

**A)**

**B)**

**Figure S1.** pH (**A**) and temperature (**B**) stability of vB\_StuS\_MMMA13. Phages particles were incubated at 25 °C, in a pH range from 2.0 to 12.0 with intervals of 1 unit (**A**), or at 25, 40, 50, 60, 70 and 80 °C (**B**). In both cases incubation times were of 60 min, and data are the mean of three independent experiments. Vertical black bars represent one standard deviation.
