

**Figure S2: Bi-modal HCV foci size distribution.** Foci size distributions for Exp. A (**A**) and Exp. B (**B**) shown as violin plots corresponding to Figure 2B and C in the main text, respectively. Distributions are shown for untreated (black) and anti-E2 (grey) treated cultures with the mean (white dot) and standard deviation (white bar) indicated. The violin plots indicate the bi-modal distribution for anti-E2 treated cultures in Exp. B especially at later time points.
