

**Figure S1.** Illustrative urinary proton NMR spectra from: a male with alcoholic cirrhosis, Child Pugh A, MELD 9 (a,e) at day 0 and (b,f) six month after placebo supplementation; and male with alcoholic cirrhosis, Child Pugh A, MELD 12 (c,g) at baseline and (d,h) six month after LcS supplementation. Each NMR spectrum is scaled independently and (a-d) shows the aliphatic region 0.5-4.5 ppm and (e-h) displays the aromatic region 6.5-9.5 ppm.

| Laboratory Parameter                  |         | Placebo (Median(IQR))   | LcS (Median(IQR))       | p value |
|---------------------------------------|---------|-------------------------|-------------------------|---------|
| Haemoglobin (g/dL)                    | Day 0   | 14.30 (13.00- 15.10)    | 13.60 (12.40- 14.70)    | 0.16    |
|                                       | Month 1 | 14.30 (13.30- 15.10)    | 13.55 (12.15- 14.55)    | 0.08    |
|                                       | Month 6 | 14.20 (13.00- 15.00)    | 13.45 (12.20- 15.10)    | 0.36    |
| Leucocyte Count (10 <sup>9</sup> /L)  | Day 0   | 5.80 (4.72- 7.37)       | 5.88 (4.70- 7.30)       | 0.88    |
|                                       | Month 1 | 5.60 (4.52- 6.70)       | 6.05 (4.56- 6.91)       | 0.77    |

## Supplementary Methods

## Analysis of neutrophil oxidative burst and phagocytosis

Phagoburst and Phagotest (BD Biosciences) kits were used to analyse oxidative burst and phagocytosis of neutrophils, respectively. Neutrophils isolated by Polymorphprep<sup>TM</sup> (Alere) were corrected to a concentration of  $1\times10^{7}$ /ml, and treated either with healthy or patient plasma for 90 minutes. Neutrophils were further stimulated with PBS (untreated), unlabelled opsonized bacteria (*E.coli*), labelled opsonized bacteria, N-formyl-Met-Leu-Phe (fMLP) and phorbol 12-myristate 13-acetate (PMA) for 20 minutes before analysis by flow cytometry using BD LSRFortessa<sup>TM</sup>(BD Biosciences). Data from flow cytometry was analysed using FlowJo® 9.9.6 (BD). Neutrophil geometric mean fluorescent intensities (GMFI) were calculated from FSC/SSC high granulocyte populations expressing CD16 and CD11b.
