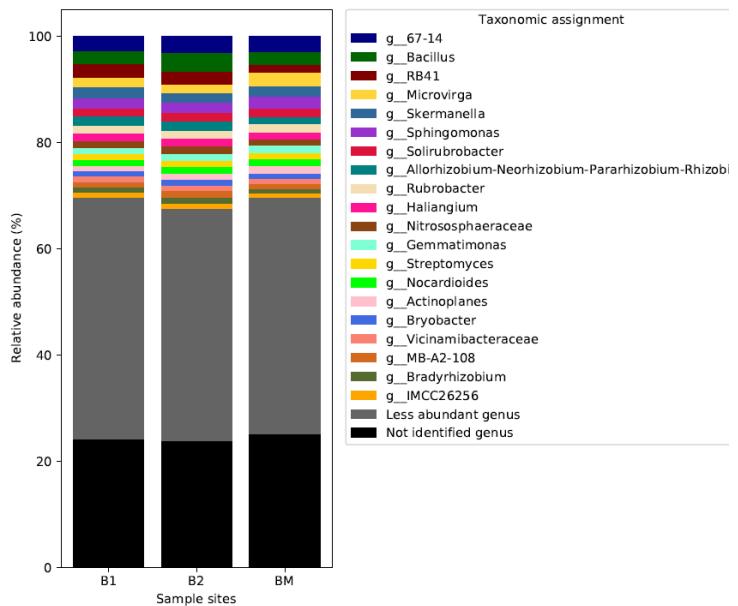

Figure S1. Average of relative abundance at genera taxonomic levels in the total bacterial community associated with the common bean rhizosphere under different service crop treatments: B1 = *B. brizantha*/common bean; B2 = *B. brizantha/B. brizantha*/common bean; BM = common bean monoculture (control). Relative abundances are based on the proportional frequencies of the ASV that could be classified at the genera levels, and are related to the total ASV identified in the samples.

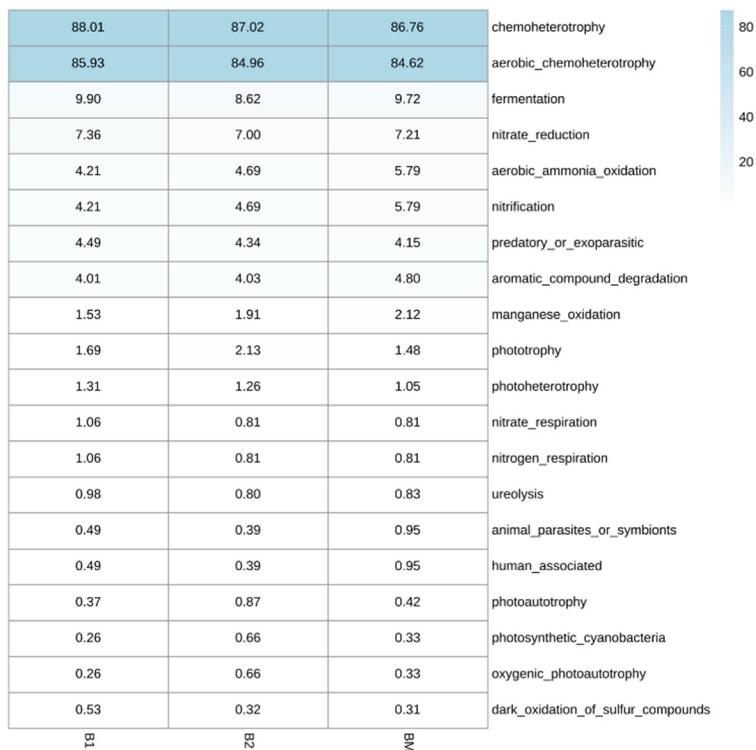

Figure S2. Functional groups of bacteria based on FAPROTAX database. B1 = *B. brizantha*/common bean; B2 = *B. brizantha/B. brizantha*/common bean; BM = common bean monoculture.
