**Table S1.** Bone mineral content (BMC) of 38, 48 and 58 days mice fed different levels of XOS (Mean values and standard errors;  $n = 8$  in each group).

SE, standard error; BMC, bone mineral content <sup>a,b</sup>Mean values with unlike superscript letters within the same row are significantly different ( $p < 0.05$ ; Tukey *post hoc* test). no letter = no significance.
