Abstract: Jumbo phages have attracted much attention by virtue of their extraordinary genome size and unusual aspects of biology. By performing a comparative genomics analysis of 224 jumbo phages, we suggest an objective inclusion criterion based on genome size distributions and present a synthetic overview of their manifold adaptations across major biological systems. By means of clustering and principle component analysis of the phyletic patterns of conserved genes, all known jumbo phages can be classified into 3 higher order groups, which include both myoviral and siphoviral morphologies indicating multiple independent origins from smaller predecessors. Our study uncovers several under-appreciated or unreported aspects of the DNA replication, recombination, transcription and virion maturation systems. Leveraging, sensitive sequence analysis methods we identify novel protein-modifying enzymes that might help hijack the host-machinery. Focusing on host-virus conflicts, we detect strategies used to counter different wings of the bacterial immune system, such as cyclic nucleotide- and NAD^+-dependent effector-activation, and prevention of superinfection during pseudolysogeny. We reconstruct the RNA-repair systems of jumbo phages that counter the consequences of RNA-targeting host effectors. These findings also suggest that several jumbo phage proteins provide a snapshot of the systems found in ancient replicons preceding the last universal ancestor of cellular life.

Table of contents

Supplementary 1. Phyletic vector diagrams for various jumbo phage proteins/protein-domains families

- **1.1** Comprehensive phyletic vector diagram of 181 protein/protein domain families in 224 jumbo phages.
- **1.2** Comprehensive phyletic vector diagram of 181 protein/protein domain families in 154 jumbo phages that have non-redundant phyletic patterns.
- **1.3** Phyletic vector diagram of various replication and recombination proteins in a sample of jumbo phages.
- **1.4** Phyletic vector diagram of various proteins involved in transcription and transcriptional regulation.
- **1.5** Phyletic vector diagram of various proteins involved in Nucleotide metabolism.
- **1.6** Phyletic vector diagram of various proteins involved in Phage morphogenesis and phage structural proteins.
- **1.7** Phyletic vector diagram of proteins predicted to hydrolyze the host cell wall peptidoglycans.
- **1.8** Phyletic vector diagram of various proteins involved in RNA-based conflict systems.
- **1.9** Phyletic vector diagram of various proteins involved in miscellaneous conflict systems.
- **1.10** Phyletic vector diagram of various proteins involved in nucleotide and NAD+-centric conflict systems.
- **1.11** Phyletic vector diagram of various proteins involved in DNA modifications.

Supplementary 2. Multiple sequence alignments of various protein domain families described in the text.

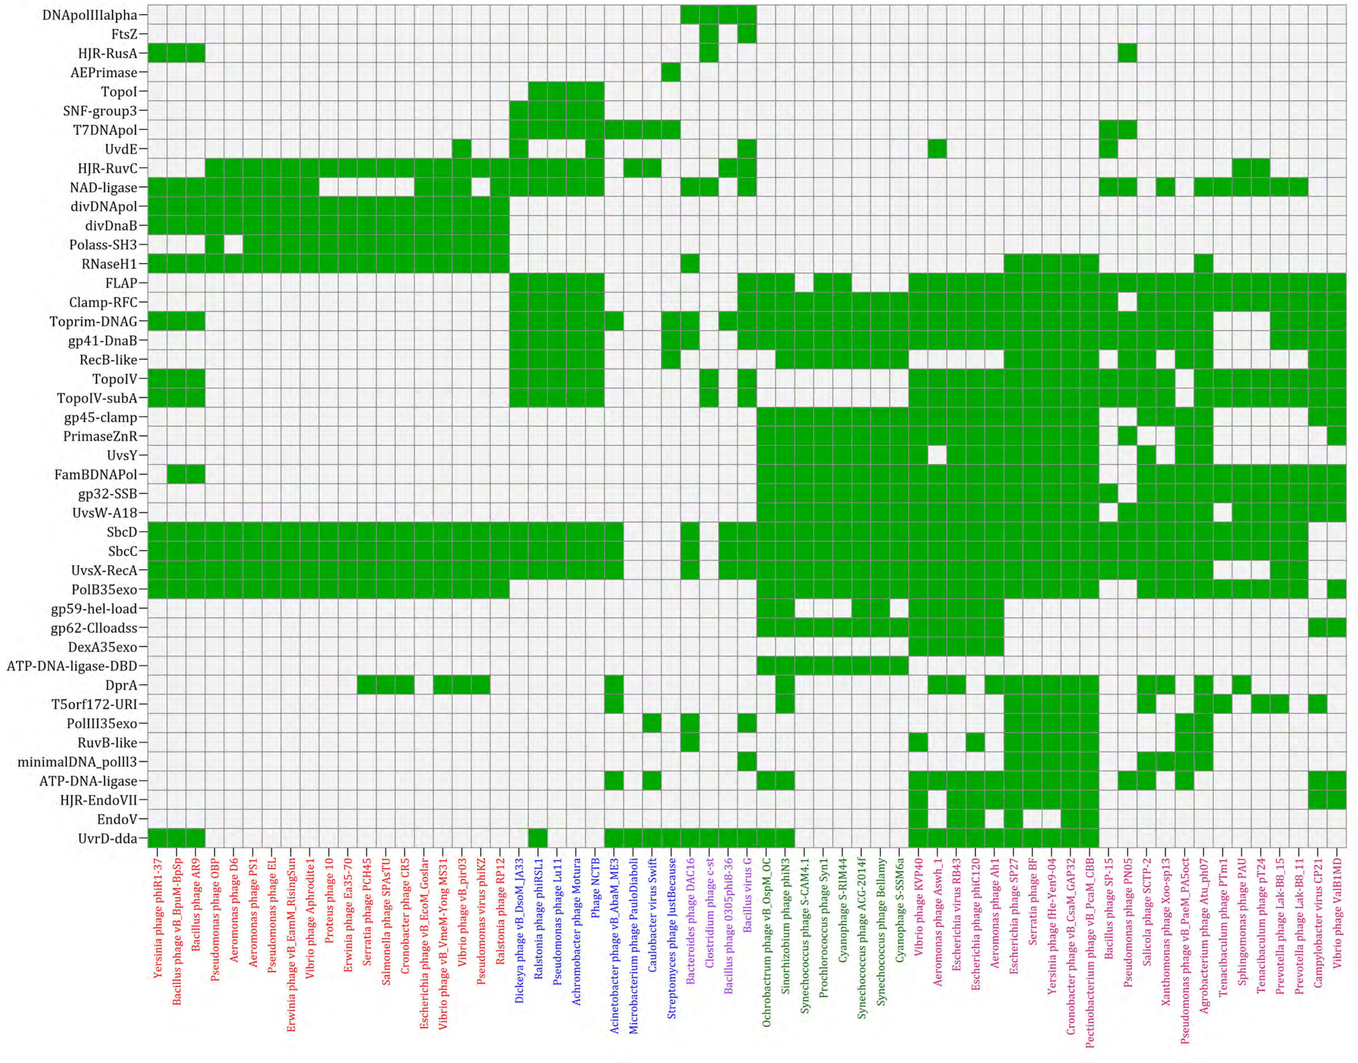
Supplementary 3. Counts of tRNA genes per genome in representative jumbo phages. The organism names, group type, and Genome assembly ids (GCA) are listed.

Supplementary 4. Relative gene positions of the 100 most frequent protein domains in a set of representative jumbo phage genomes.

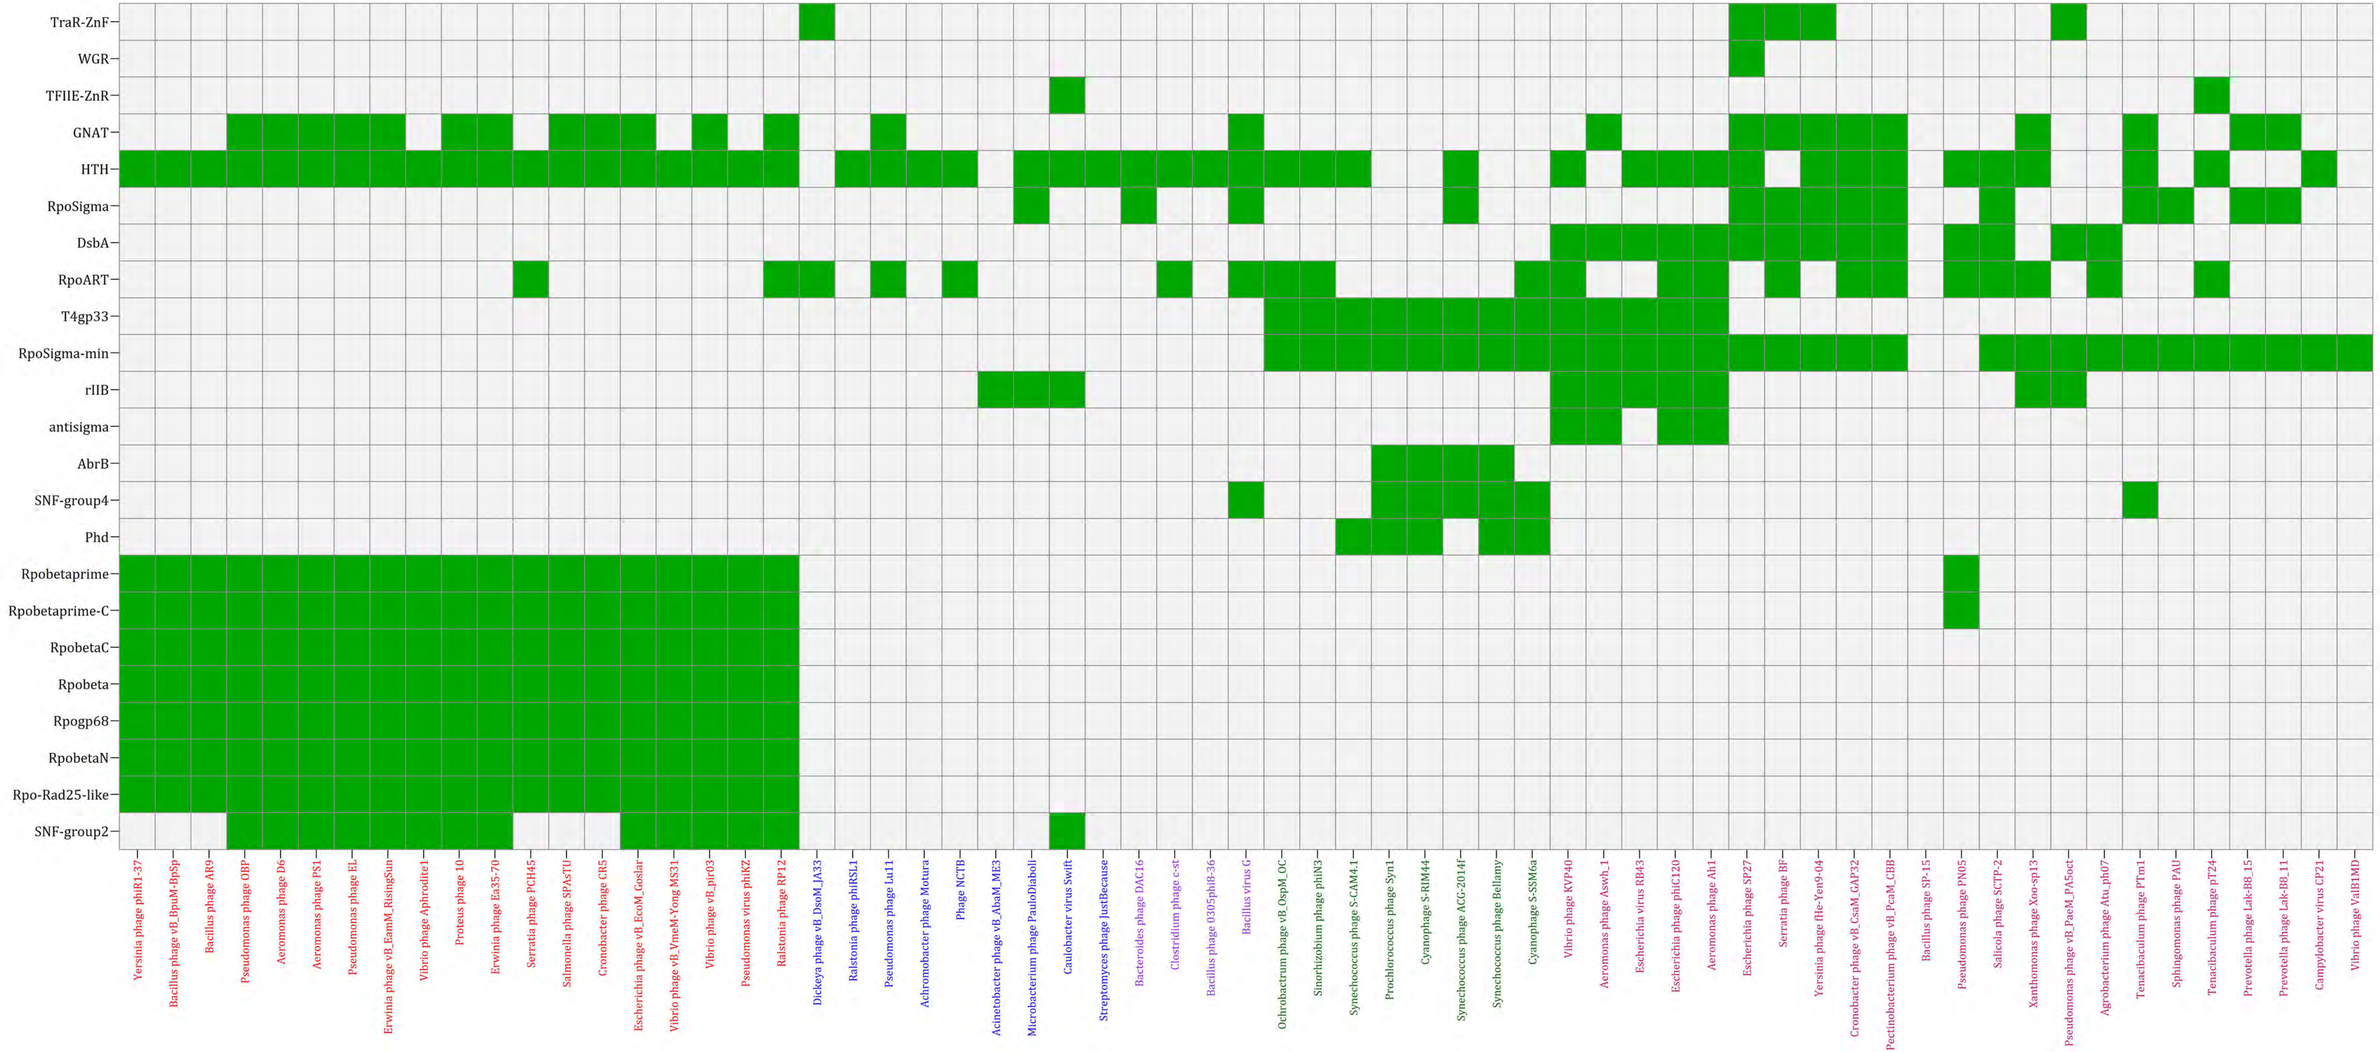
Supplementary 5. Sequence clusters of all proteins of the 224 jumbo phages genomes. The clusters were obtained by combining BLASTCLUST (with the length and score thresholds as 0.3 each) followed by manual curation of the clusters. The architectures shown in column 3 were obtained using a combination of pfam profiles, custom local profiles and case-by-case sequence analysis. Clusters have unique cluster ids. Cluster ids containing “000000”are proteins that group in the un-clustered tail belonging to the architecture/family in column 3.

Phyletic patterns of Phage proteins

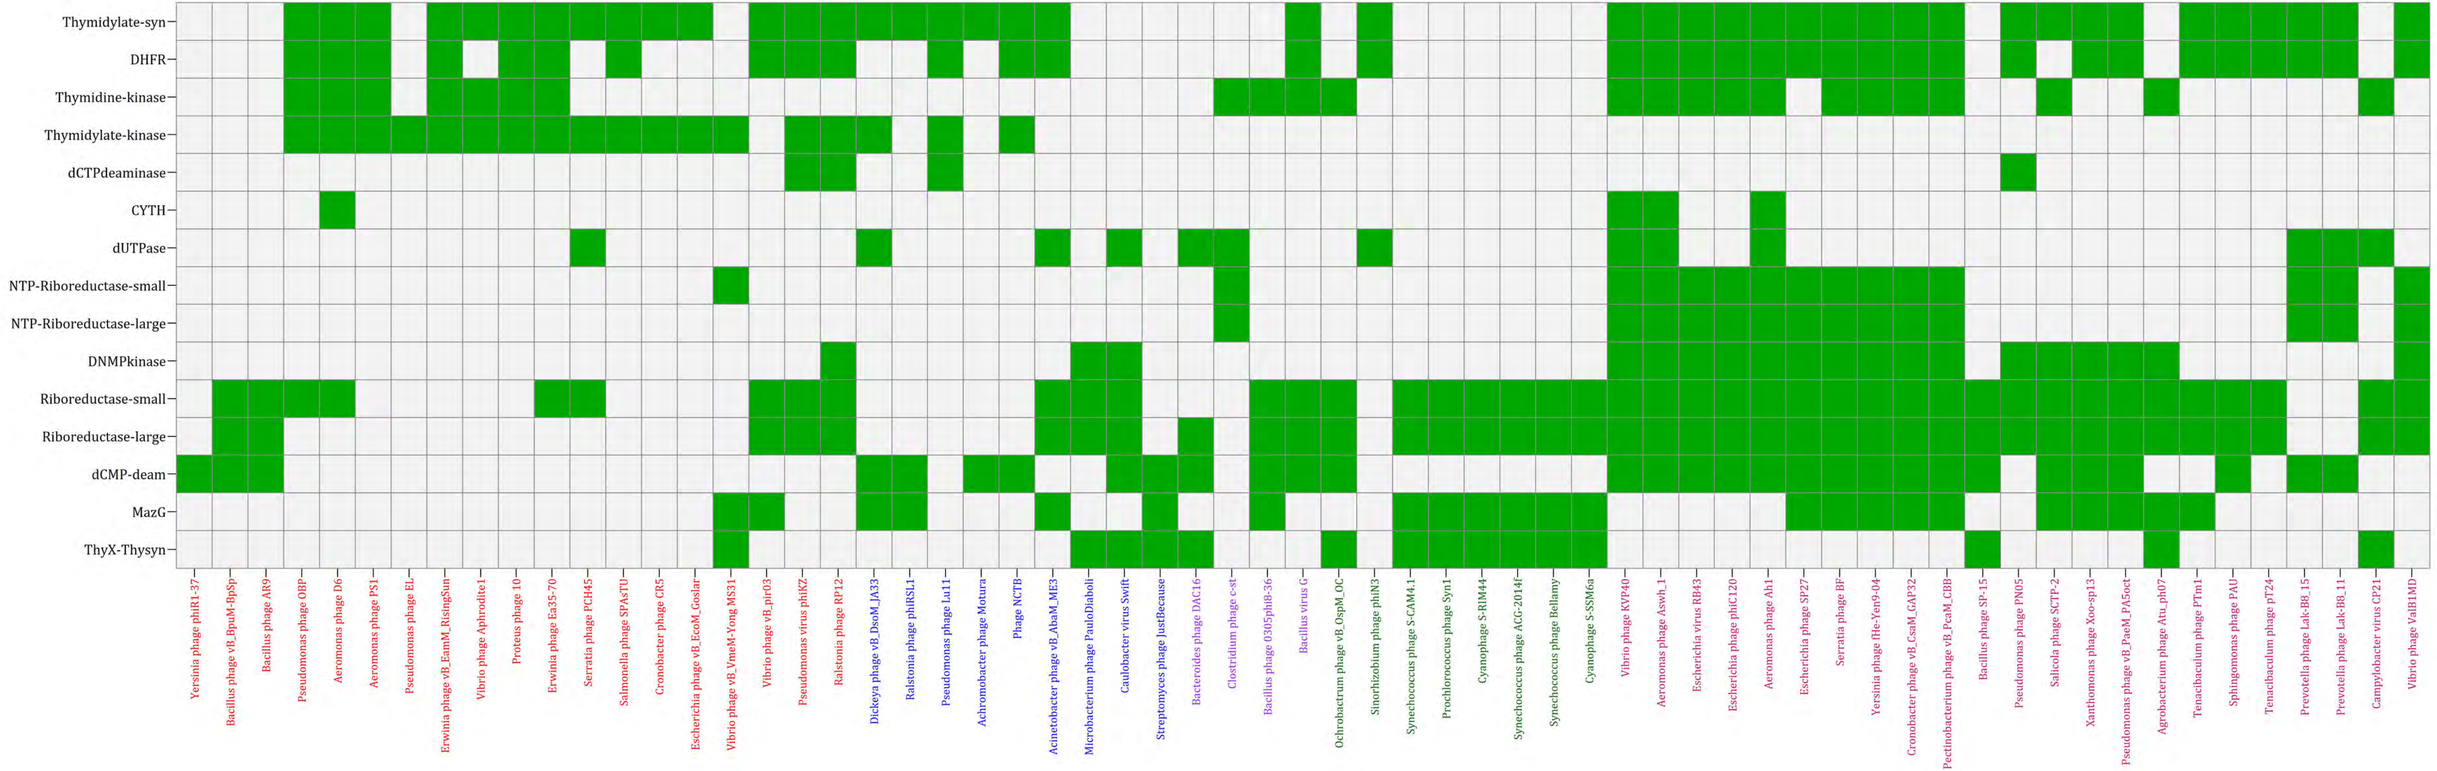
1.1 The phyletic patterns of 181 protein families in 224 phage genomes



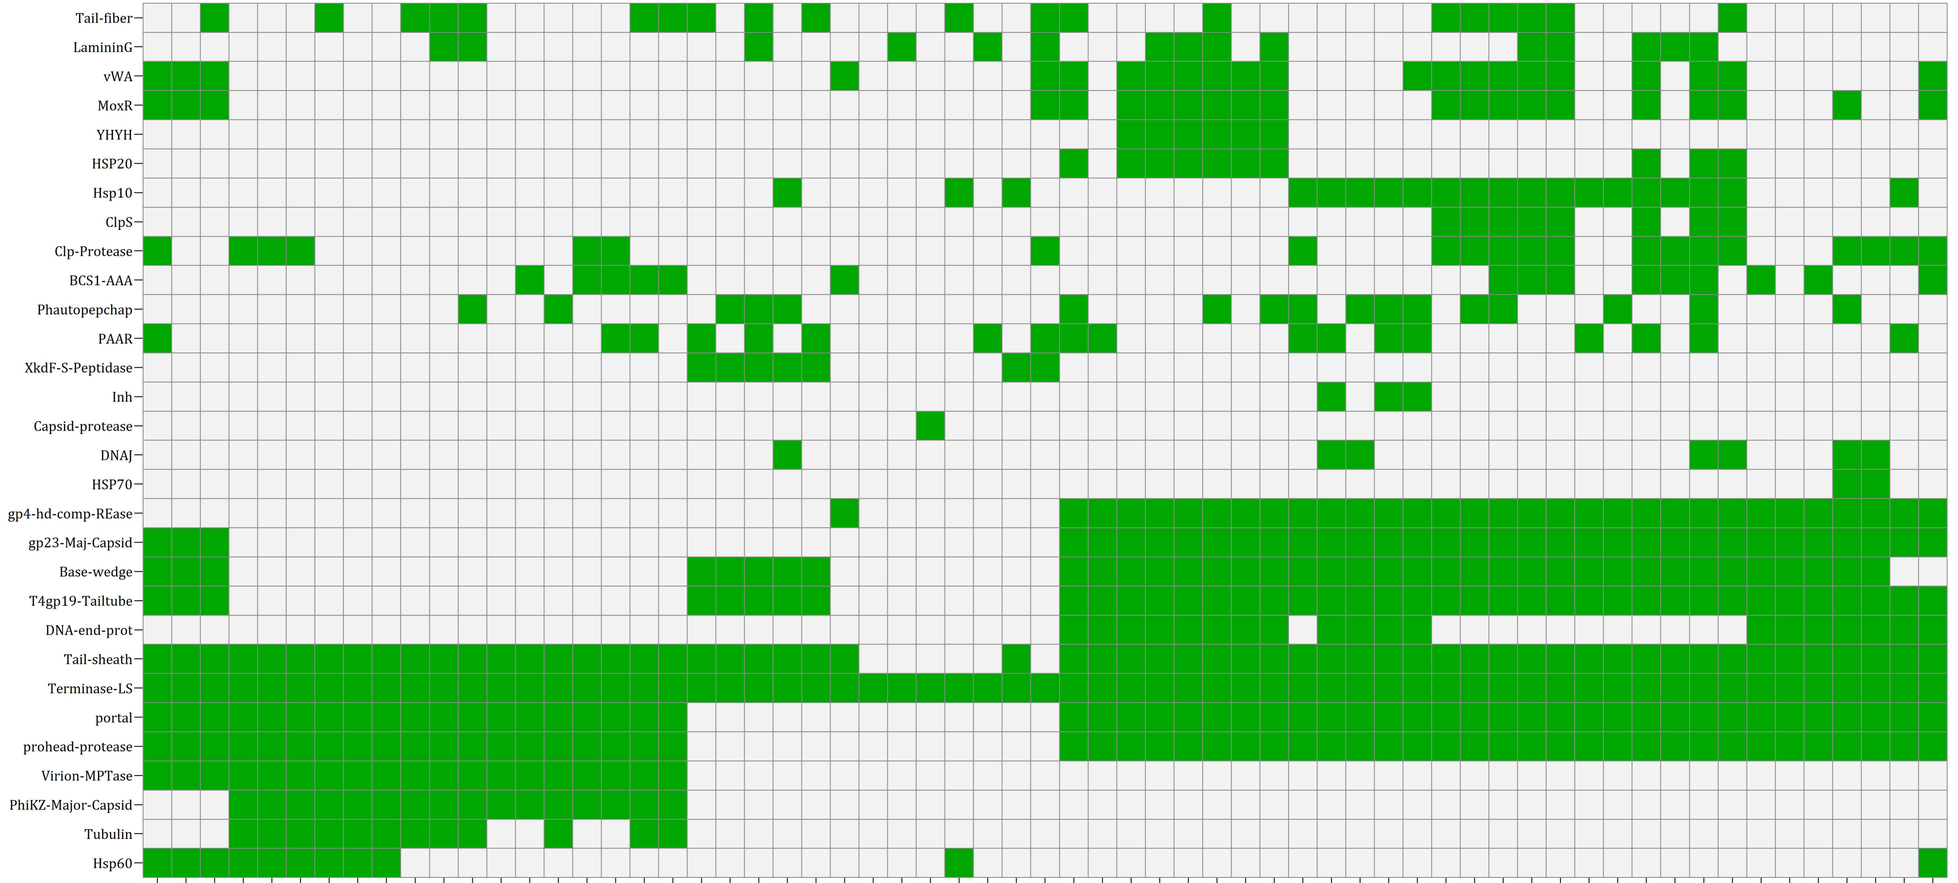
Phyletic patterns of Phage proteins



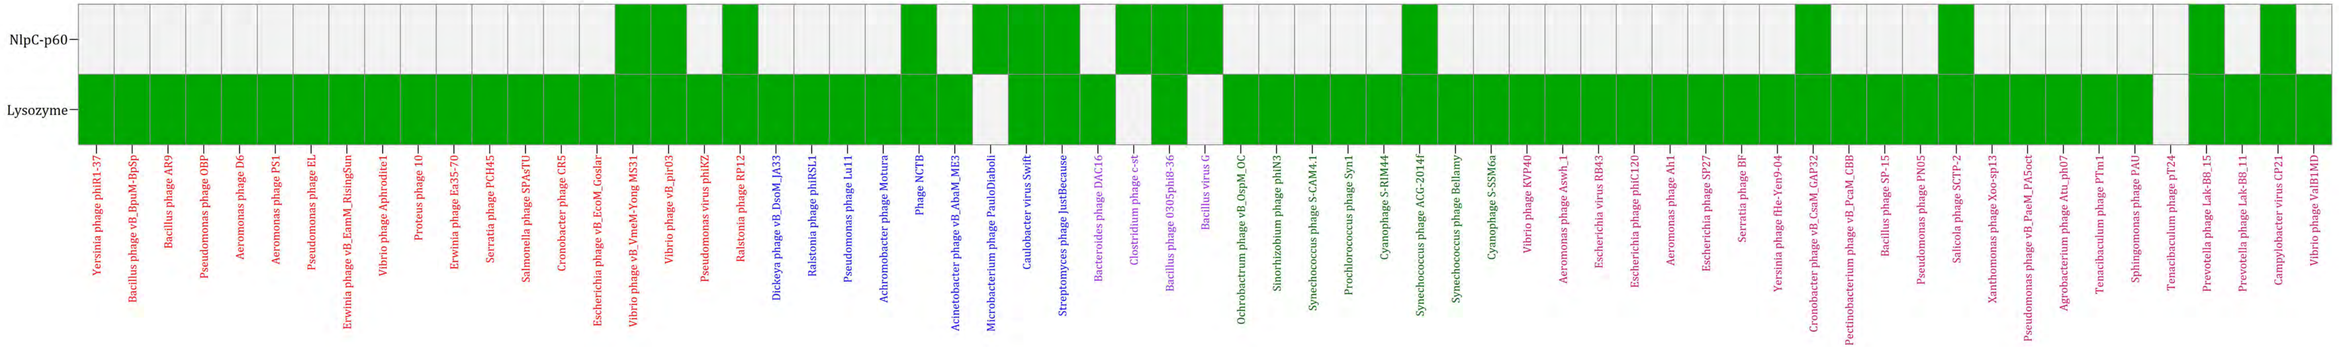
1.2 The phyletic patterns of 181 protein families in 154 phage genomes that show unique phyletic patterns



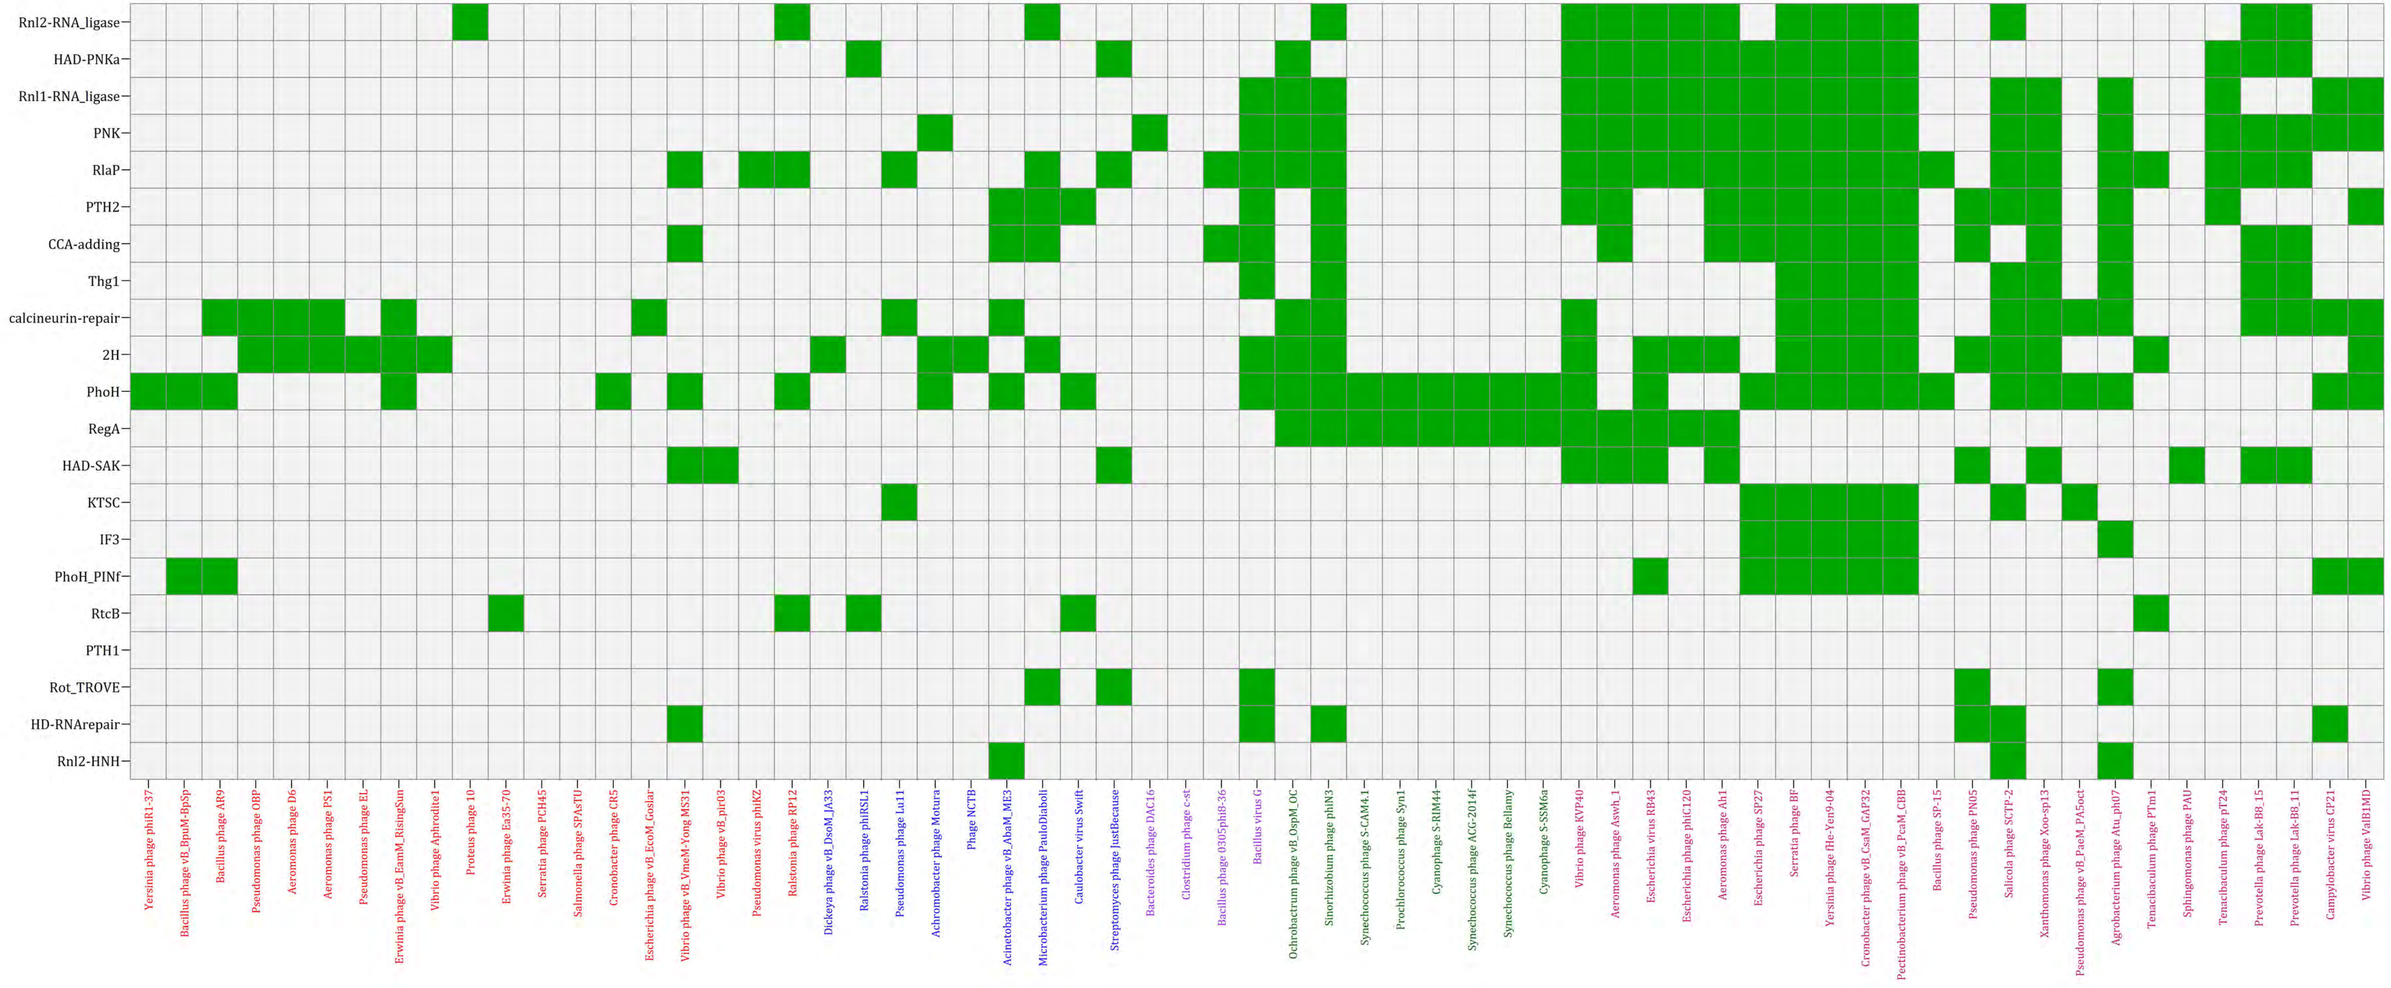
1.3 Phyletic patterns of Phage Replication proteins



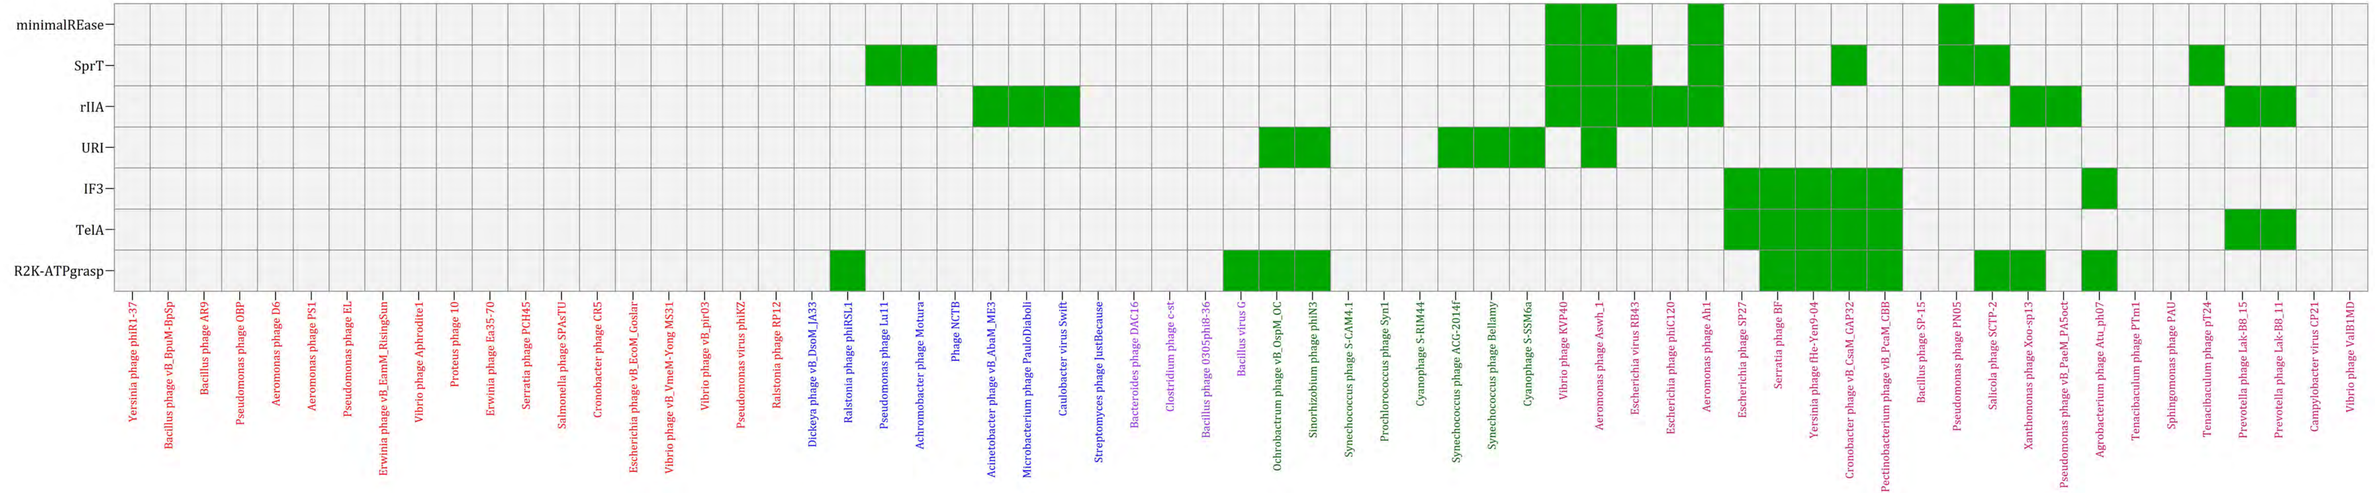
1.4 Phyletic patterns of Phage Transcription proteins



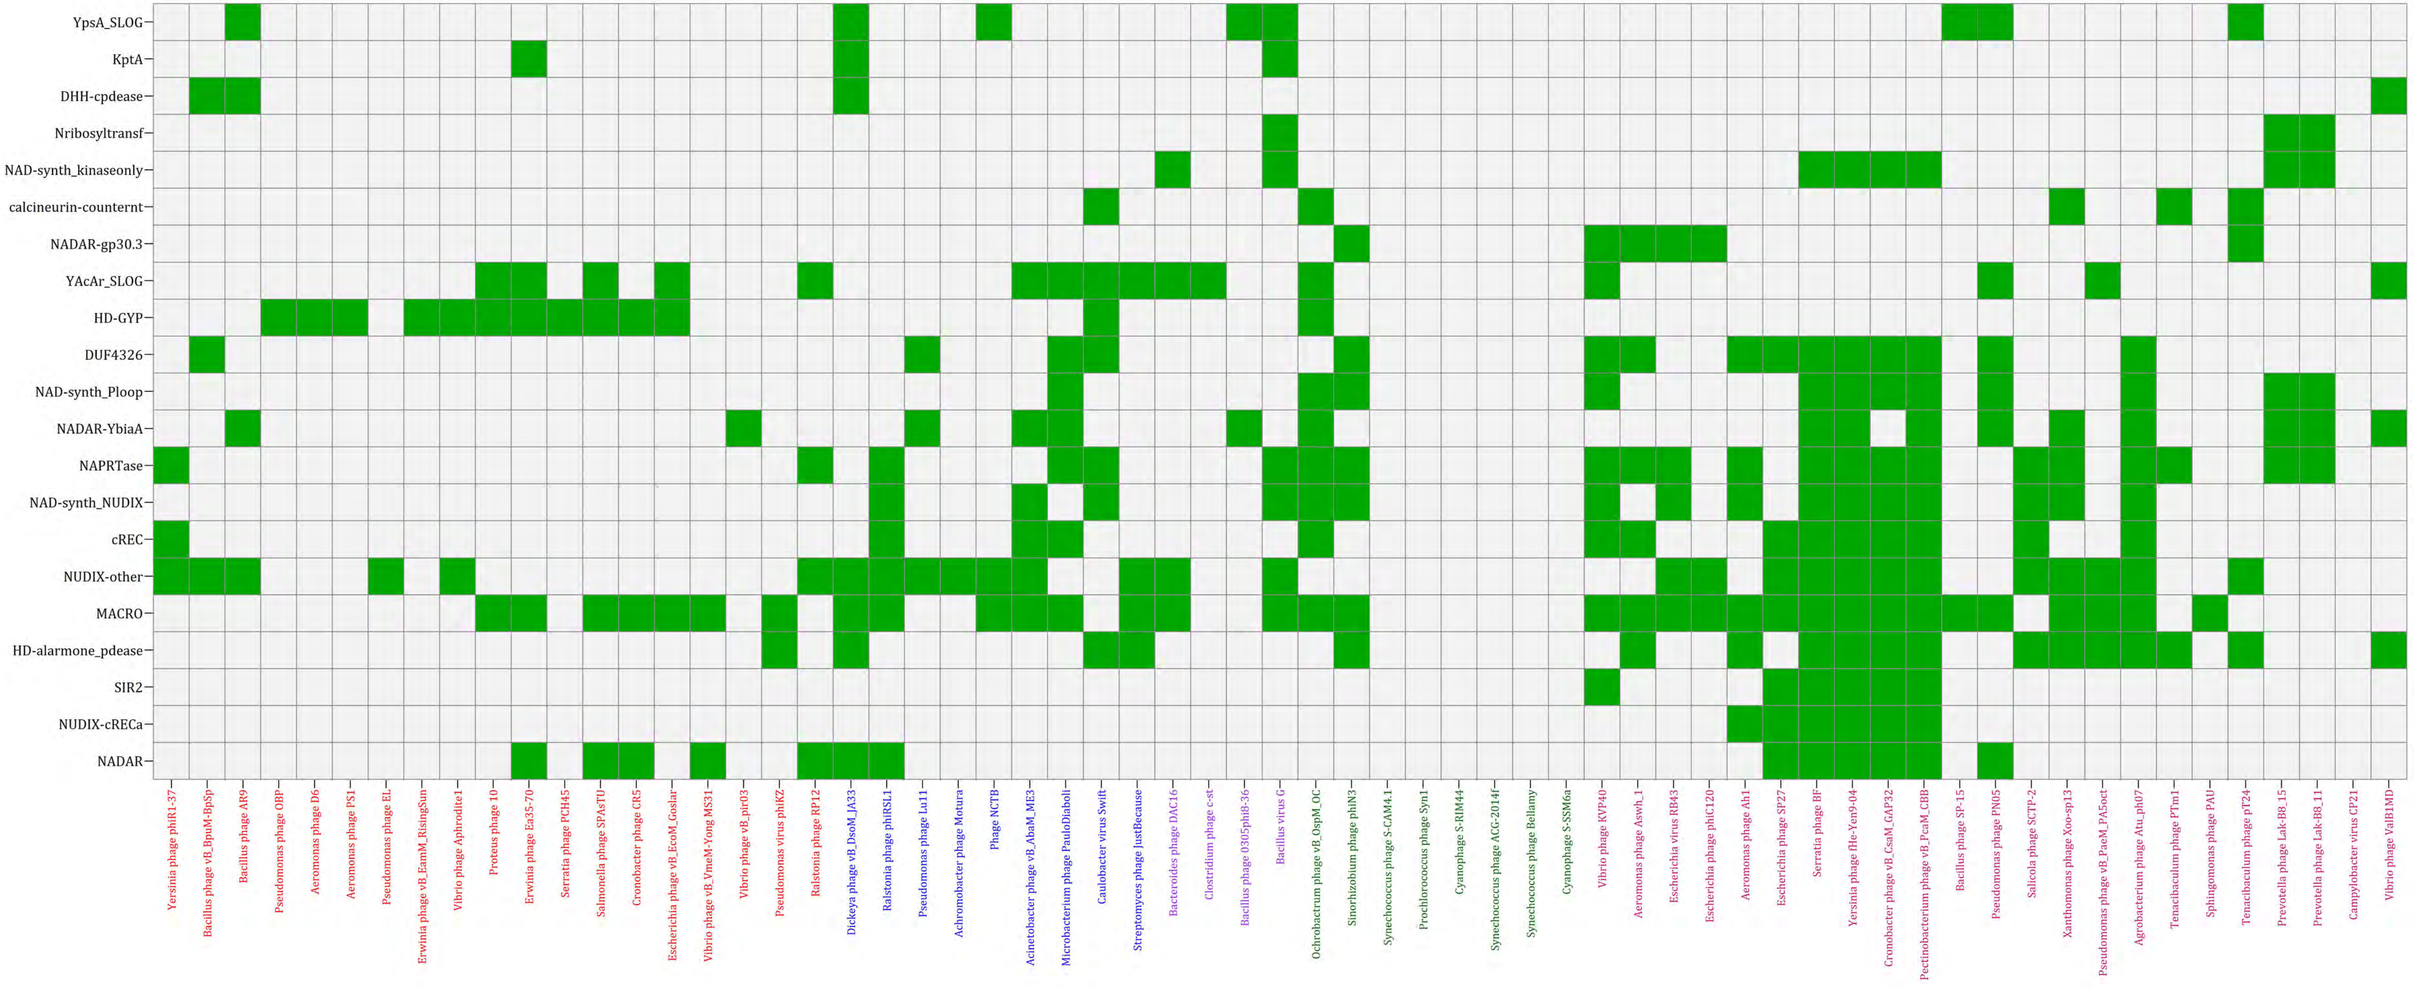
1.5 Phyletic patterns of Phage Nucleotide proteins



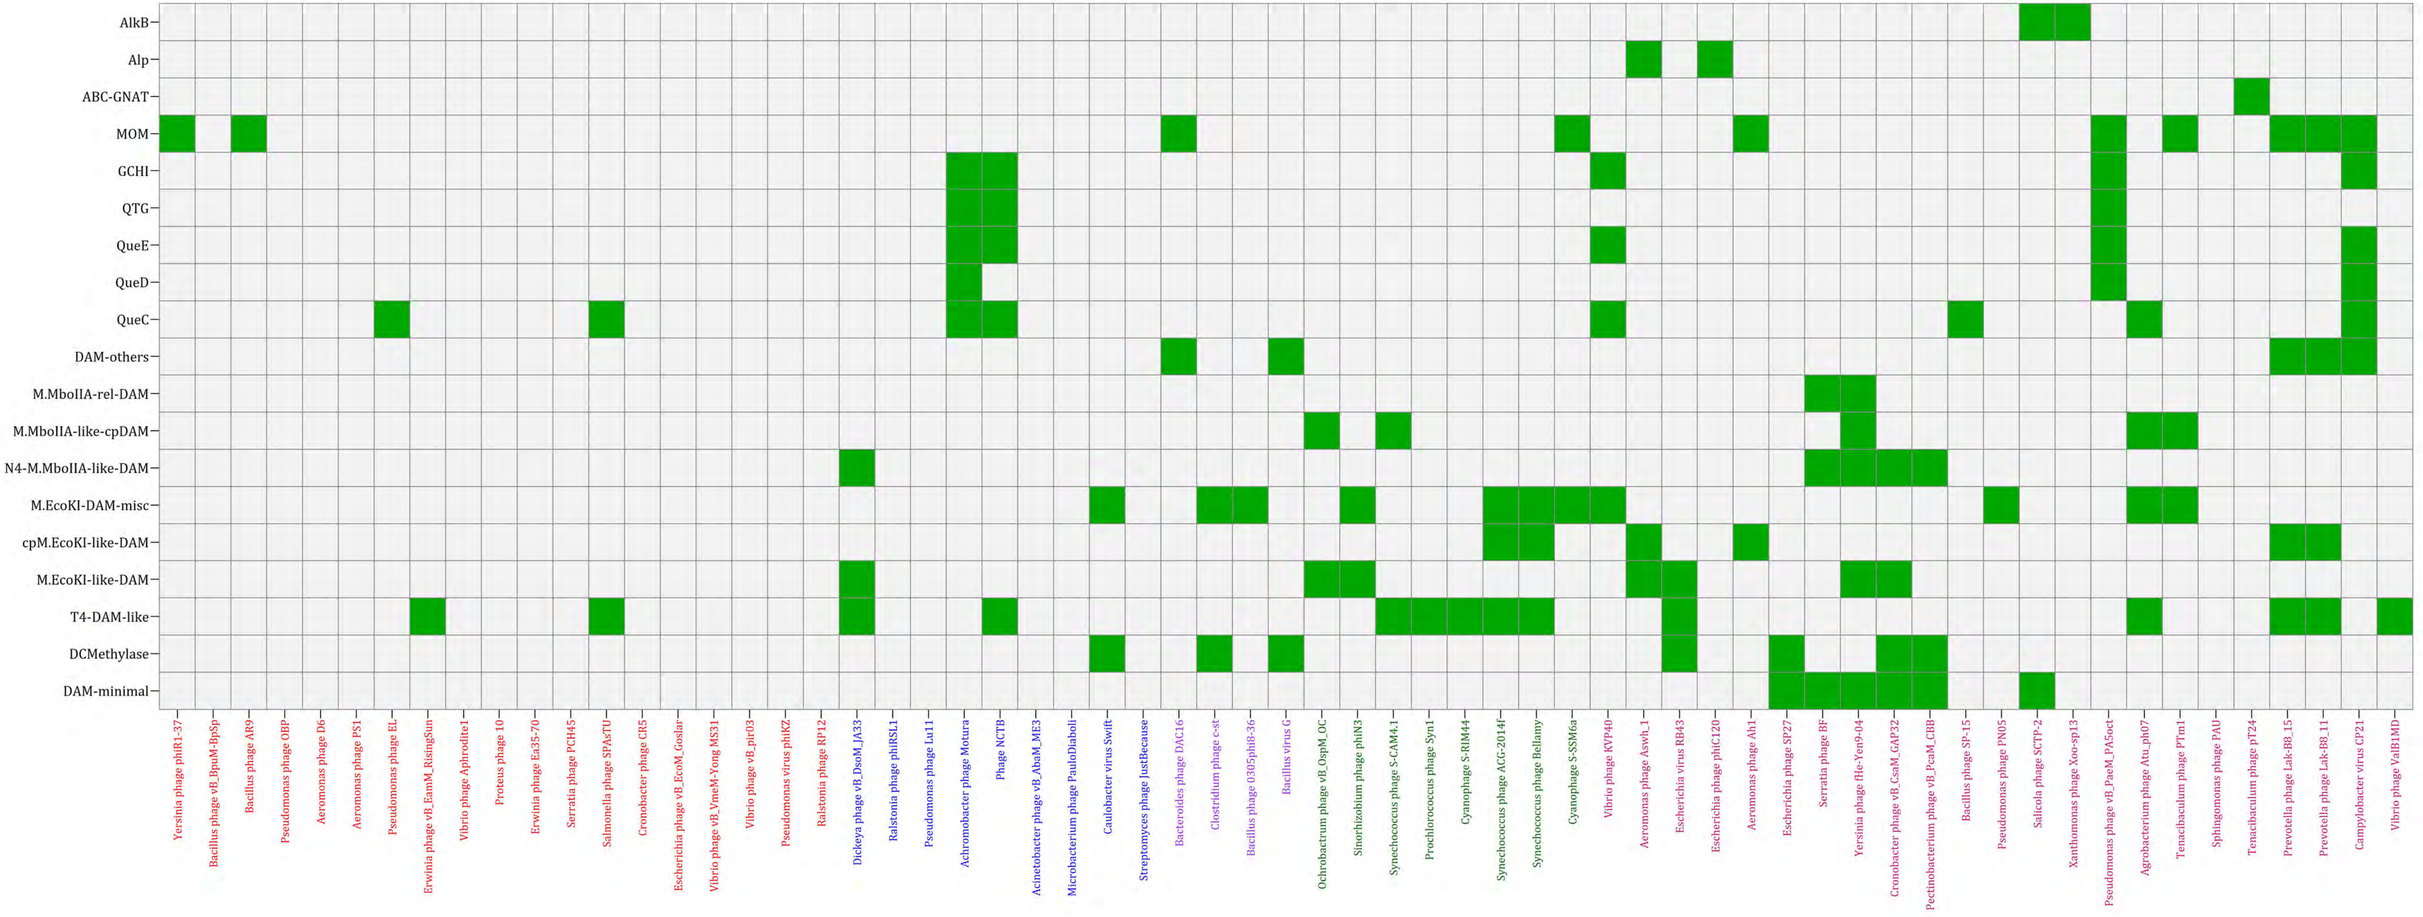
1.6 Phyletic patterns of Phage Structural proteins



1.7 Phyletic patterns of Phage Cellwallpeptidase proteins



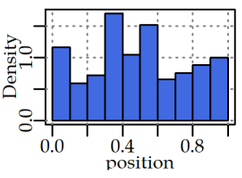
1.8 Phyletic patterns of Phage RNA proteins

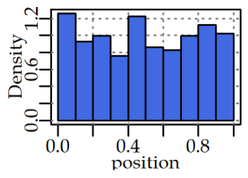


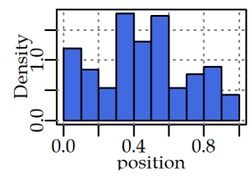
1.9 Phyletic patterns of Phage conflict proteins

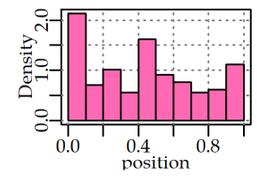
1.10 Phyletic patterns of Phage counter-nt proteins

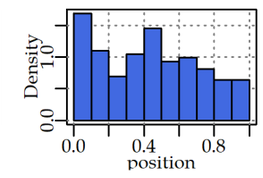
1.11 Phyletic patterns of Phage DNAmodification proteins

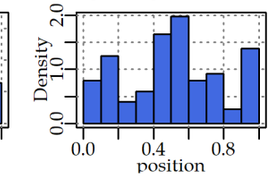


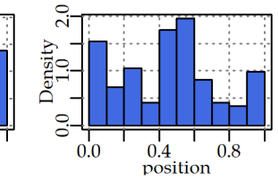


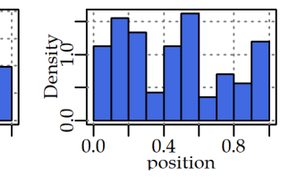


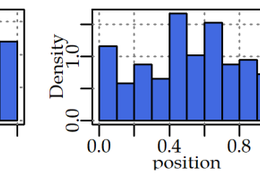


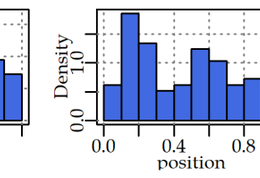


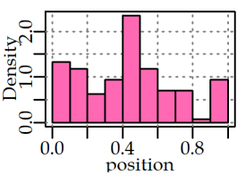


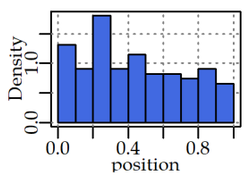


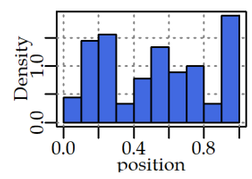


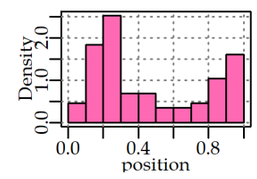


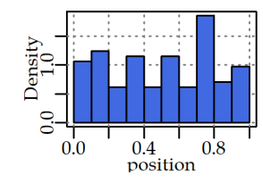


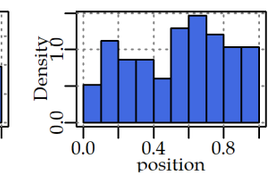


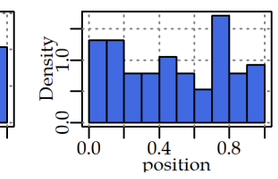


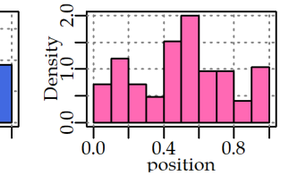


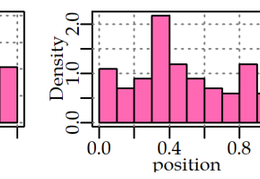


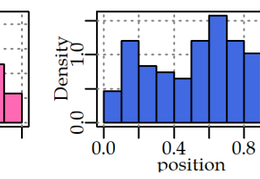


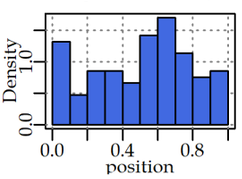


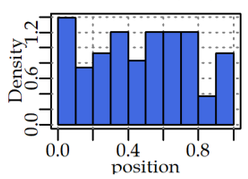


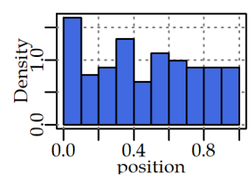


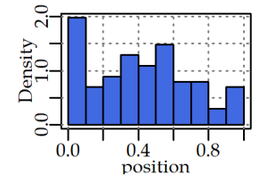


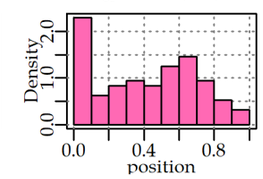


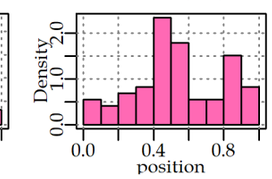


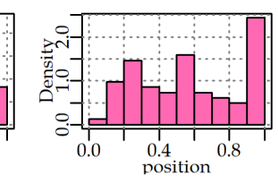


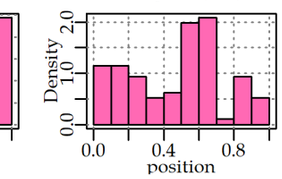


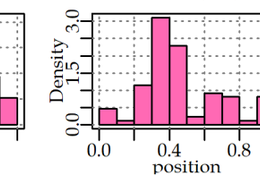


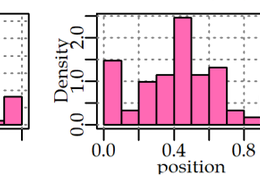


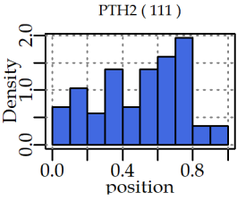


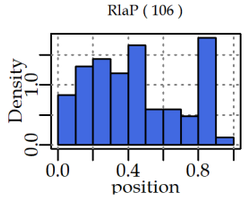


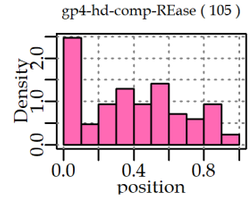


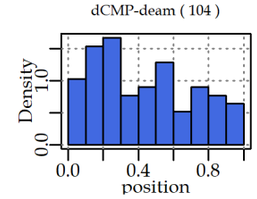


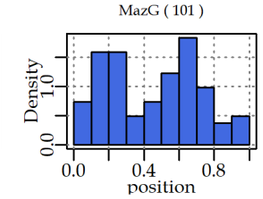


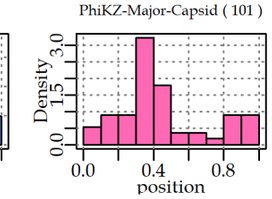


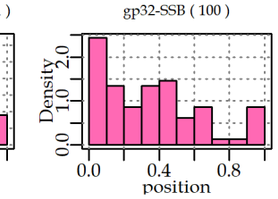


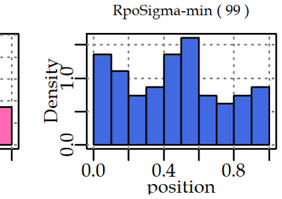


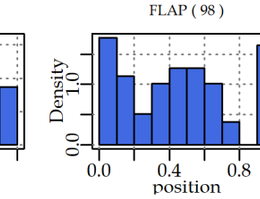


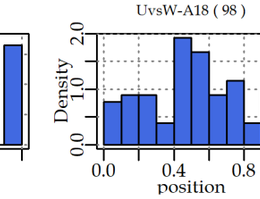












Supplementary 3: Counts of tRNA genes per genome in representative jumbo phages
