

Supplementary Figure S1. Score plots of PCA and OPLS-DA of all groups and pairwise OPLS-DA between groups and corresponding permutation tests of liver when offspring grew to 11 months old. n=8 ~ 10 rats/group.

Supplementary Figure S2. Metabolic pathway enrichment maps of liver of offspring at 11 months old based on changed metabolites between GDM offspring vs Control offspring

Supplementary Figure S3. Effect of n-3 PUFA on body weight of gestational diabetes mellitus (GDM) offspring. Bars are mean \pm SD. n=8 ~ 12 offspring rats/group. *P<0.05, **P<0.01, vs Control offspring (Con); #P<0.05, vs GDM offspring (GDM); \$P<0.05, vs n-3 Adequate-GDM offspring (n-3 Adq-GDM).

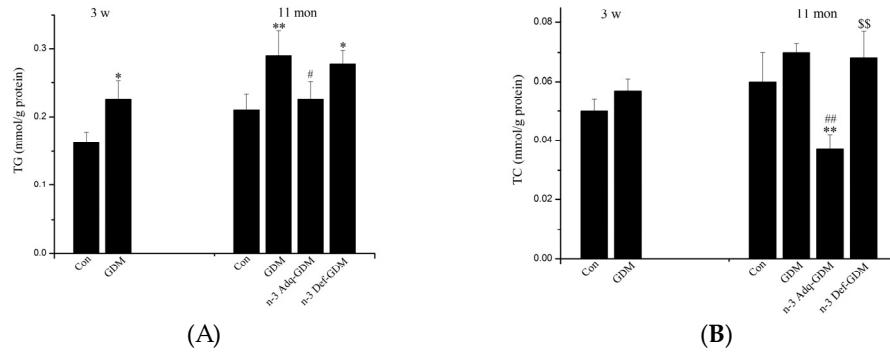

Supplementary Figure S4. Effect of n-3 PUFA on TG and TC in liver of gestational diabetes mellitus

(GDM) offspring. (A) TG; (B) TC. Bars are mean \pm SD. n=8 ~ 10 offspring rats/group. *P<0.05,

**P<0.01, vs Control offspring (Con); #P<0.05, ##P<0.01, vs GDM offspring (GDM); §§P<0.01, vs

n-3 Adequate-GDM offspring (n-3 Adq-GDM).

Supplementary Table S1. R²Y and Q²Y of pairwise OPLS-DA model.

	GDM vs. Con	n-3 Adq-GDM vs. GDM	n-3 Def-GDM vs. GDM
Liver	R ² Y:0.88, Q ² Y:0.79	R ² Y:0.94, Q ² Y:0.88	R ² Y:0.97, Q ² Y:0.93

Supplementary Table S2. Metabolites altered in liver of GDM offspring at 11 months old and modulating effects of n-3 PUFA.

Identification	RT (Min)	m/z	Change trend		
			GDM vs Con	n-3adq vs GDM	n-3def vs GDM

The “↑” and “↓” arrows represent a significant increasing or decreasing trend of metabolites of GDM offspring.
 Green arrows show modulating effect on altered metabolites, and the red shows aggravating result. “-” means no significant change. *P<0.05, **P<0.01, vs GDM offspring.
