

# Supplementary Materials: Supersaturated lipid-based formulations to enhance oral the bioavailability of venetoclax

Niklas J. Koehl, Laura J. Henze, Martin Kuentz, René Holm and Brendan T. Griffin

Supporting information	Page
Figure S1. DSC of venetoclax batches.	1
Figure S2. Hot-stage microscopy of venetoclax batch 1 during heating and cooling.	2

**Figure S1.** DSC of venetoclax batches. Given are the melting temperatures and enthalpy of fusion (mean  $\pm$  SD,  $n = 3$ ).

**Figure S2.** Hot-stage microscopy of venetoclax batch 1 under cross-polarised light. Pictures were taken at various temperatures during heating from room temperature to 165 °C (10 °C/min) and during cooling to 25 °C (20 °C/min).
