**Figure S1: Viral contig quality**

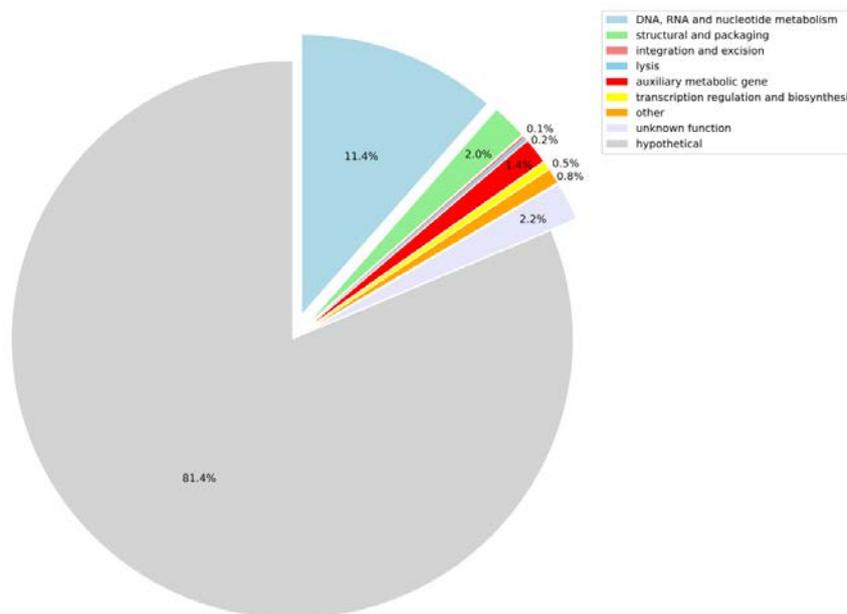

**Figure S1.** Boxplot presenting the number of metagenome recovered putative viral contigs and their CheckV based quality prediction. Complete (blue) and High-quality viral contigs were used for further analysis.

**Figure S2: Viral contig size distribution**

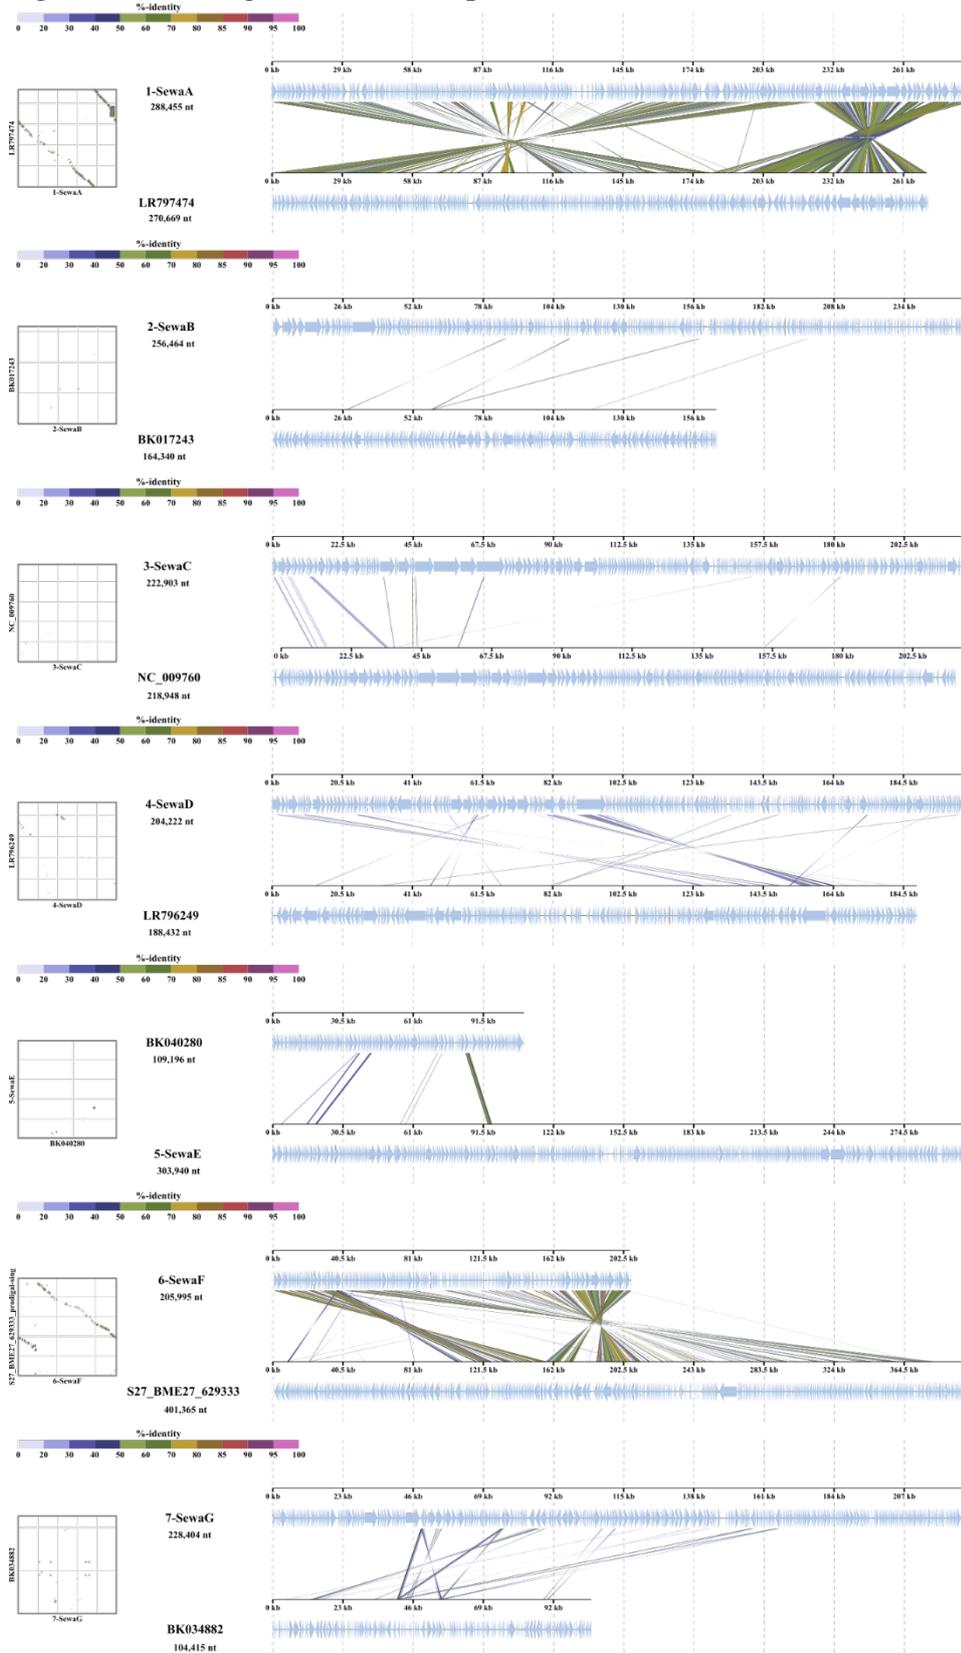

**Figure S2.** Size distribution for putative viral contigs with a minimum length of 200 kbases (huge phages) shown for CheckV 'Complete' and 'High-quality' categories.

**Figure S3: Functional annotation categories**

**Figure S3.** Relative number of functional categories after annotation. A total of 2,861 coding sequences were identified from the seven huge phage genomes.

**Figure S4: TblastX genome-wide comparisons**
