

Supplementary Figure 1.

Supplementary Figure 1. eIF2 α phosphorylation in CHSE-214 cells following IPN virus infection as positive control. The numbers represent time in hours post infection. eIF2 α was induced already at 3 hpi increasing in up to 24 hpi. Western blot was performed using rabbit antibodies against the phosphorylated form of eIF2 α . Equal amounts of protein were loaded in each lane (7 μ g total protein).
