Remdesivir	1.12	0.59, 2.14	0.73			0.16
Corticosteroids	NC	NC	NC			

\*p<0.05; \*\*p<0.01; \*\*\*p<0.001

ACE; angiotensin converting enzyme, aOR, adjusted odds ratio; aOR: adjusted odds ratio; aPTT, activated partial thromboplastin time; ARA-II: angiotensin II antagonist receptors; CI, confidence interval; COPD: chronic obstructive pulmonary disease, ICU, intensive care unit; LDH, lactate dehydrogenase; OR, odds ratio PCR: polymerase chain reaction; SEIMC: Spanish Society of Infectious Diseases and Clinical Microbiology; NC: not calculable (all but 1 patient received corticosteroids)

† SEIMC score is a prediction score based on age, age-adjusted low saturation of oxygen, neutrophil-to-lymphocyte ratio, estimated glomerular filtration rate, dyspnoea and sex. It has proven to be a useful tool to predict 30-day mortality probability among hospitalised patients with COVID-19

Hosmer-Lemeshow test, p=0.96, Chi<sup>2</sup> p= 0.002, Percentage correct classification 71.3%, R<sup>2</sup>: 0.130
