Table S1. Weighted and normalised life cycle impact assessments (LCIA) in resource depletion, climate change, ecosystem quality and human health of food choices (in millipoints per kg) using IMPACT 2002+ V2.12 LCIA methodology [29,30]. “The unit “points” is assigned to the results of the multiplication of the weighted damage factors with the inventory flows.” “Alloc Def, S” indicates allocation of the whole system at the point of substitution. “GLO” stands for global datasets. “market for” includes all stages of life cycle including product logistics before the use phase.
