Figure S1:

Figure S1. Yeast growth assay. SCMV-VPg, SrMV-VPg, SCSMV-VPg, eIF4Eb, eIF(iso)4E were used as the competitor to test the interaction of SCMV-VPg, SrMV-VPg, SCSMV-VPg with eIF4Eb, eIF(iso)4E, respectively. The competitor were co-transformed with the paired interacting proteins fused with activation domain (AD) or DNA-binding domain (BD) into the yeast *AH109* cells, which were then cultured in the liquid quadruple dropout medium SD/-Leu/-Trp/-His/-Ade at 30 °C for 12 h. Then, the value of OD₆₀₀ was measured to quantify the interaction strength (Student's *t*-test, *P*<0.05). EV: Empty vector.
