

ONLINE SUPPORTING MATERIAL

Candidate gene and genome-wide association studies for circulating leptin levels

reveal population and sex-specific associations in high cardiovascular risk

Mediterranean subjects

Carolina Ortega-Azorín, Oscar Coltell, Eva M. Asensio, Jose V. Sorlí, José I. González,
Olga Portolés, Carmen Saiz, Ramon Estruch, Judith B Ramírez-Sabio, Alejandro Pérez-
Fidalgo, Jose M Ordovás and Dolores Corella

Chr: Chromosome.

¹ Single Nucleotide Polymorphism (SNP)s reported by Kilpeläin et al [37].

² Tested SNPs in this population (n=966 men and women). These SNPs are the original SNPs or proxies ($r^2 > 0.8$).

³ Model 3, GLM adjusted for sex, age and BMI. Beta: Indicates the regression coefficients per one minor allele.

Supplemental Table 2. Association of candidate SNPs with plasma Leptin concentrations (ln), additionally adjusted for BMI and stratified by men and women.

¹ SNP: Single Nucleotide Polymorphisms. Only top-ranked SNPs with P-value < 0.05 are listed. MAF: Minor allele frequency. BMI: Body Mass Index. Beta: Indicates the regression coefficients per one minor allele (leptin concentrations are expressed as ln of ng/mL). ² P-value obtained for the interaction term SNP*Sex in the corresponding hierarchical GLM regression model including the main effects. Beta³: indicates the regression coefficients for men (n=351). Beta⁴: indicates the regression coefficients for women (n=615).

Supplemental Figure 1. Linkage disequilibrium (LD) plots (r^2 values) for the statistically significant SNPs in the: (a) FTO and (b) LEPR genes in the whole population (n=966).

Supplemental Figure 2. Q-Q plot for the GWAS on plasma leptin concentrations in the whole population (n=966).

Supplemental Table 4. GWAS results for the association between the top-ranked SNPs and plasma leptin concentrations (ln) adjusted for sex, age and BMI in the whole population.

¹ Single Nucleotide Polymorphisms for this population (n=615). Only top-ranked SNPs with *P-value* < 5.00x10⁻⁵ are listed. MAF: Minor allele frequency. BMI: Body Mass Index. Beta: Indicates the regression coefficients per one minor allele (leptin concentrations expressed as ln of ng/mL). ² Model 1, unadjusted general lineal model (GLM). SNPs were tested in and additive model (0, 1 or 2 minor alleles). ³ Model 2, general lineal model (GLM) adjusted for sex and age. ⁴ Model 3, Model 2 adjusted for BMI.
