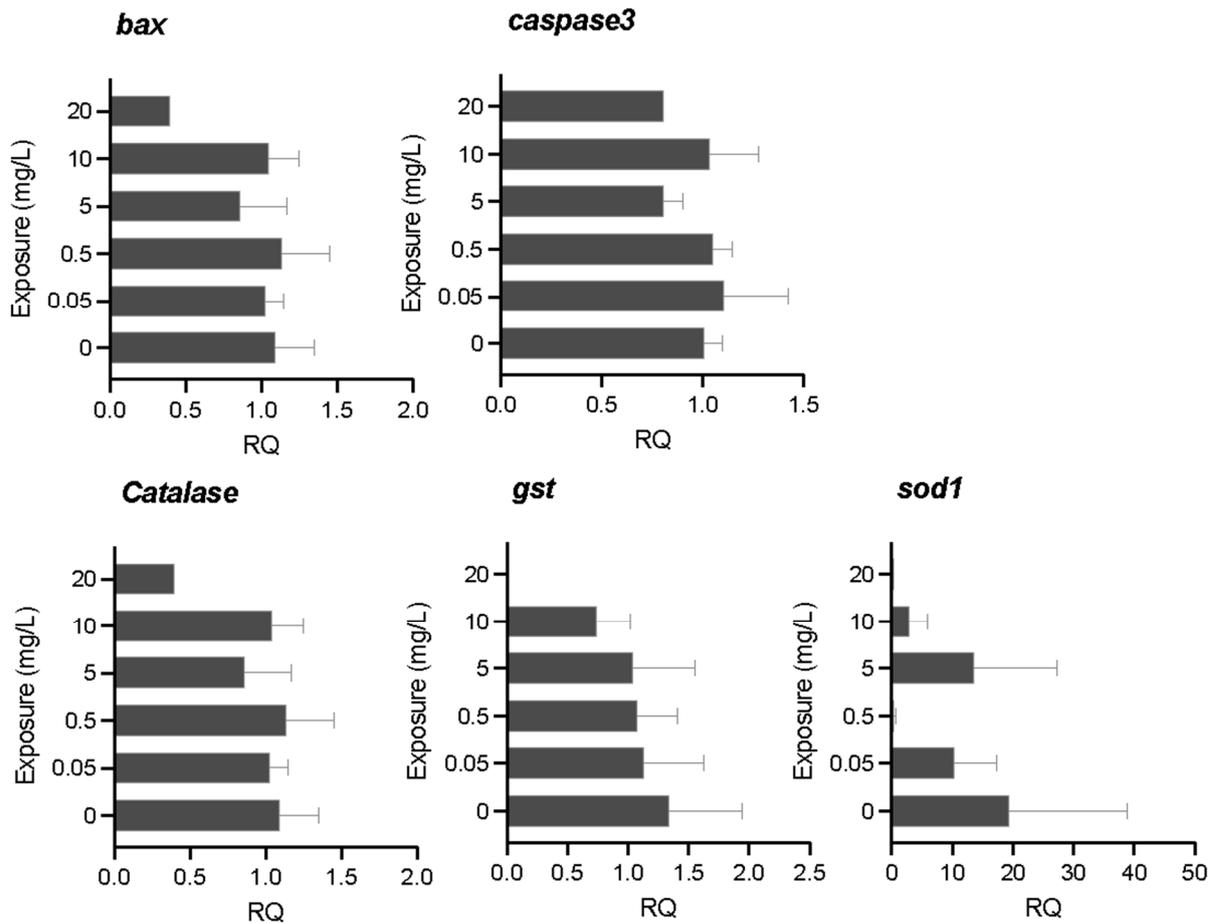

Figure S1. Expression of genes encoding *bax1*, *caspase3*, *catalase*, *gst*, and *sod1* in the whole larvae of medaka exposure to various concentrations of glyphosate in commercially available Roundup formulation. The mRNA levels were determined by real-time quantitative PCR using the primers shown in Table S1. No statistical significance was observed, although effects tended to be profound in larvae exposed to 20 mg/L of glyphosate.
