

Supplemental data

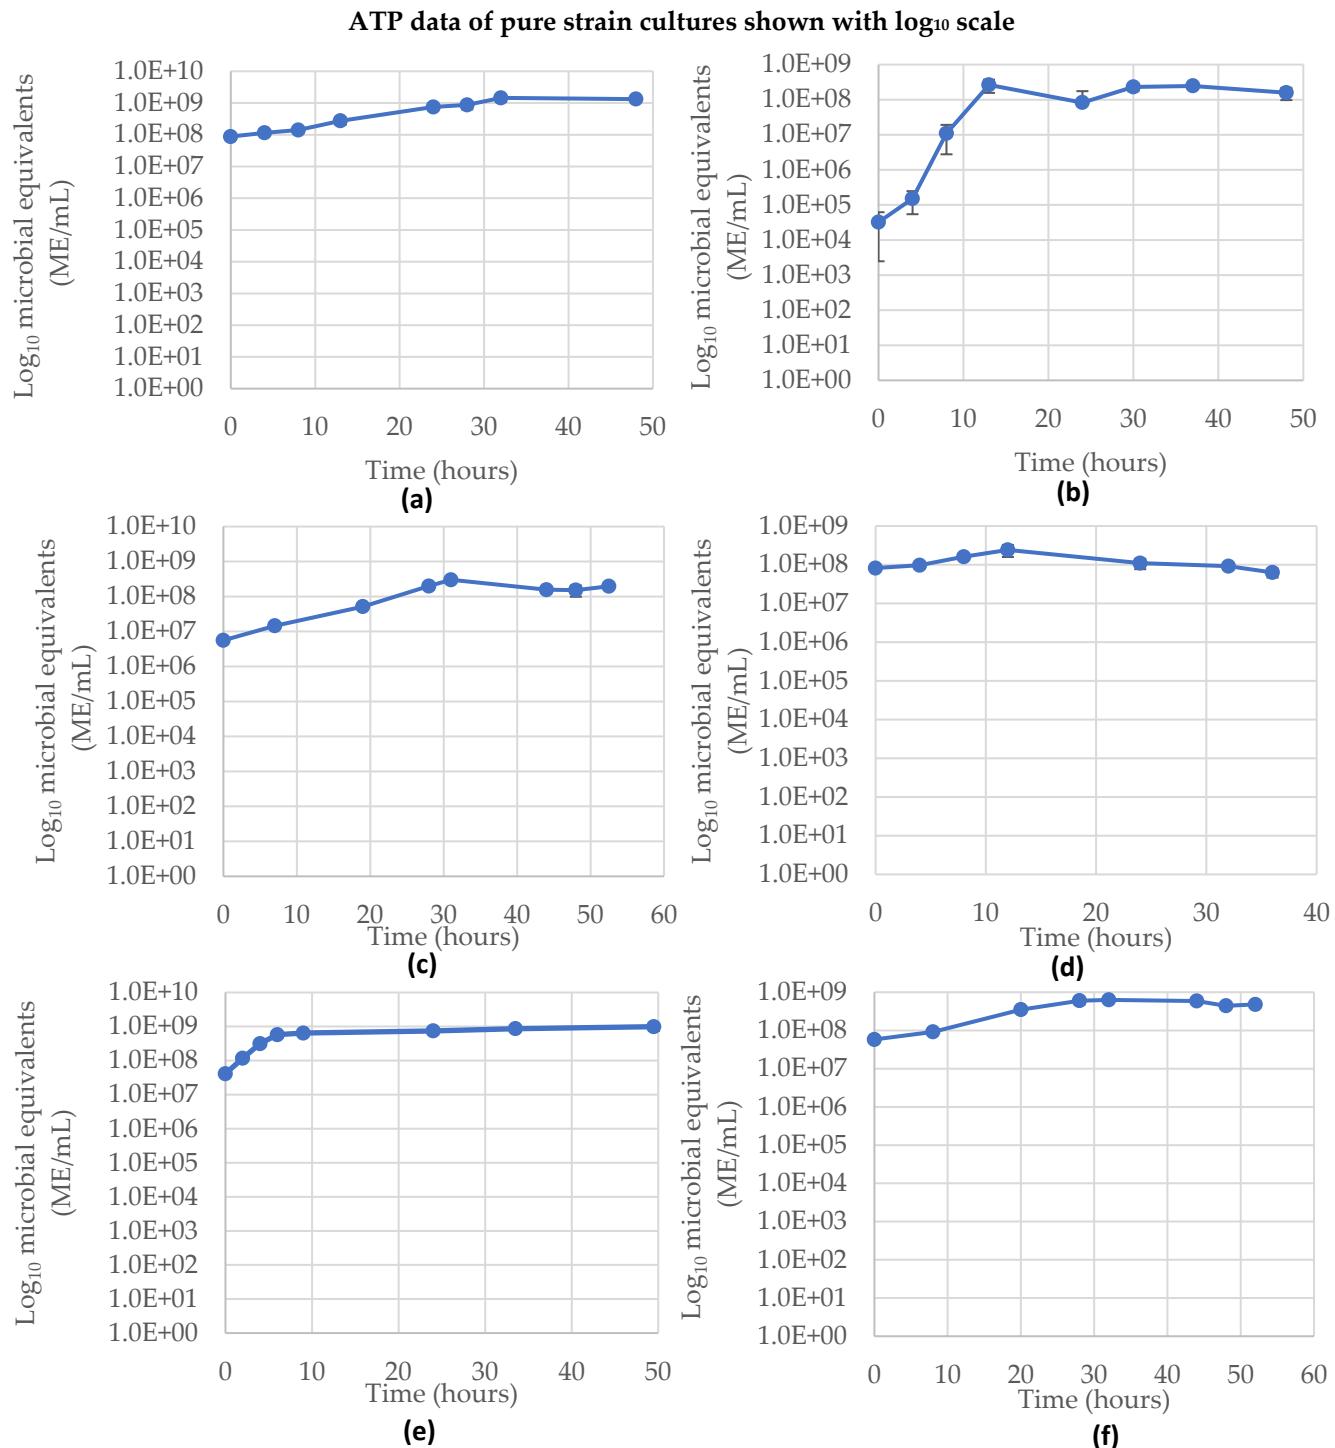

Figure S1: Microbial equivalents per milliliter time course as determined using luciferase-based ATP assay for each species plotted on a log₁₀ scale for: (a) *A. woodii*; (b) *B. subtilis*; (c) *D. vulgaris*; (d) *G. subterraneus*; (e) *P. putida*; (f) *T. aromatic*. Blue lines are the species growth curves (n=3).

16S rRNA targeted qPCR data of pure strain cultures shown with log10 scale

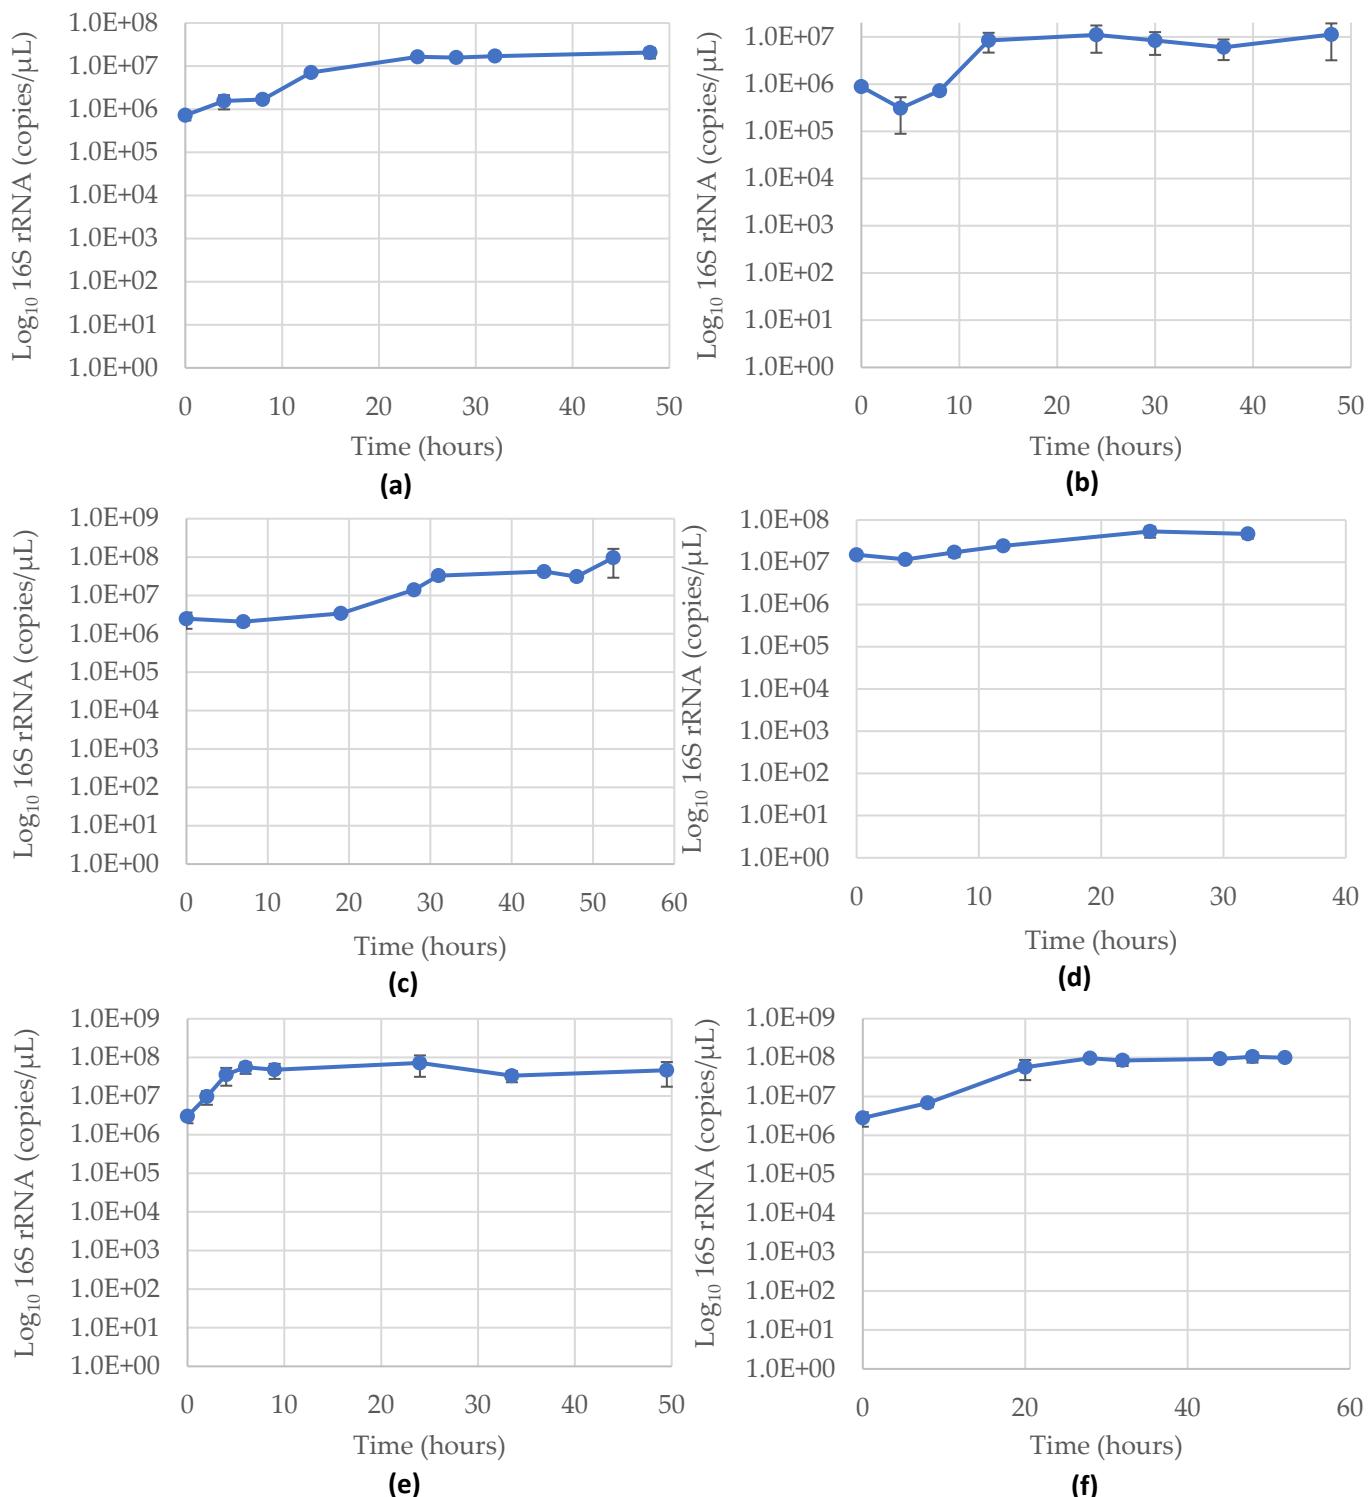

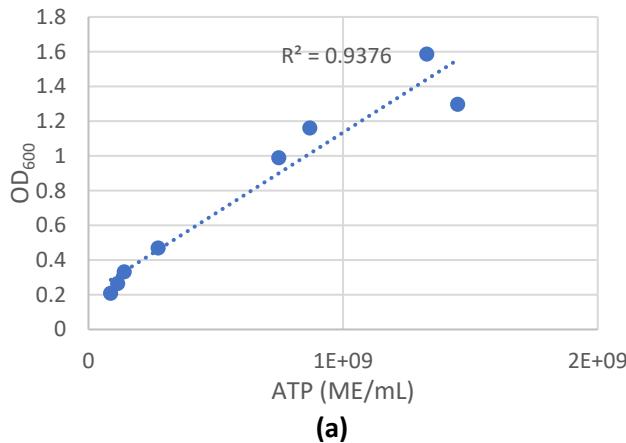

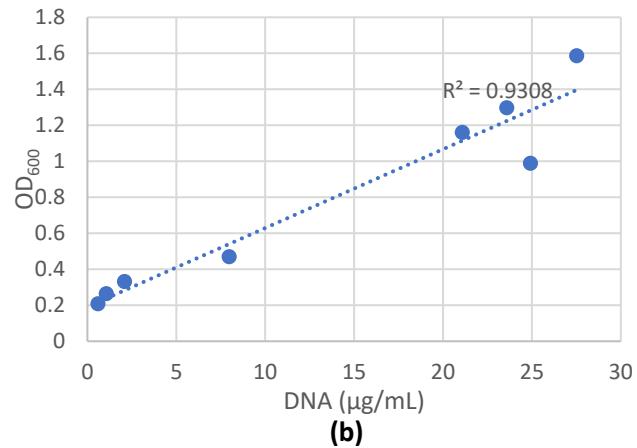

Figure S2: 16S rRNA copies per microliter as detected by qPCR on a log10 scale over a time course of: **(a)** *A. woodii*; **(b)** *B. subtilis*; **(c)** *D. vulgaris*; **(d)** *G. subterraneus*; **(e)** *P. putida*; **(f)** *T. aromatica*. Blue lines are the species growth curves ($n=6$, three biological each with two technical replicates).

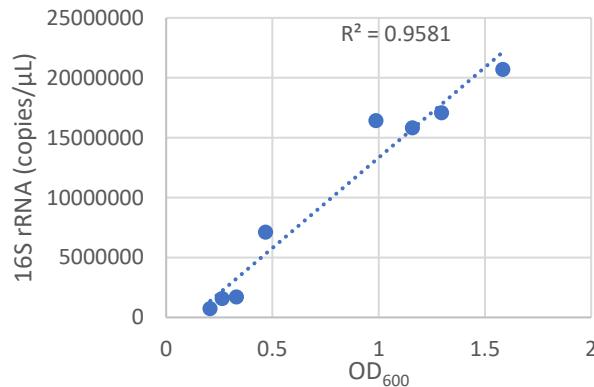

XY scatter plots used to calculate correlation values between monitoring methods.

(b)

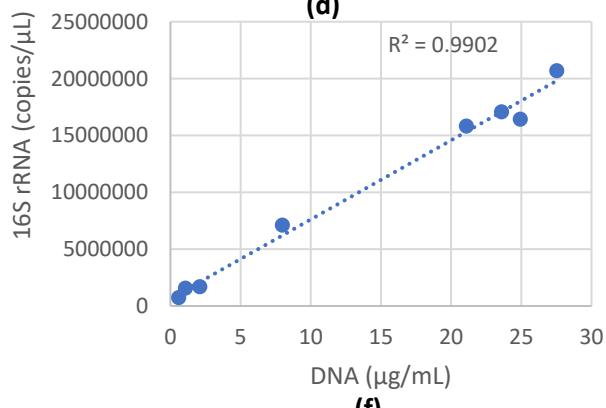

(c)

(d)

(e)

(f)

Figure S3: XY scatter plots of all four monitoring methods from *A. woodii* used to determine the correlation values (R values) between a) OD_{600} and ATP; b) OD_{600} and DNA; c) OD_{600} and 16S rRNA; d) ATP and DNA; e) ATP and 16S rRNA; f) DNA and 16S rRNA. R values were calculated by taking the square root of the R^2 value from the linear trendlines.

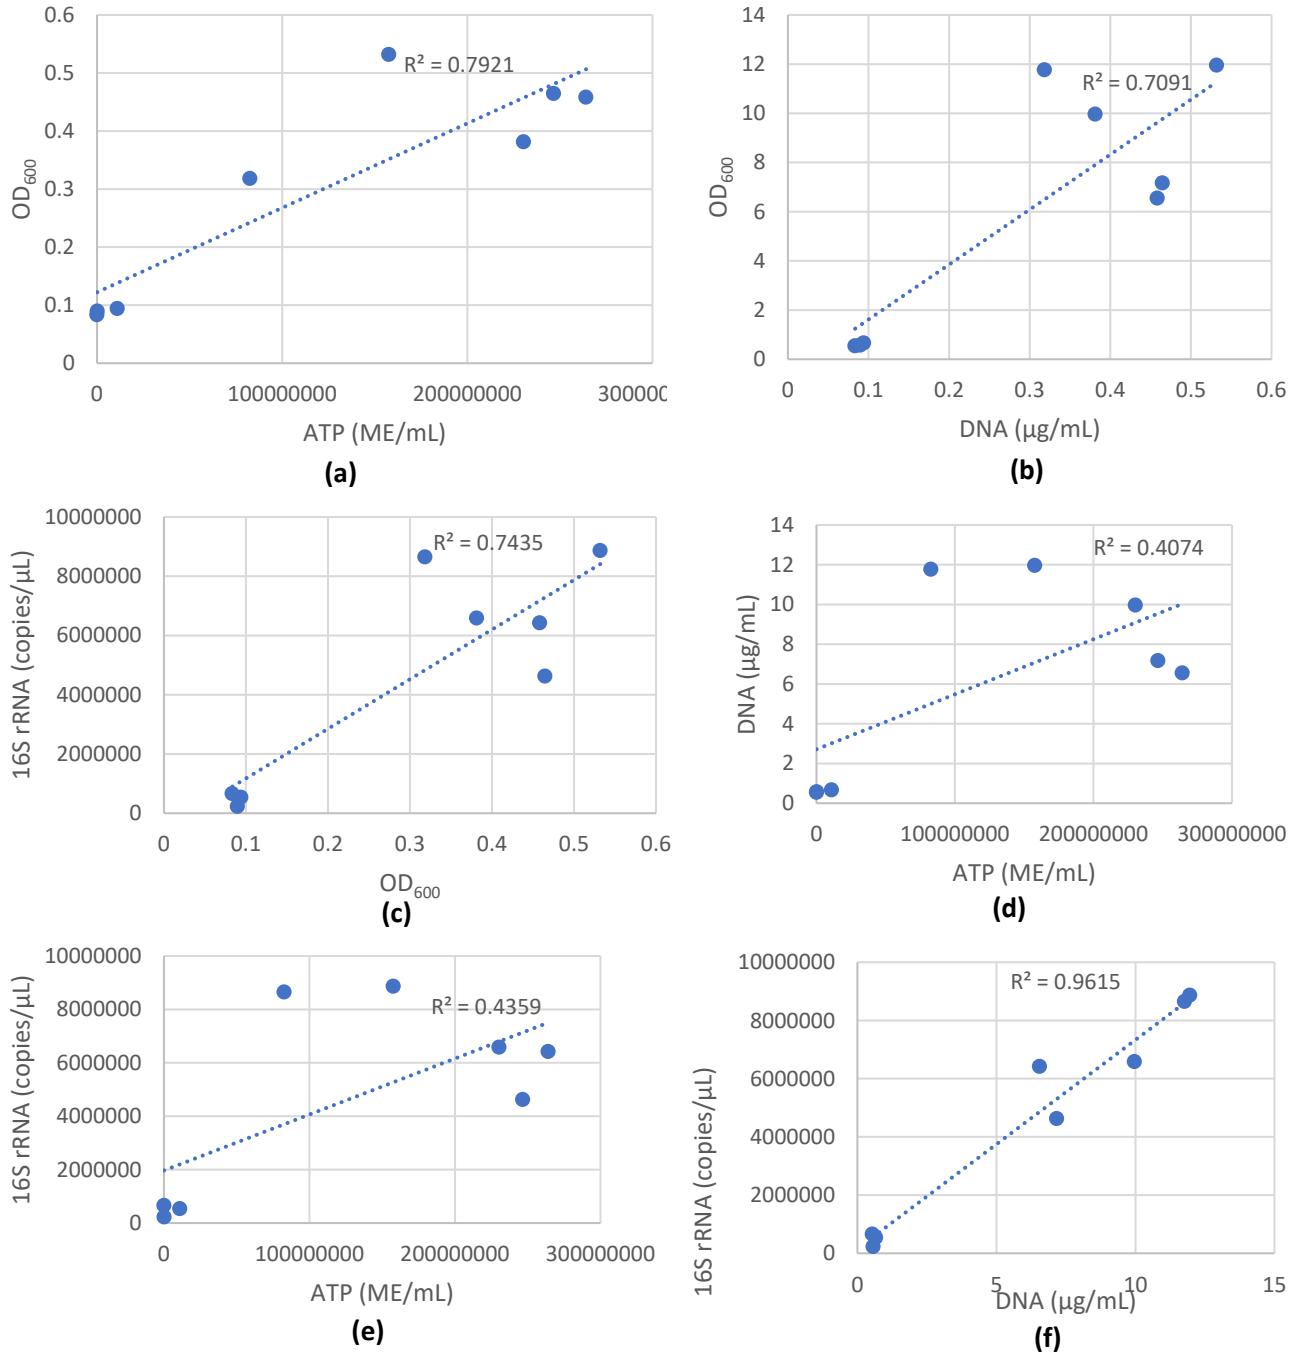

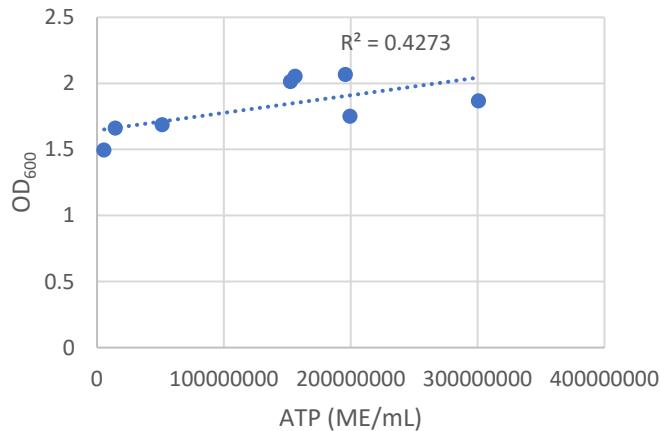

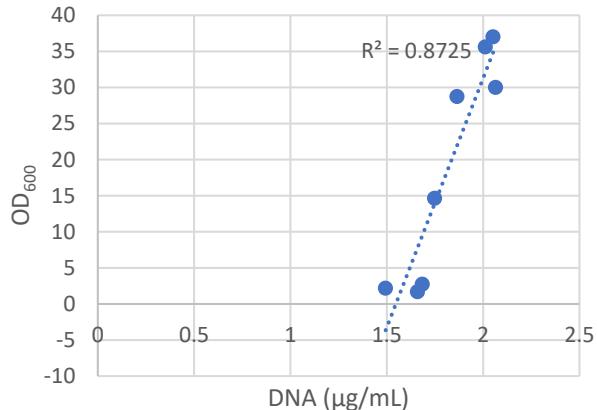

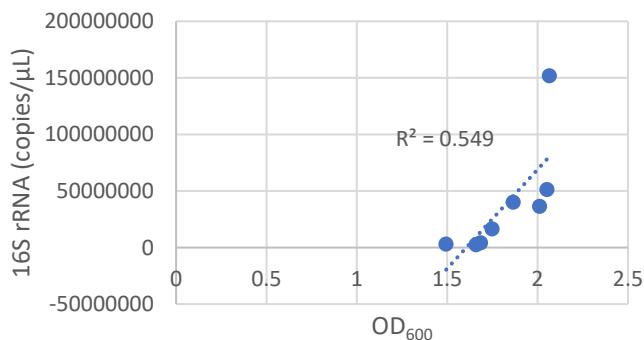

Figure S4: XY scatter plots of all four monitoring methods from *B. subtilis* used to determine the correlation values (R values) between **a**) OD_{600} and ATP; **b**) OD_{600} and DNA; **c**) OD_{600} and 16S rRNA; **d**) ATP and DNA; **e**) ATP and 16S rRNA; **f**) DNA and 16S rRNA. R values were calculated by taking the square root of the R^2 value from the linear trendlines.

(f)

Figure S5: XY scatter plots of all four monitoring methods from *D. vulgaris* used to determine the correlation values (R values) between a) OD₆₀₀ and ATP; b) OD₆₀₀ and DNA; c) OD₆₀₀ and 16S rRNA; d) ATP and DNA; e) ATP and 16S rRNA; f) DNA and 16S rRNA. Modified DNA and 16S rRNA correlation to exclude the final 16S (and corresponding DNA) time point is shown in orange. R values were calculated by taking the square root of the R^2 value from the linear trendlines.

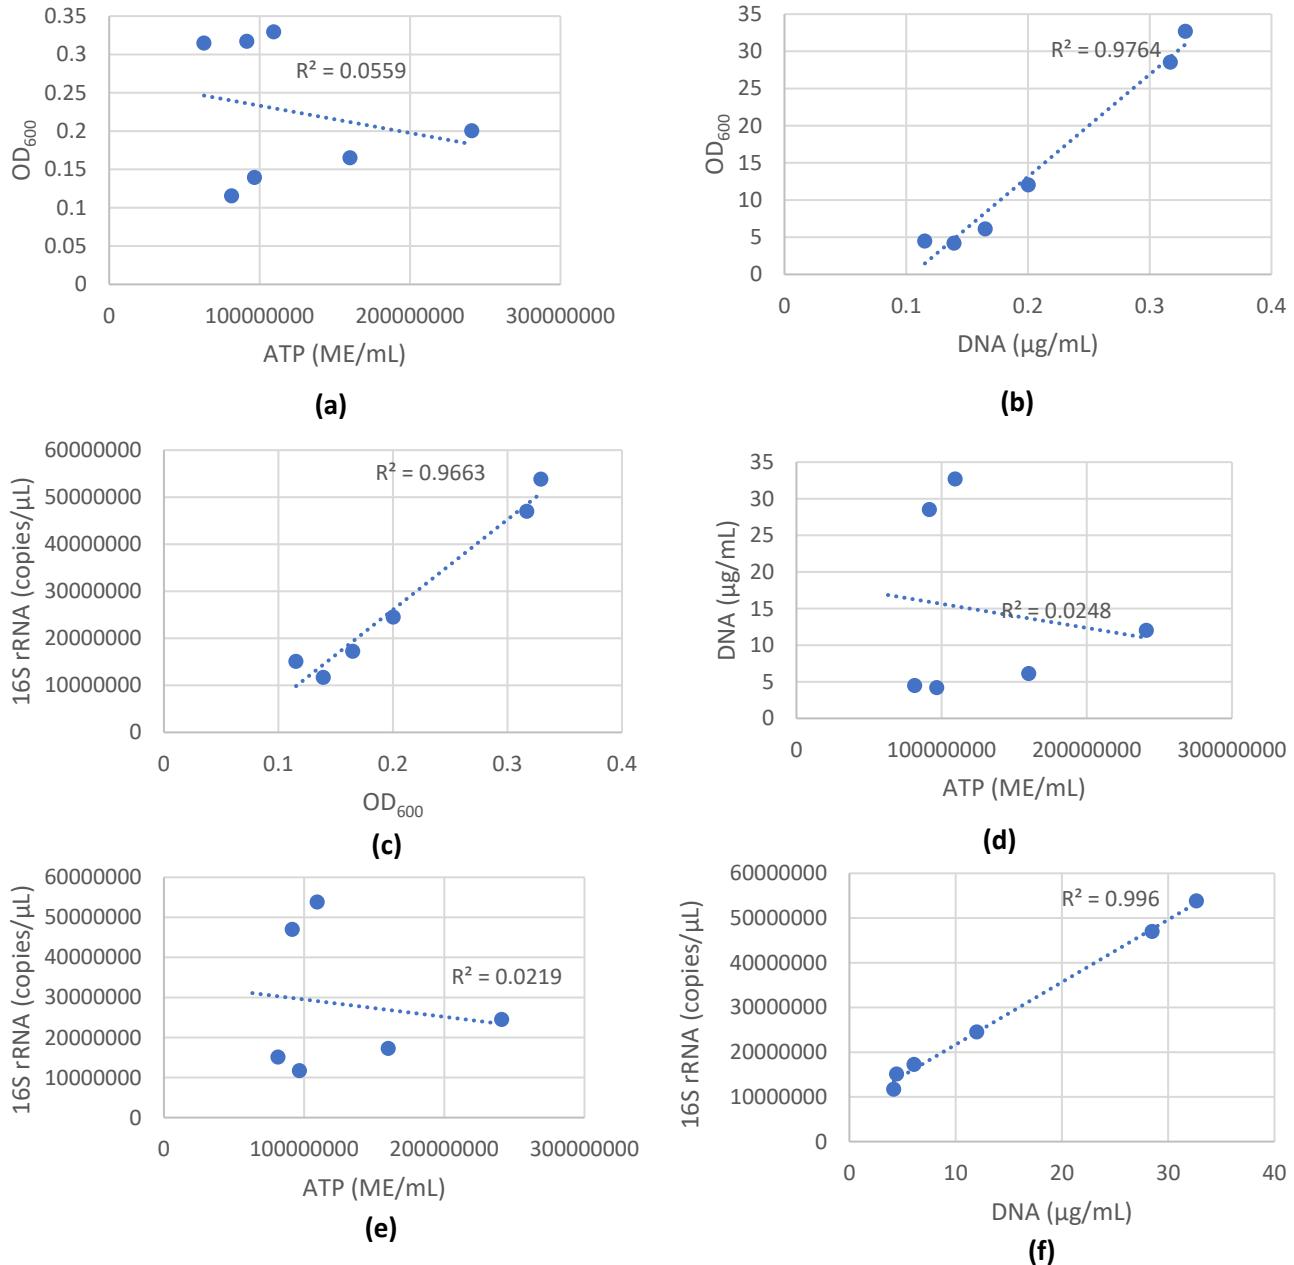

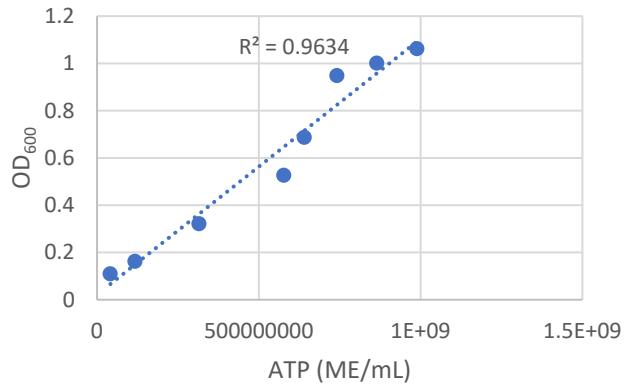

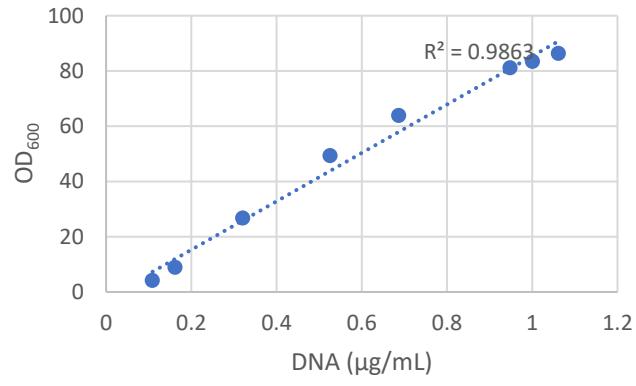

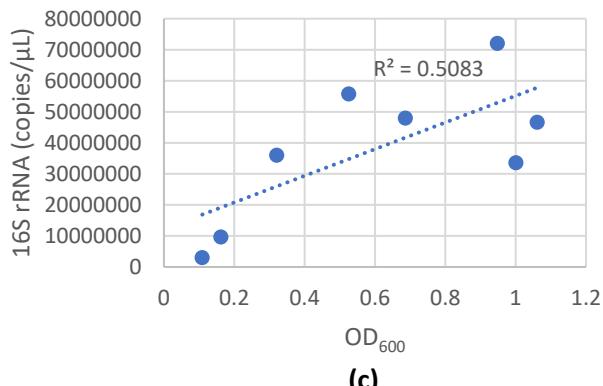

Figure S6: XY scatter plots of all four monitoring methods from *G. subterraneus* used to determine the correlation values (R values) between **a**) OD_{600} and ATP; **b**) OD_{600} and DNA; **c**) OD_{600} and $16S \text{ rRNA}$; **d**) ATP and DNA; **e**) ATP and $16S \text{ rRNA}$; **f**) DNA and $16S \text{ rRNA}$. R values were calculated by taking the square root of the R^2 value from the linear trendlines.

Figure S8: XY scatter plots of all four monitoring methods from *T. aromatica* used to determine the correlation values (R values) between a) OD₆₀₀ and ATP; b) OD₆₀₀ and DNA; c) OD₆₀₀ and 16S rRNA; d) ATP and DNA; e) ATP and 16S rRNA; f) DNA and 16S rRNA. R values were calculated by taking the square root of the R² value from the linear trendlines.

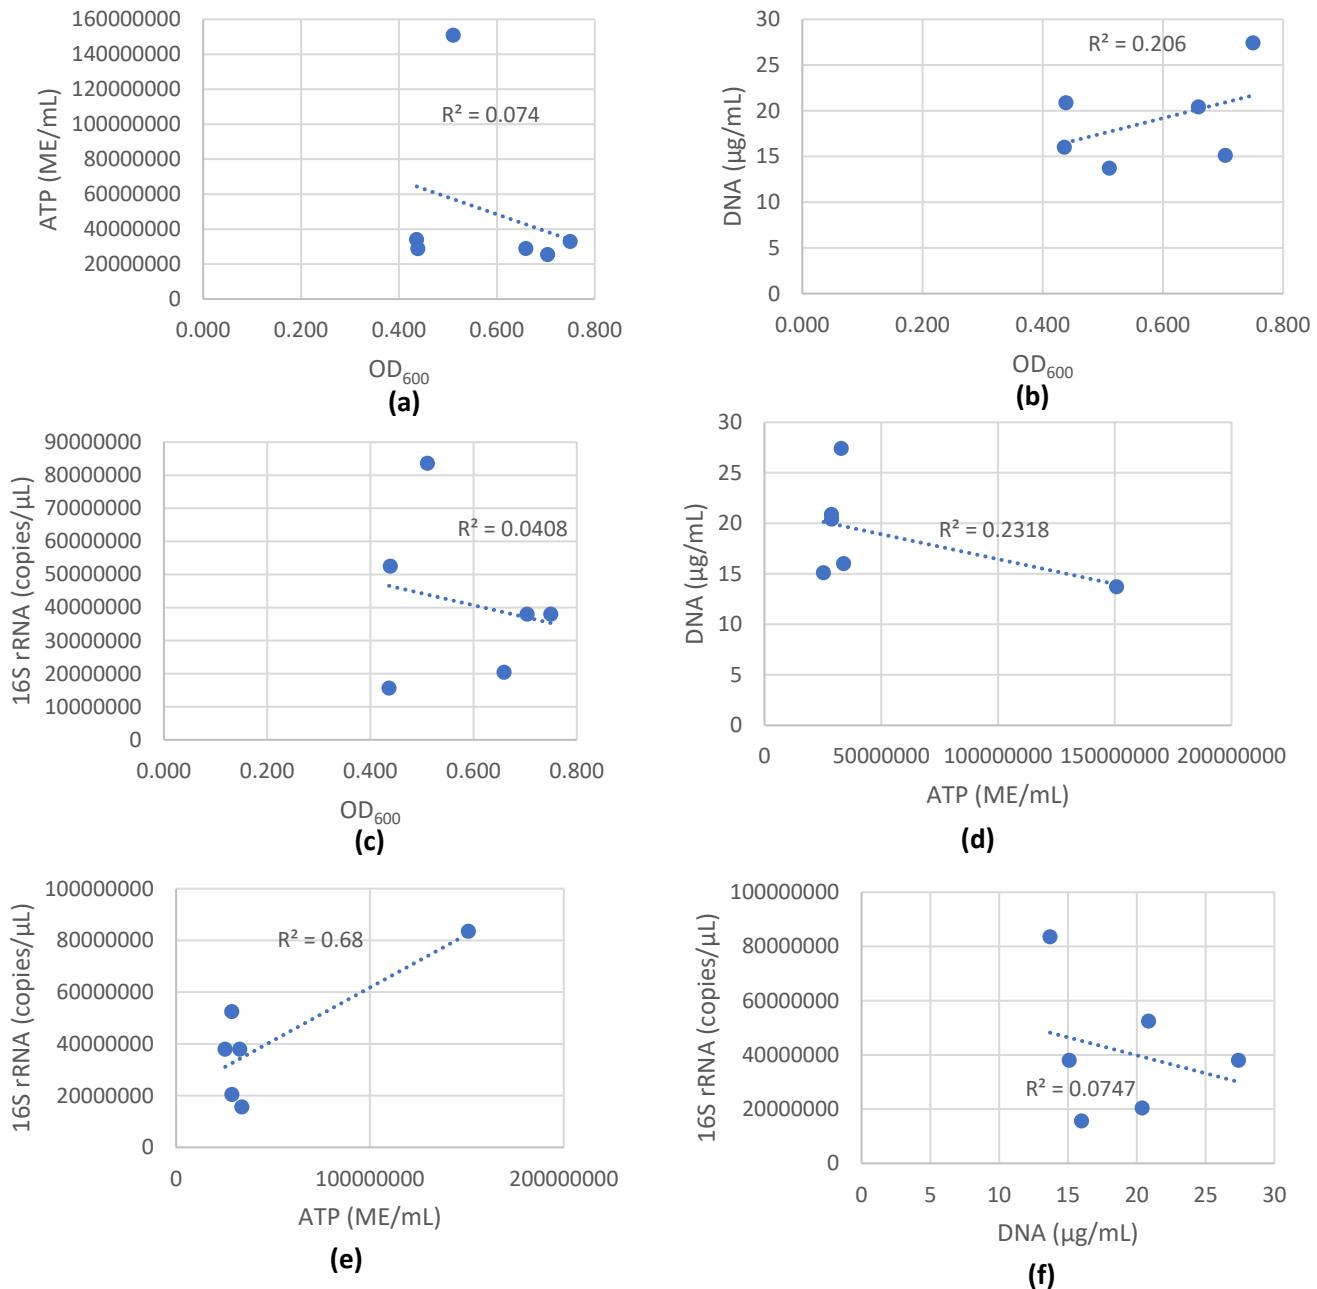

Figure S9: XY scatter plots of all four monitoring methods from the planktonic cells from the CBR exposed to THPS used to determine the correlation values (R values) between **a**) OD₆₀₀ and ATP; **b**) OD₆₀₀ and DNA; **c**) OD₆₀₀ and 16S rRNA; **d**) ATP and DNA; **e**) ATP and 16S rRNA; **f**) DNA and 16S rRNA. R values were calculated by taking the square root of the R² value from the linear trendlines.

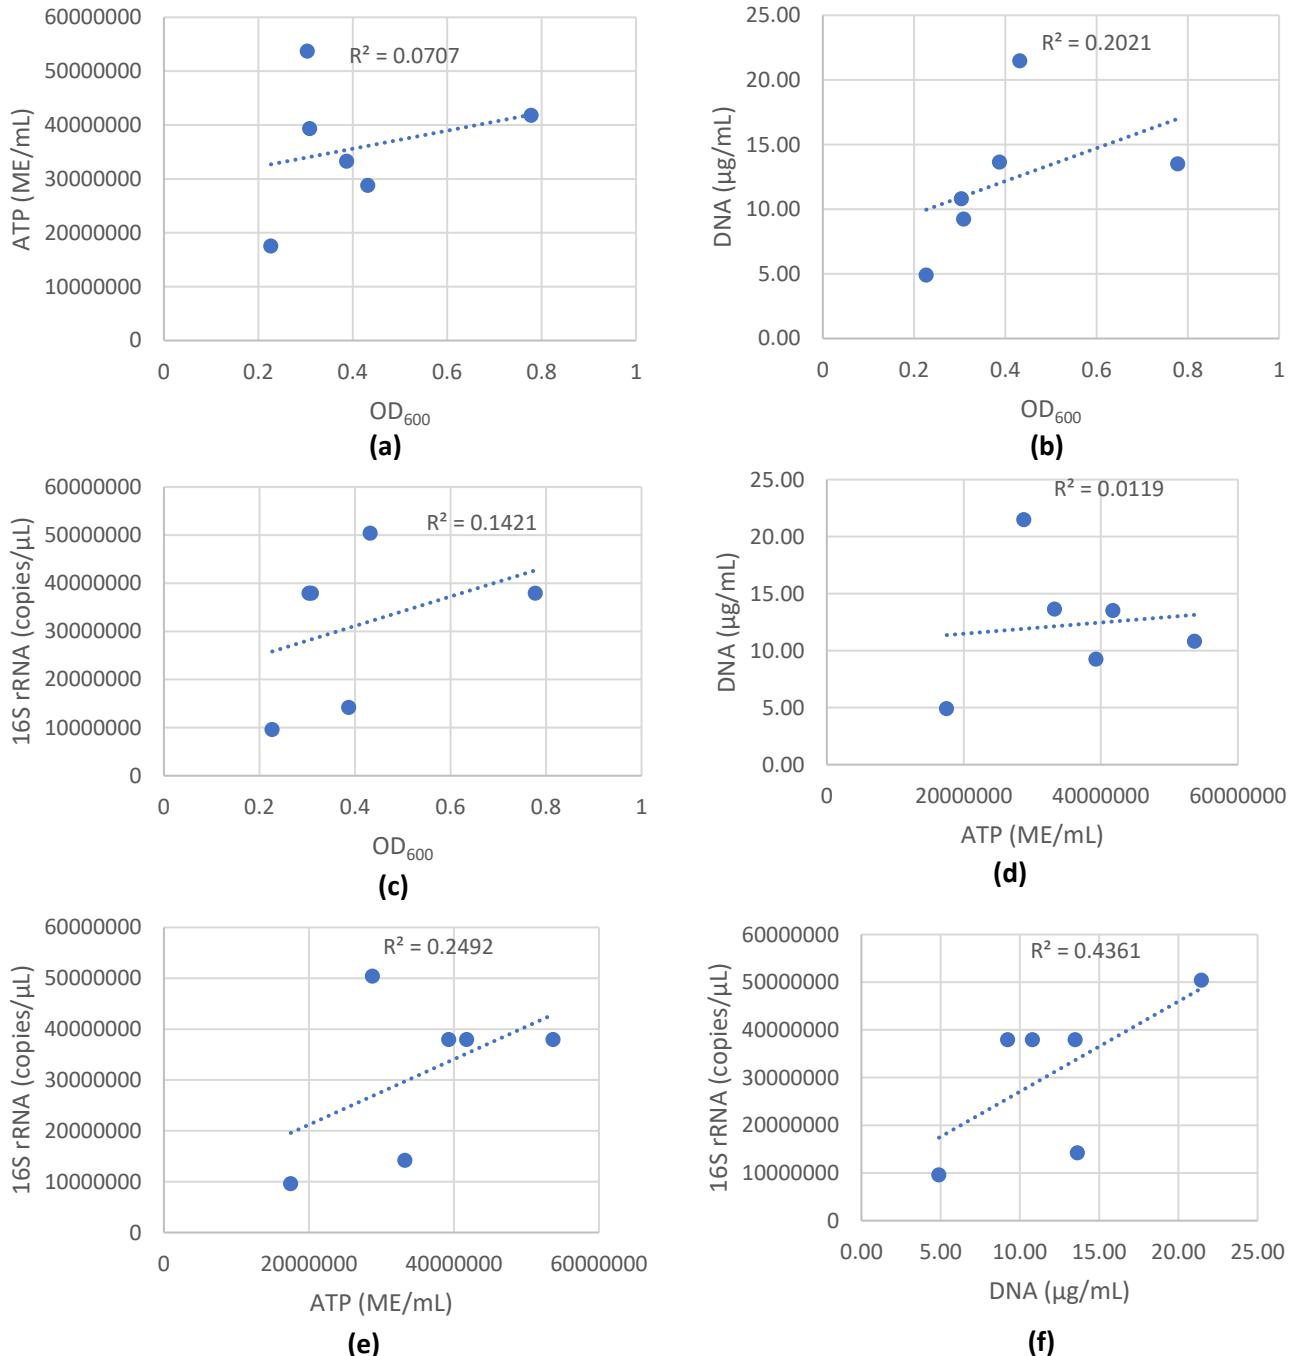

Figure S10: XY scatter plots of all four monitoring methods from the planktonic cells from the CBR not exposed to THPS used to determine the correlation values (R values) between **a**) OD_{600} and ATP; **b**) OD_{600} and DNA; **c**) OD_{600} and 16S rRNA; **d**) ATP and DNA; **e**) ATP and 16S rRNA; **f**) DNA and 16S rRNA. R values were calculated by taking the square root of the R^2 value from the linear trendlines.

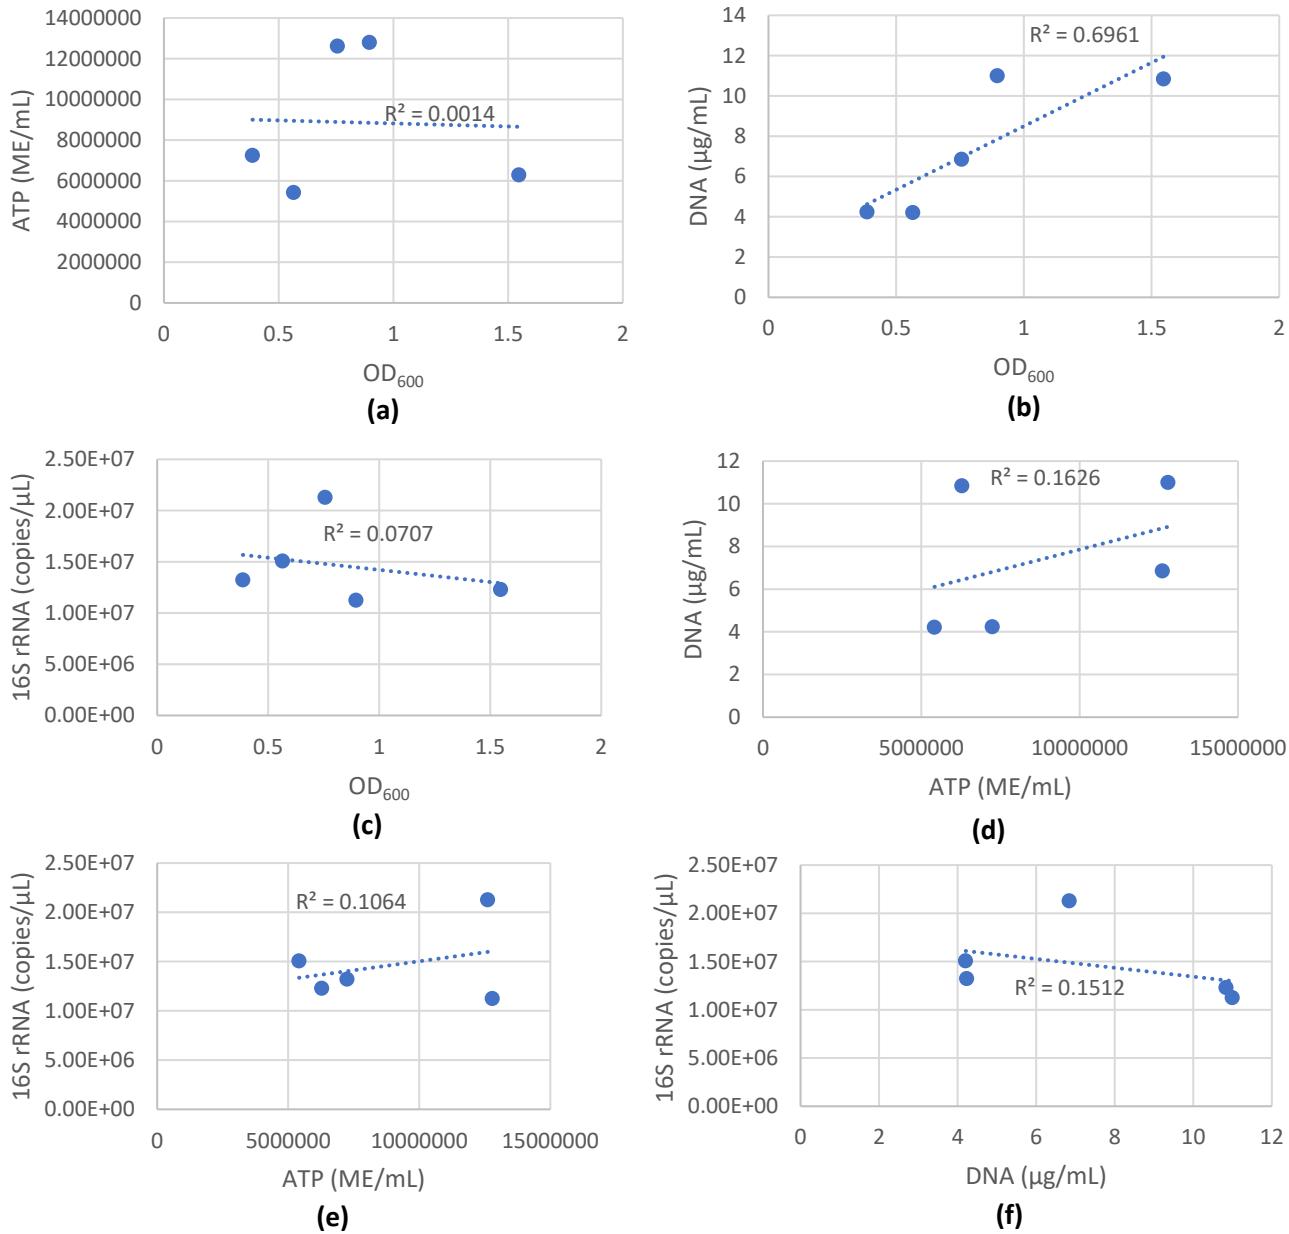

Figure S11: XY scatter plots of all four monitoring methods from the sessile cells from the CBR exposed to THPS used to determine the correlation values (R values) between **a**) OD_{600} and ATP; **b**) OD_{600} and DNA; **c**) OD_{600} and 16S rRNA; **d**) ATP and DNA; **e**) ATP and 16S rRNA; **f**) DNA and 16S rRNA. R values were calculated by taking the square root of the R^2 value from the linear trendlines.

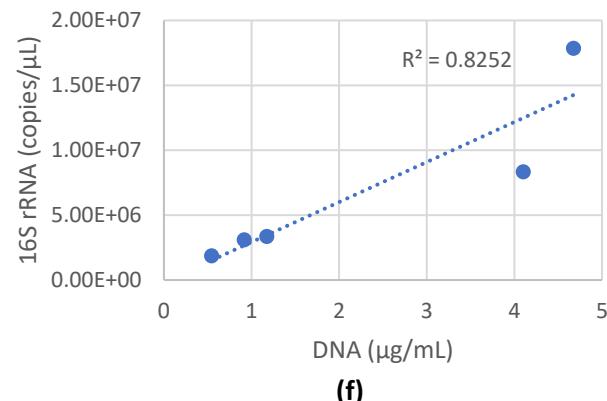

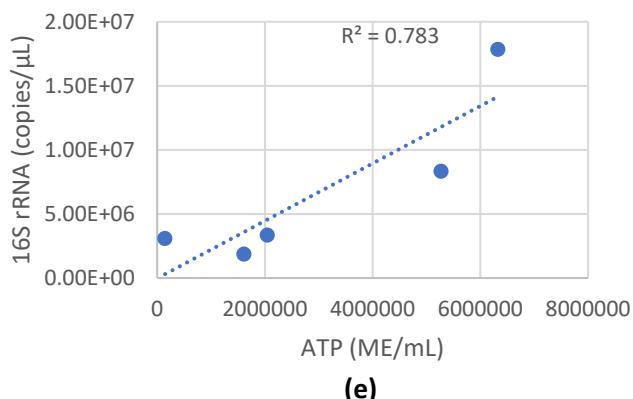

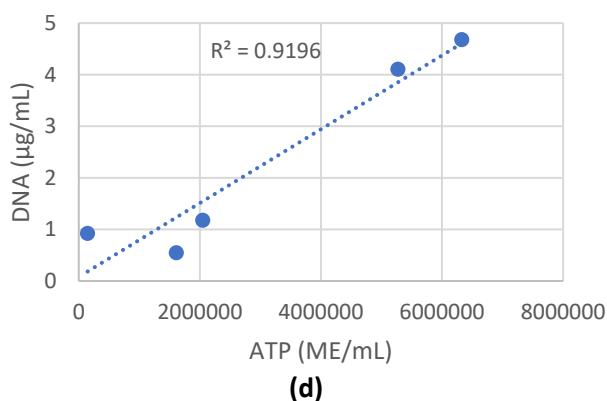

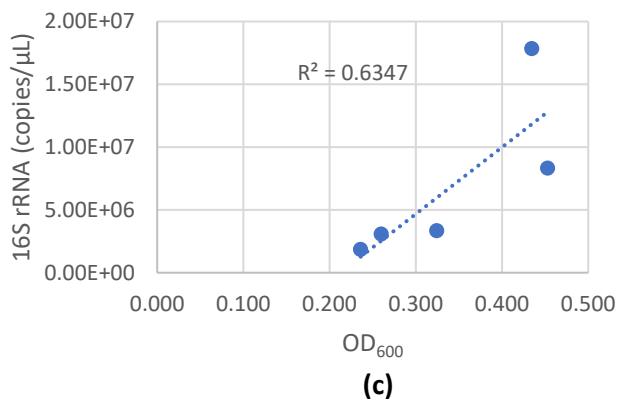

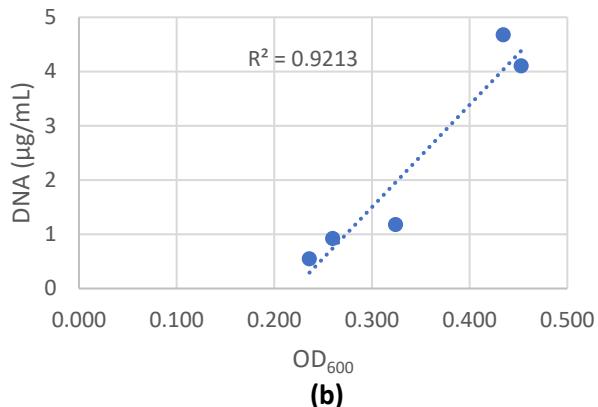

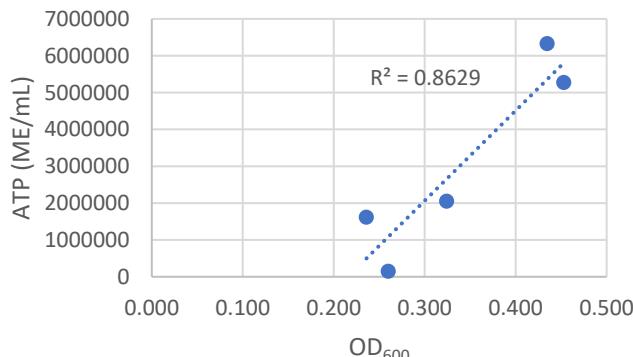

Figure S12: XY scatter plots of all four monitoring methods from the sessile cells from the CBR not exposed to THPS used to determine the correlation values (R values) between **a**) OD₆₀₀ and ATP; **b**) OD₆₀₀ and DNA; **c**) OD₆₀₀ and 16S rRNA; **d**) ATP and DNA; **e**) ATP and 16S rRNA; **f**) DNA and 16S rRNA. R values were calculated by taking the square root of the R² value from the linear trendlines.

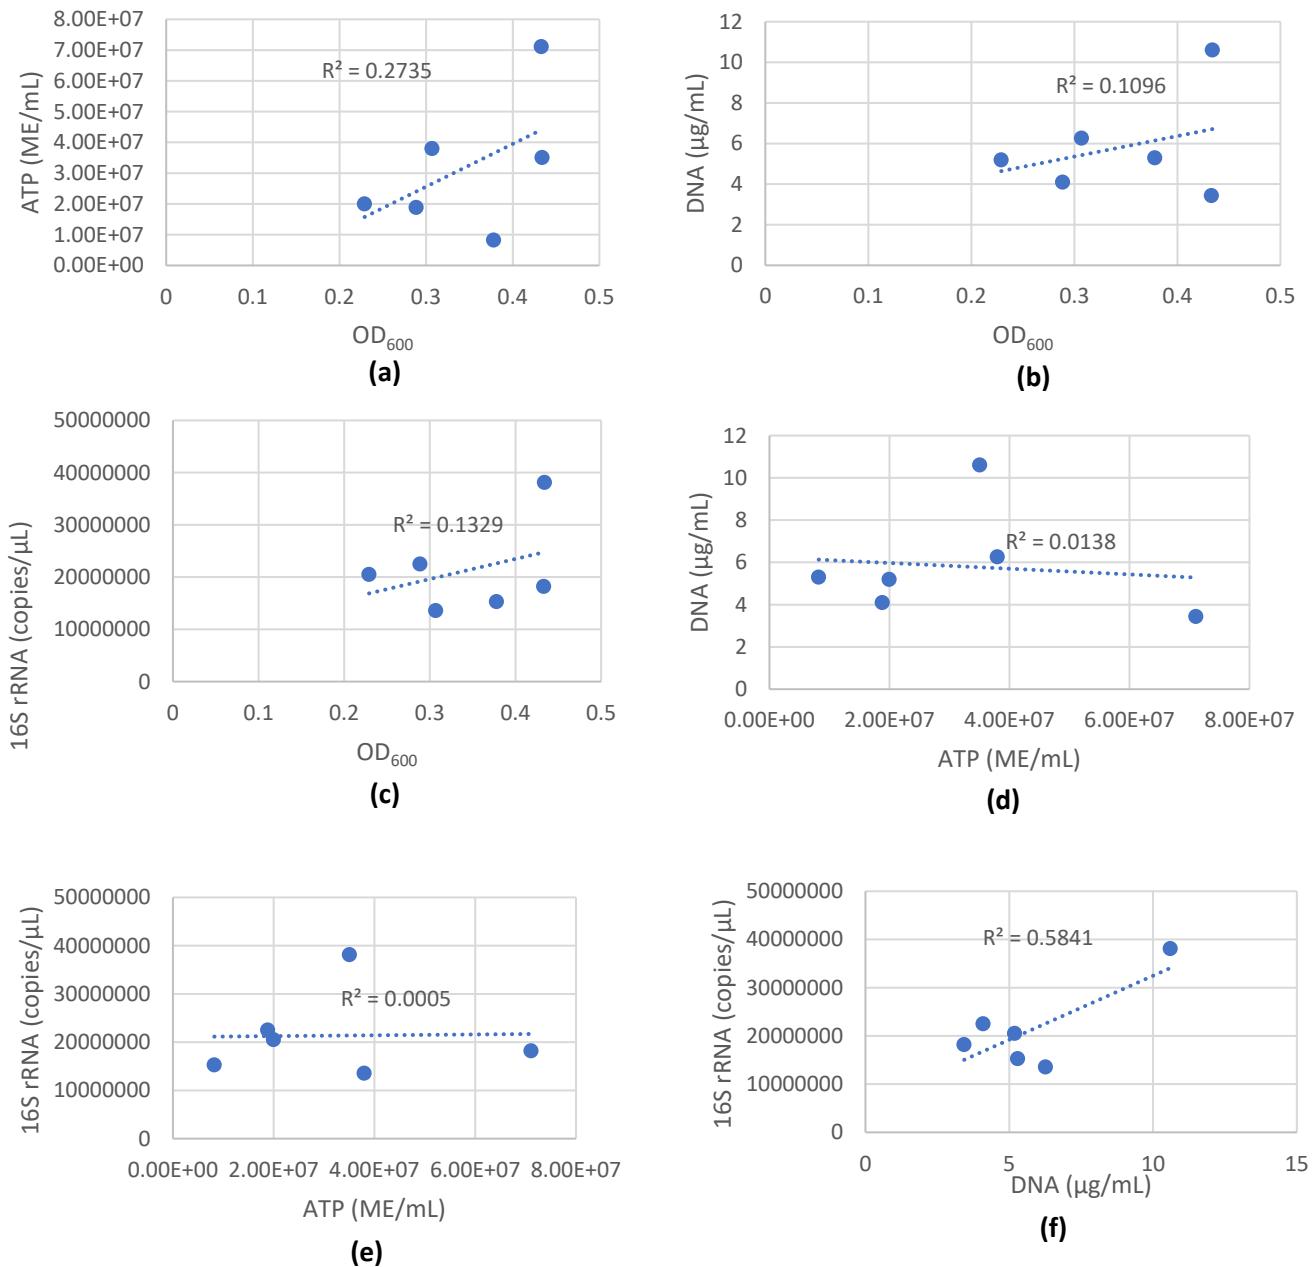

Figure S13: XY scatter plots of all four monitoring methods from the planktonic cells from the CBR exposed to BAC used to determine the correlation values (R values) between **a)** OD_{600} and ATP; **b)** OD_{600} and DNA; **c)** OD_{600} and 16S rRNA; **d)** ATP and DNA; **e)** ATP and 16S rRNA; **f)** DNA and 16S rRNA. R values were calculated by taking the square root of the R^2 value from the linear trendlines.

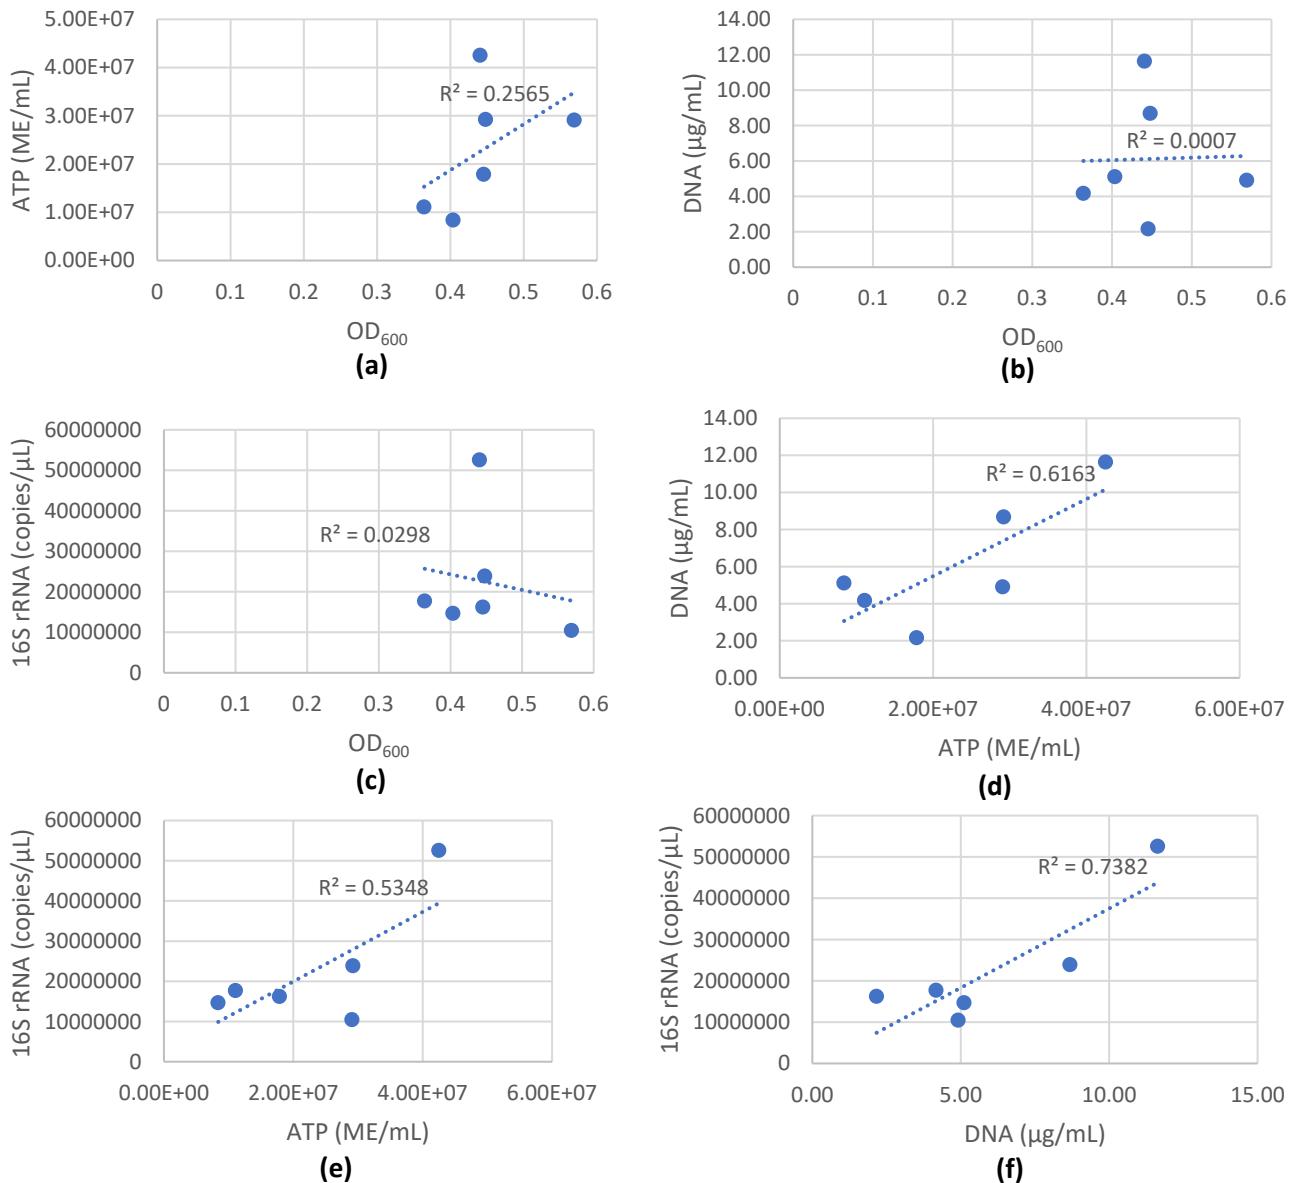

Figure S14: XY scatter plots of all four monitoring methods from the planktonic cells from the CBR not exposed to BAC used to determine the correlation values (R values) between **a**) OD₆₀₀ and ATP; **b**) OD₆₀₀ and DNA; **c**) OD₆₀₀ and 16S rRNA; **d**) ATP and DNA; **e**) ATP and 16S rRNA; **f**) DNA and 16S rRNA. R values were calculated by taking the square root of the R^2 value from the linear trendlines.

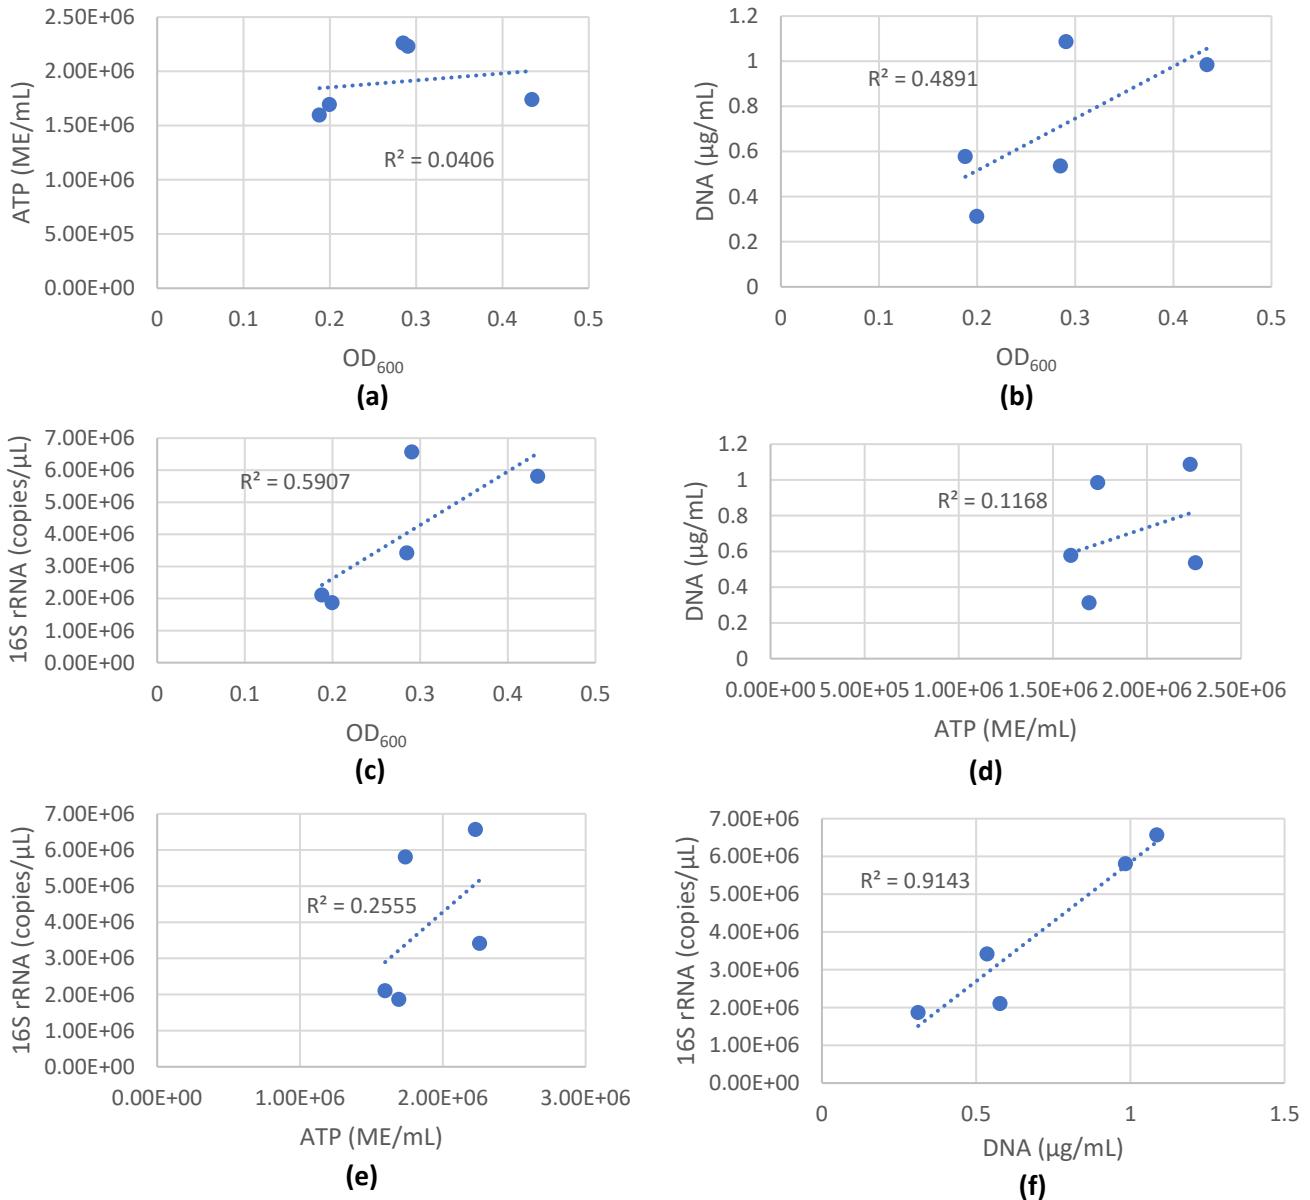

Figure S15: XY scatter plots of all four monitoring methods from the sessile cells from the CBR exposed to BAC used to determine the correlation values (R values) between **a**) OD_{600} and ATP; **b**) OD_{600} and DNA; **c**) OD_{600} and 16S rRNA; **d**) ATP and DNA; **e**) ATP and 16S rRNA; **f**) DNA and 16S rRNA. R values were calculated by taking the square root of the R^2 value from the linear trendlines.

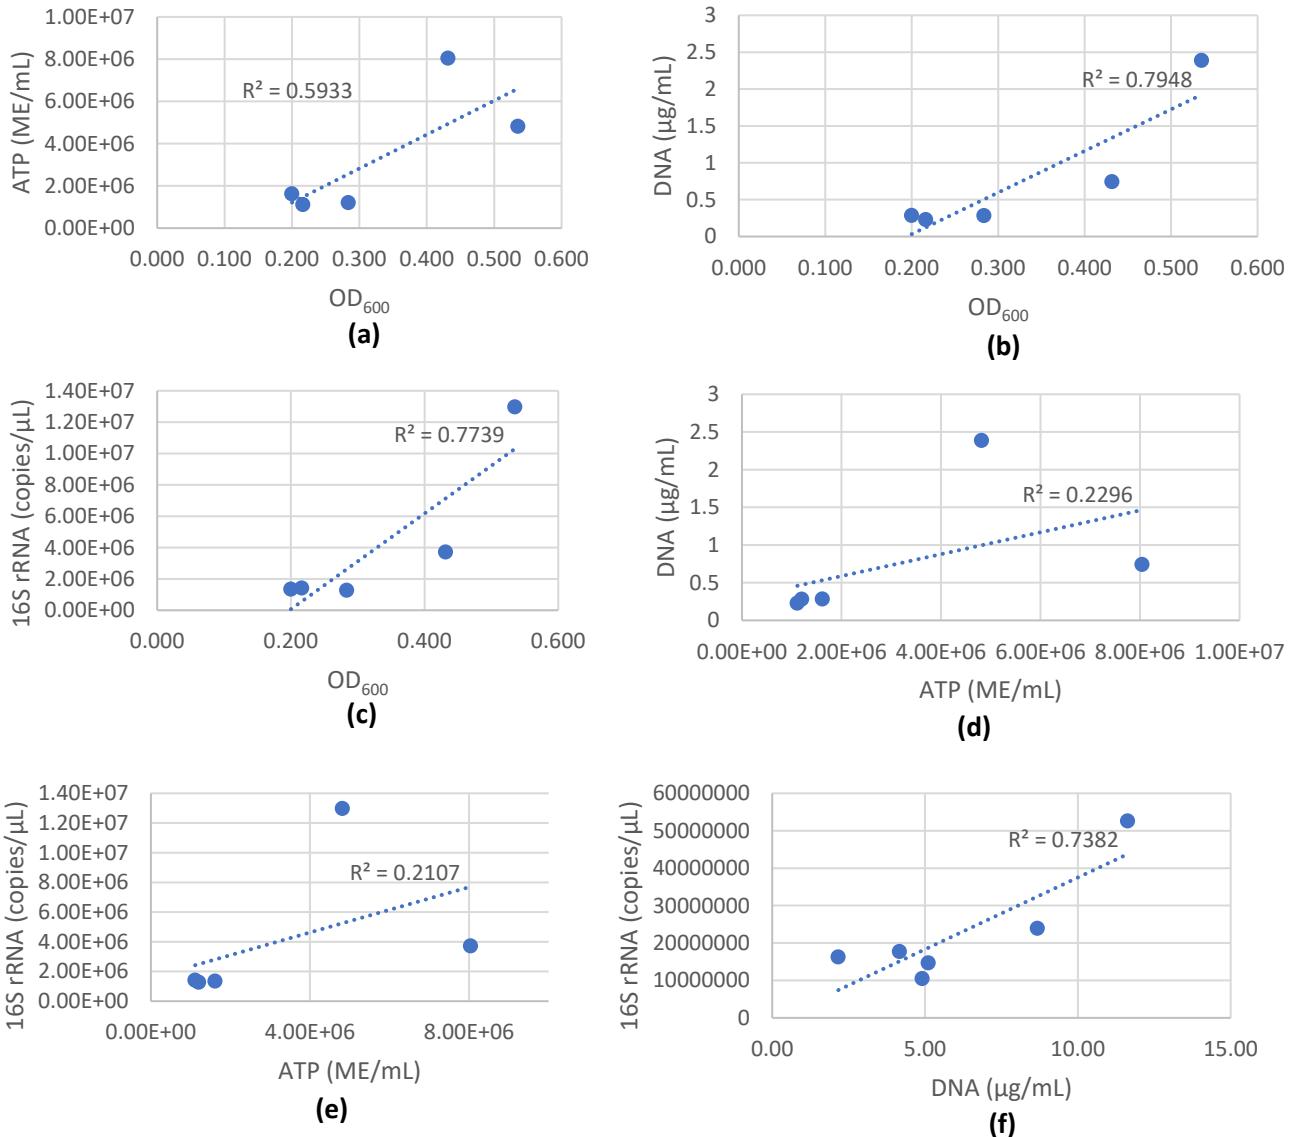

Figure S16: XY scatter plots of all four monitoring methods from the sessile cells from the CBR not exposed to BAC used to determine the correlation values (R values) between a) OD₆₀₀ and ATP; b) OD₆₀₀ and DNA; c) OD₆₀₀ and 16S rRNA; d) ATP and DNA; e) ATP and 16S rRNA; f) DNA and 16S rRNA. R values were calculated by taking the square root of the R² value from the linear trendlines.

Preliminary data used for proper time point sampling of each pure strain culture

Table S1 Tabulated data of OD₆₀₀, ATP and DNA methods used to determine proper sampling time points
