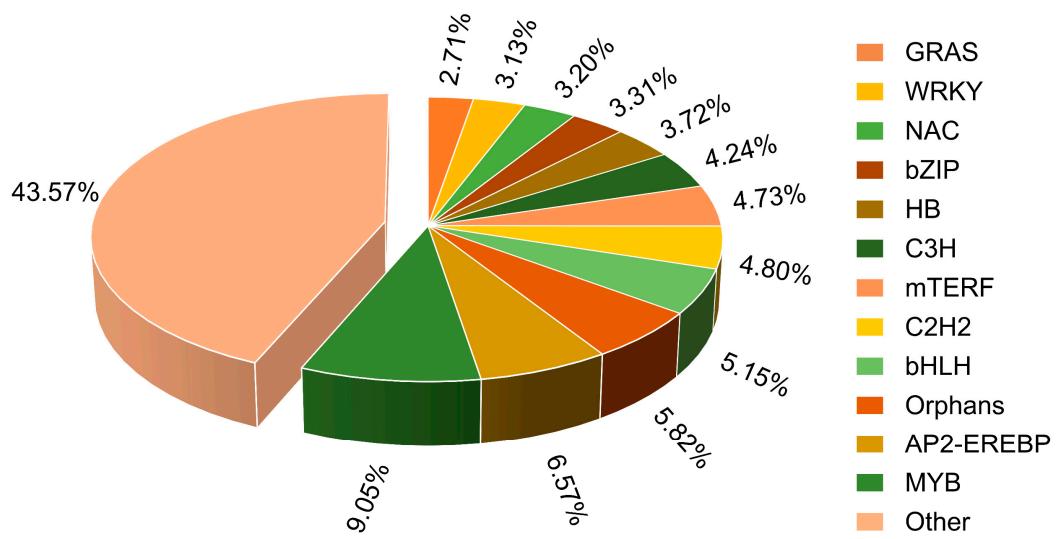

Fig. S4. Classifications of transcription factors of leaves among different Chinese fir clones.

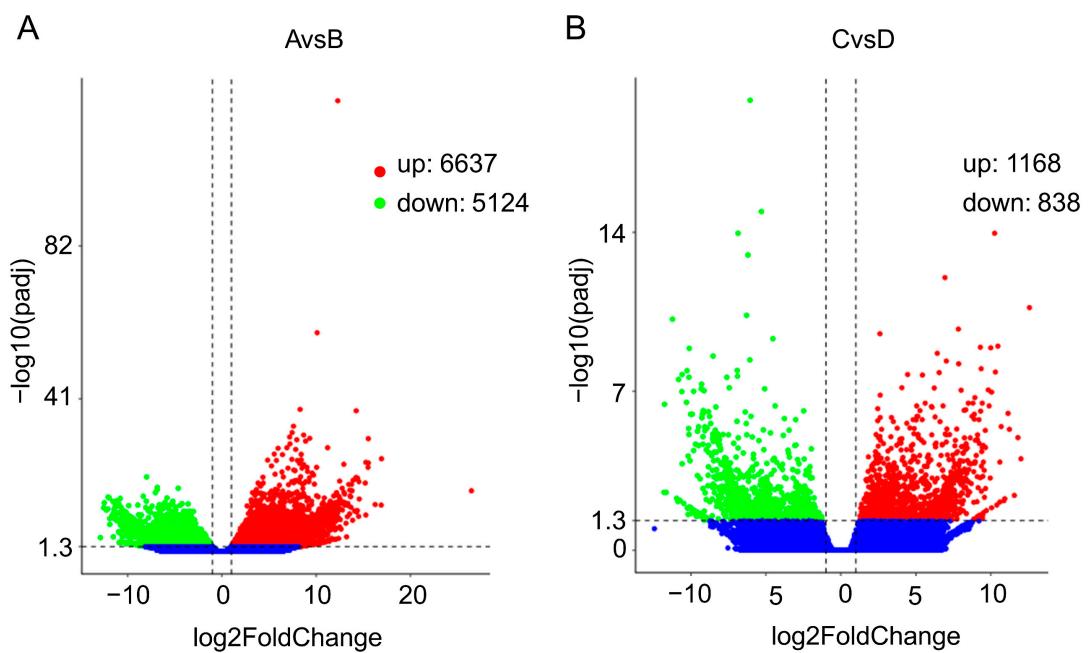

Fig. S5. Analysis of differentially expressed genes (DEGs) of the same Chinese fir clone under drought stress and normal culture. The screening conditions for differential genes were $\text{padj} < 0.05$ and $|\log_{2}\text{FoldChange}| > 1$. Abscissa is the change of gene expression multiple in different samples; ordinate is the statistical significance of the change of gene expression. The greater the $-\log_{10}$ is, the more significant difference is between drought stress and CK. Dot represents gene, and blue dots represent no significant difference. Red dots represent significant up regulation, and green dots represent significant down regulation. A, C are leaf DEGs in No. 228 and No. 026 under drought stressed, and B, D are leaf DEGs in No. 228 and No. 026 under normal conditions.

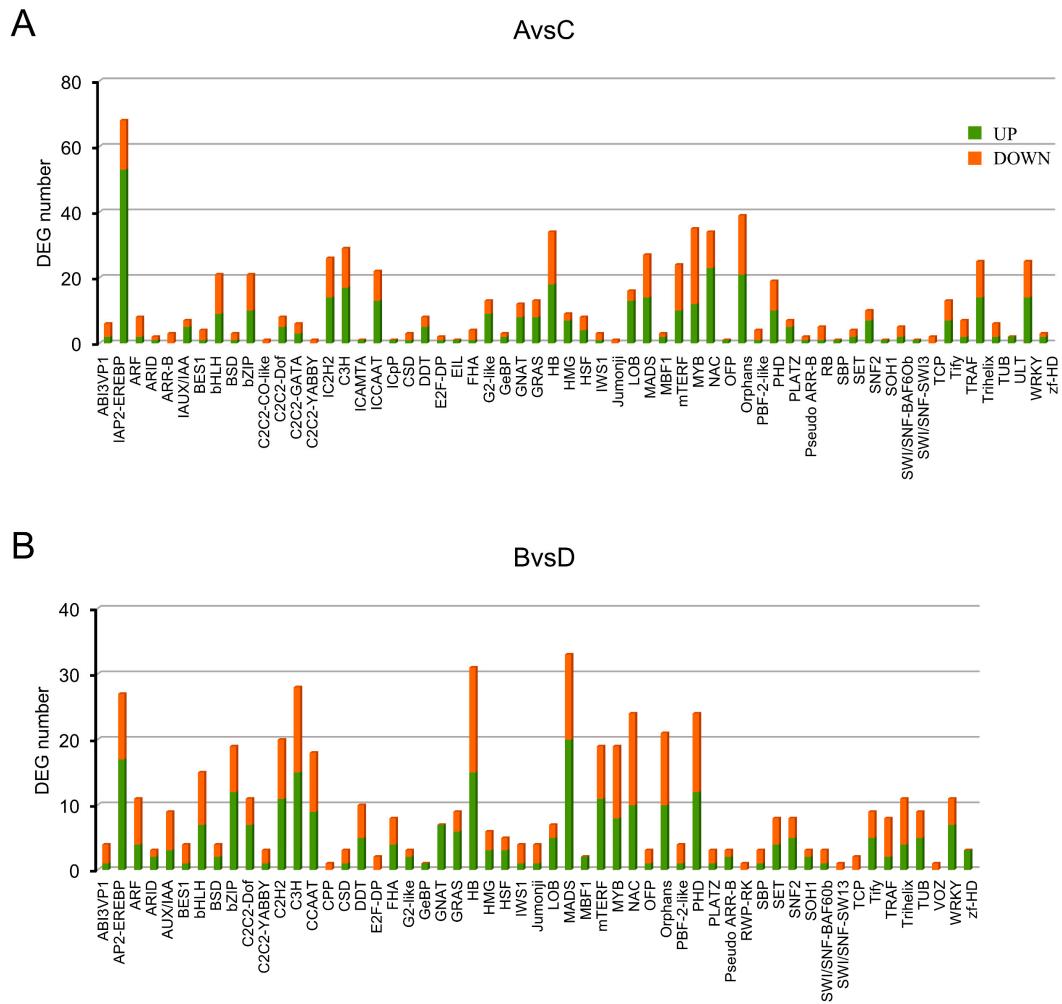

Fig. S6. Differential expressions of transcription factors among different Chinese fir clones under drought stress. The abscissa is the type of transcription factors that are differentially expressed in different comparison groups, and the ordinate is the number of transcription factors. A vs C were the comparisions of leaf DEGs between No. 228 and No. 026 under drought stresse, and B vs D were the comparisions of leaf DEGs between No. 228 and No. 026 under normal conditions.

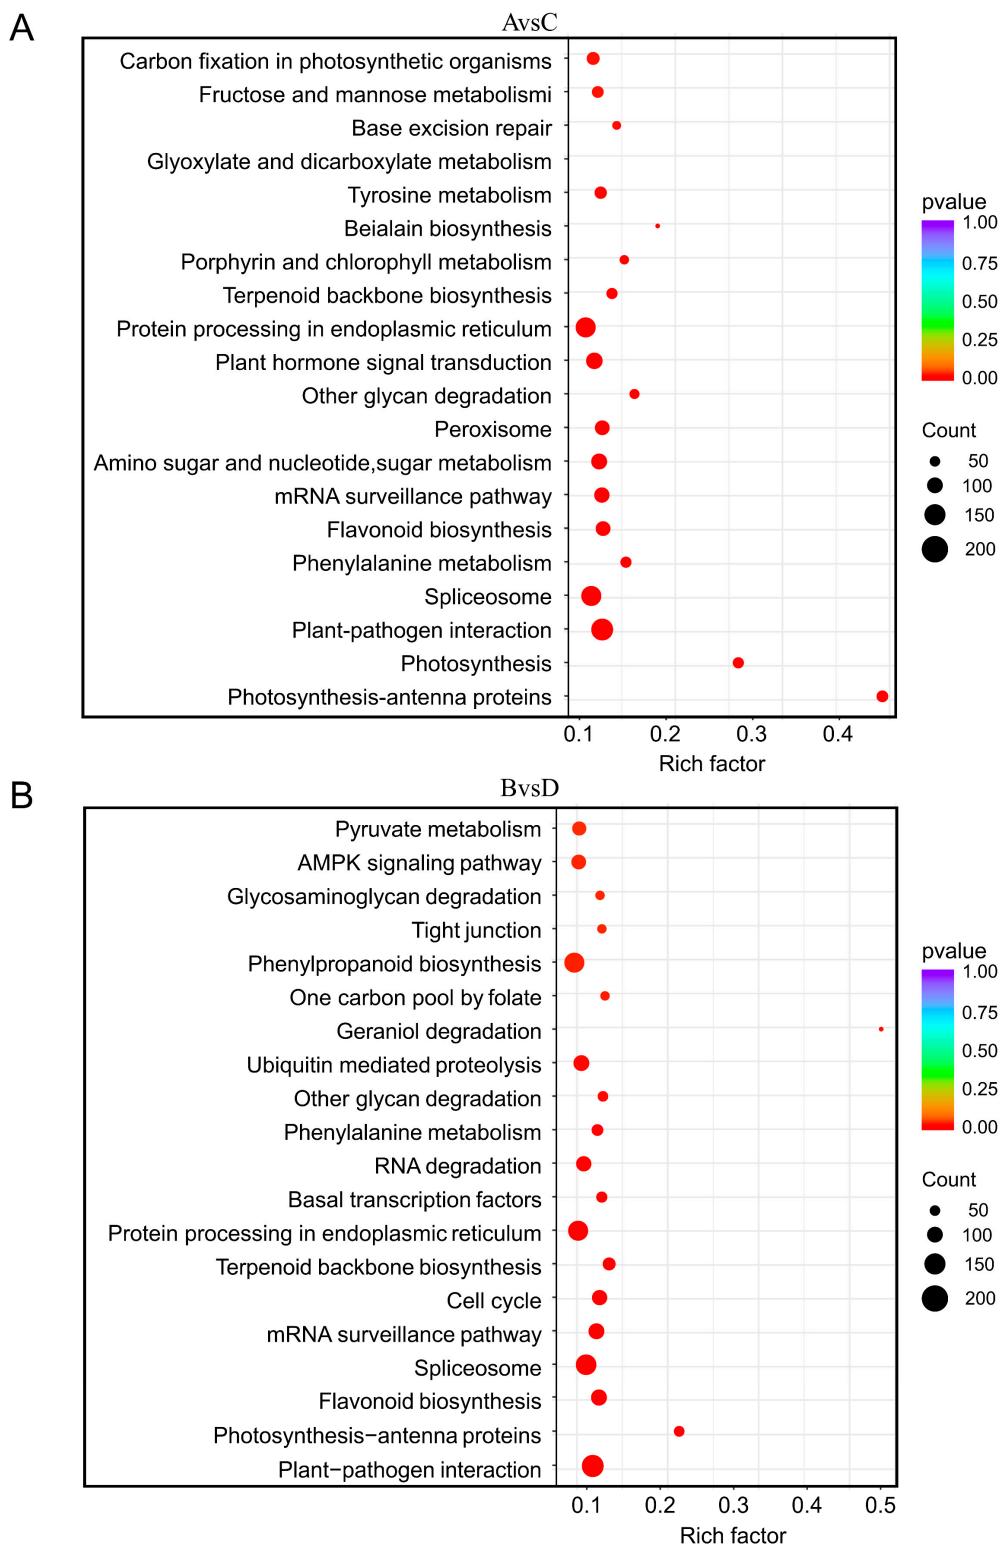

Fig. S7. The scatter plot of differential gene in KEGG pathway enrichment. The ordinate represents the name of the pathway, and the abscissa represents the rich factor corresponding to the pathway. The p-value is represented by the dot color , and the smaller the pvalue is, the color is closed to red. The number of differential genes contained in each pathway is expressed by the dot size. A vs C were the comparisions of leaf DEGs between No. 228 and No. 026 under drought stress, and B vs D were the comparisions of leaf DEGs between No. 228 and No. 026 under normal conditions.
