

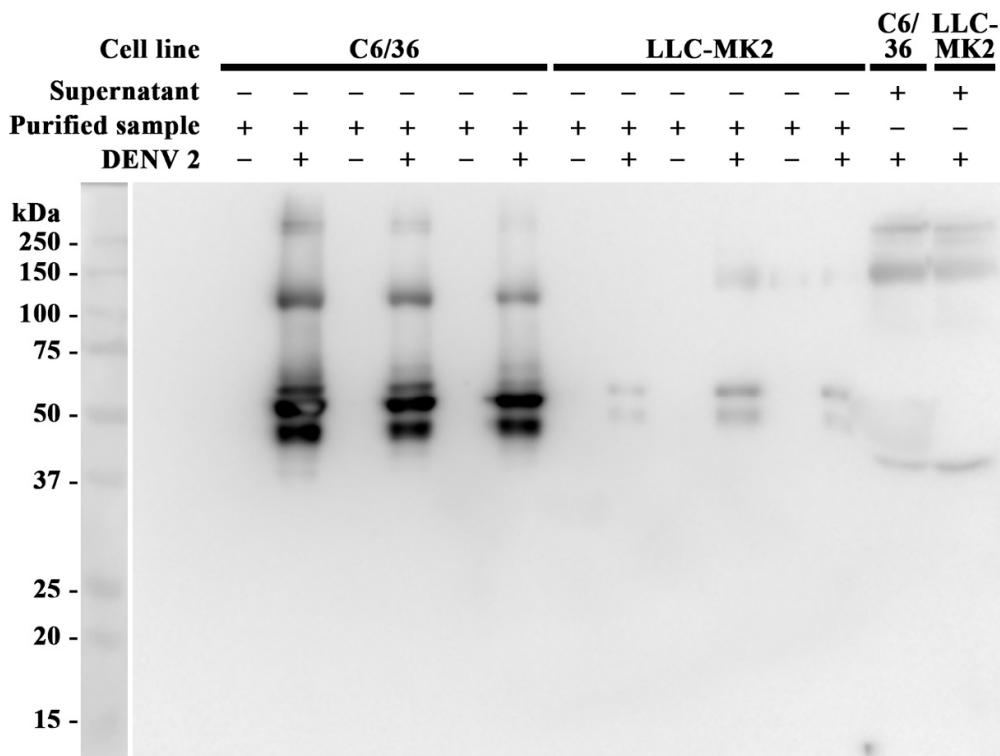

Figure S1, Tables S1 and S2 and uncropped western blots.

**Supplemental Figure S1.**

Western blot analysis of independent triplicates of purified virus and corresponding mock preparations. Samples were electrophoresed through 12% SDS PAGE gels after which proteins were transferred to solid matrix and probed with monoclonal antibody HB112 (mAB 4G2). Multiple bands of similar sizes have been observed by others using this antibody [1]. The whole, uncropped blot is shown together with the protein marker lane.
