

Figure S1. Phylogenetic analysis of the nt sequences of the 383-nt fragment of RdRp of the 2 positive samples identified in hedgehogs from China in this study.

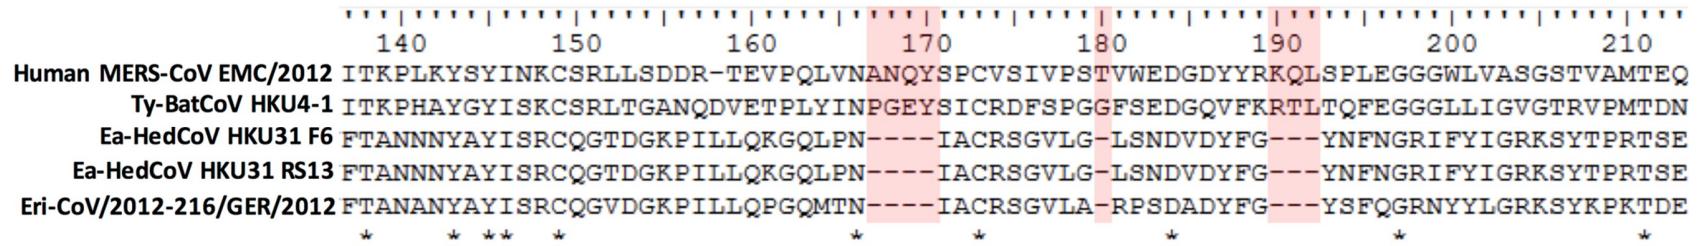

Figure S2. Multiple alignment of the amino acid sequences of the receptor-binding domain (RBD) of the spike protein of MERS-CoV and corresponding sequences in Ea-HedCoV HKU31 and other members of Merbecovirus. Asterisks indicate positions with fully conserved residues. The three amino acid deletions in Ea-HedCoV HKU31 compared to MERS-CoV and Ty-BatCoV HKU4 are highlighted in red color.

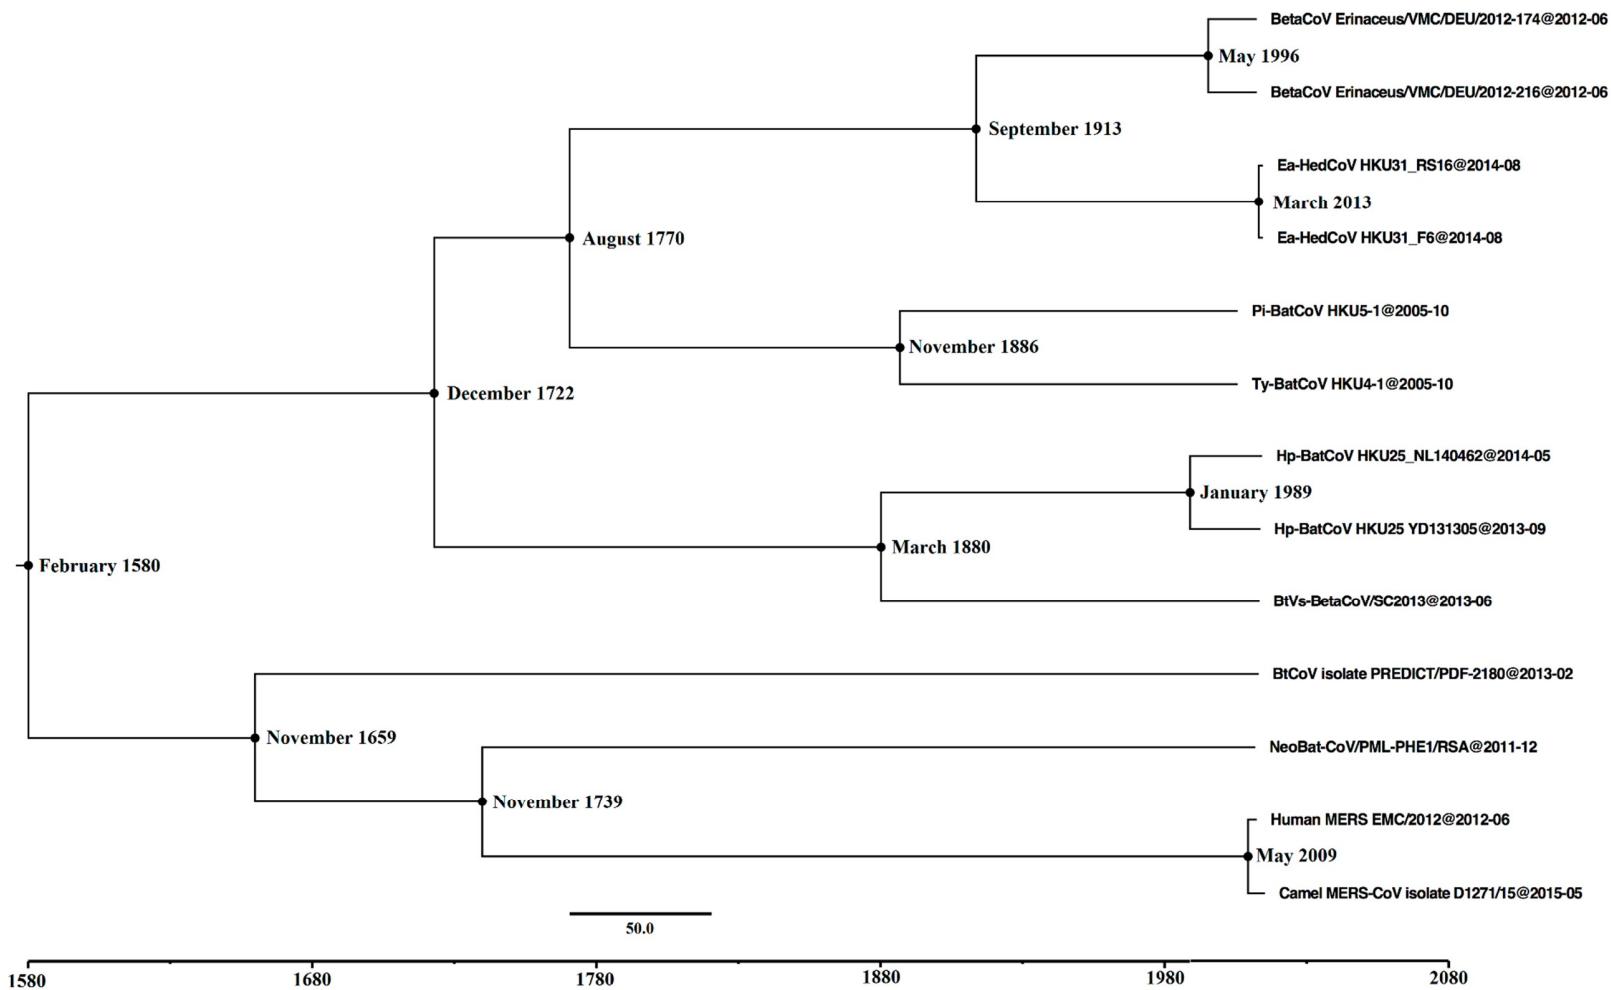

Figure S3. Estimation of tMRCA of members of Merbecovirus based on OrfLab. The mean estimated dates were labeled. The taxa were labeled with their sampling dates.
