Main open points from survey:

1. Is CER 160605 adequate for an appropriate recovery and disposal of LIBs?
2. If not, which are the main critical issues identified?
3. Is it possible to quantify the flow of lithium-ion batteries waste managed by the collection scheme in the last year?
4. Does any of your members carry out a sorting process with the purpose of a “second life”?
5. According to your experiences, are the disposal and recovery processes of lithium-ion batteries waste adequate in Italy?
6. If not, which are the main critical issues identified?
7. Among all the collected waste, do you have any estimation about how much of it is exported? Mainly, to which recycling plants?
