**Supplementary Figure S1.** Sequence alignment of the HECT domain of all the identified HECT proteins in *Populus trichocarpa*, *Arabidopsis thaliana*, *Glycine max*, *Oryza sativa*, *Zea mays* and *Triticum aestivum*. The HECT conserved domain (PF00632) of all the putative HECT proteins were analyzed to identify the conserved active site residues. The triangle indicates the conserved active site cysteine residue.
