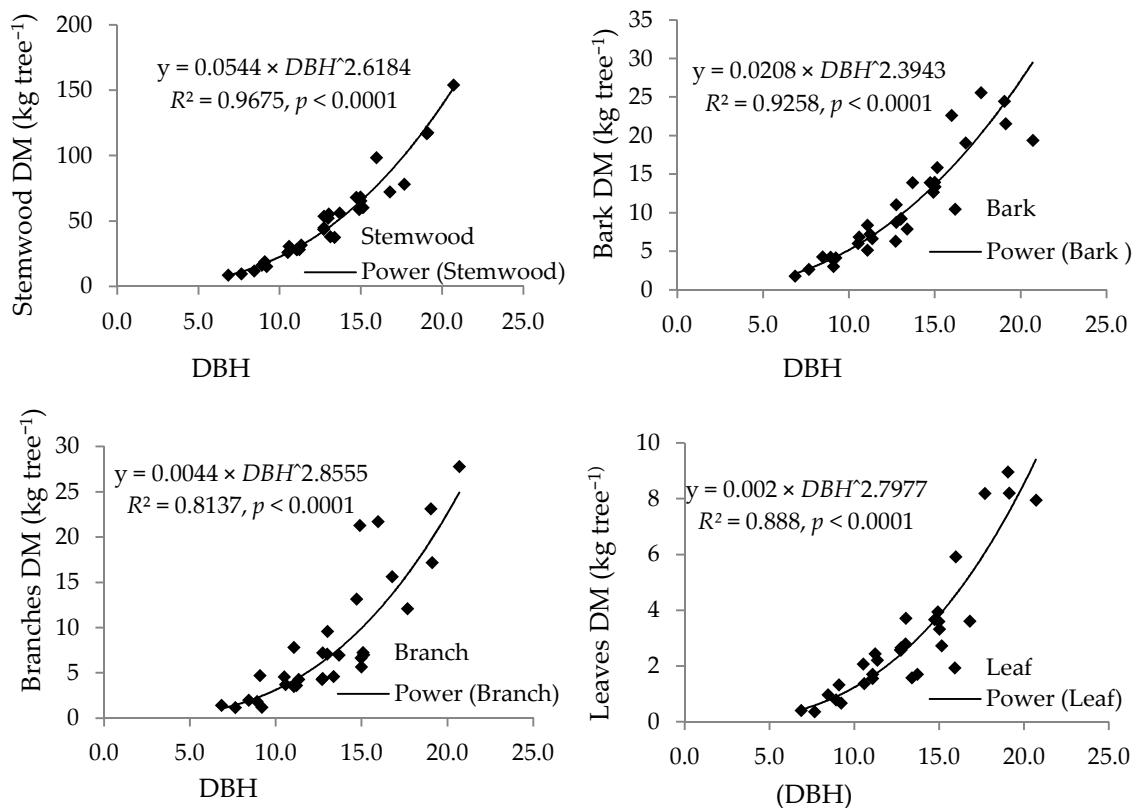

Figure S1. The allometric relationships between dry biomass of stand components and tree diameter (DBH, cm). DM is dry matter. $N = 30$.

Table S1. Nutrient release (%) from the leaf component over the 540-day period, nutrient release constant (k , year $^{-1}$), the proportion of explained variation (R^2), and root mean squared error ($RMSE$) and half-life ($t_{0.5}$, year) of nutrient degradation of *A. mangium* harvest residues in Northern Vietnam. $N = 10$ collection times.
