

Supplement Figure S1. Cell viability of A375, WM266-4 and M21 after Ole glucoside (Ole) treatment. (a) Dose response of cell viability assessed by MTT assay after 72 h of Ole treatment; (b) Detection of Ole and its metabolites in A375 melanoma cells after 15 minutes of Ole treatment by Mass Spectrometry. * $p \leq 0.05$ vs UT (=untreated).

Supplement Figure S2. Effects of Ole on A375 melanoma cells.

(a) Dose-time response evaluated by MTT assay; (b) (Left) Melanoma cells apoptosis after 250 ($\approx 125 \mu\text{g/mL}$) or 500 μM ($\approx 250 \mu\text{g/mL}$) Ole treatment for 24 and 48h, analyzed by FACS through cellular incorporation of PI and Annexin V-FITC; (Right) Quantitative data; (c) (Upper) Western blot analysis of PARP1 and cleaved PARP1 from cells treated 24 or 48h with 250 or 500 μM Ole; (Lower) Densitometric quantification of cleaved PARP1 protein expression relative to β -Tubulin (d) Time-dependent increase of cell number in the presence of 250 μM Ole; (e) Western blot analysis of pAKT, AKT, pS6, S6, pERK and ERK from cells treated with 250 μM Ole for 48h. (Right) Densitometric quantification of the

ratio of pAKT/AKT, pERK/ERK, pS6/S6 relative to β -Tubulin expression; (f) Invasiveness of melanoma cells after 250 μ M Ole treatment for 24h. Invasive assay was performed using filters coated with matrigel. 25 μ M Ilomastat treatment was used as positive control for the inhibition of metalloprotease activity. Migration reduction level was expressed as a percentage of UT. * $p \leq 0.05$ vs UT (=untreated).

	mg/g dry extract powder
Hydroxytyrosol	6.59
Tyrosol and derivatives	2.58
Verbascoside and derivatives	5.72
Flavonols	19.23
Oleuropein glucoside	410.27
Oleuropein aglycone	75.48
Total polyphenols	519.87

Supplement Figure S3. Quali-quantitative data of dry extract powder obtained by Olea green leaves extract.

Data are presented as the mean of three determinations (standard deviation < 3%) and expressed in mg/g dry extract powder.

	mM extract powder solution	% composition
Hydroxytyrosol	0,523	4.16%
Tyrosol and derivatives	0,345	2.74%
Verbascoside and derivvatives	0,057	0.45 %
Flavonols	0,353	2.81 %
Oleuropein glucoside	8,994	71.47%
Oleuropein	2,312	18.37%
Total polyphenols	12,584	100 %

Supplement Figure S4. Quali-quantitative data of solution used for the test in vitro.

Data are presented as the mean of three determinations (standard deviation < 3%) and expressed as percentage of mg/g dry extract powder.
