1 Basic reproductive number

The basic reproductive number, R_0 , was calculated based off the work of Diekmann et. al. using Next Generation Matrices (NGM) [1].

Transmission Matrix (T)

$$\begin{pmatrix} 0 & 0 & \beta T_0 \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{pmatrix}$$

Transition Matrix (Σ)

$$\begin{pmatrix} -k & 0 & 0 \\ 0 & -\delta & 0 \\ 0 & \frac{p}{1+\epsilon F} & -c \end{pmatrix}$$

$-T\Sigma^{-1} =$

$$\begin{pmatrix} 0 & \frac{\beta T p}{\delta c(1+\epsilon F)} & \frac{\beta T}{c} \\ 0 & 0 & 0 \\ 0 & 0 & 0 \end{pmatrix}$$

Dominant eigenvalue of $-T\Sigma^{-1}$: $\frac{\beta T p}{\delta c(1+\epsilon F)}$

2 Corner Plots

The following plots show correlation relationships between the parameters, as well as parameter histograms. Plots were made using the `corner.py` package of Python [2].
